(54) Title: PYRIMIDINONES AS FACTOR XIA INHIBITORS

(57) **Abstract:** The present invention provides compounds of Formula (I) or stereoisomers, tautomers, or pharmaceutically acceptable salts thereof, wherein all the variables are as defined herein. These compounds are selective factor Xa inhibitors or dual inhibitors of FXa and plasma kallikrein. This invention also relates to pharmaceutical compositions comprising these compounds and methods of treating thromboembolic and/or inflammatory disorders using the same.

BZ, CA, CH, CL, CN, CO, CR, CU, CZ, DE, DK, DM, DO, DZ, EC, EE, EG, ES, FI, GB, GD, GE, GH, GM, GT, HN, HR, HU, ID, IL, IN, IR, IS, JP, KE, KG, KN, KP, KR, KZ, LA, LC, LK, LR, LS, LU, LY, MA, MD, ME, MG, MK, MN, MW, MX, MY, MZ, NA, NG, NI, NO, NZ, OM, PA, PE, PG, PH, PL, PT, QA, RO, RS, RU, RW, SA, SC, SD, SE, SG, SK, SL, SM, ST, SV, SY, TH, TJ, TM, TN, TR, TT, TZ, UA, UG, US, UZ, VC, VN, ZA, ZM, ZW.

## PYRIMIDINONES AS FACTOR XIA INHIBITORS

## FIELD OF THE INVENTION

The present invention relates generally to novel macrocyclic compounds, and  
5 their analogues thereof, which are inhibitors of factor XIa and/or plasma kallikrein, compositions containing them, and methods of using them, for example, for the treatment or prophylaxis of thromboembolic disorders, or for the treatment of retinal vascular permeability associated with diabetic retinopathy and diabetic macular edema.

10

## BACKGROUND OF THE INVENTION

Thromboembolic diseases remain the leading cause of death in developed countries despite the availability of anticoagulants such as warfarin (COUMADIN®), heparin, low molecular weight heparins (LMWH), and synthetic pentasaccharides and antiplatelet agents such as aspirin and clopidogrel (PLAVIX®). The oral anticoagulant  
15 warfarin, inhibits the post-translational maturation of coagulation factors VII, IX, X and prothrombin, and has proven effective in both venous and arterial thrombosis. However, its usage is limited due to its narrow therapeutic index, slow onset of therapeutic effect, numerous dietary and drug interactions, and a need for monitoring and dose adjustment. Thus discovering and developing safe and efficacious oral anticoagulants for the  
20 prevention and treatment of a wide range of thromboembolic disorders has become increasingly important.

One approach is to inhibit thrombin generation by targeting the inhibition of coagulation factor XIa (FXIa). Factor XIa is a plasma serine protease involved in the regulation of blood coagulation, which is initiated *in vivo* by the binding of tissue factor  
25 (TF) to factor VII (FVII) to generate factor VIIa (FVIIa). The resulting TF:FVIIa complex activates factor IX (FIX) and factor X (FX) that leads to the production of factor Xa (FXa). The generated FXa catalyzes the transformation of prothrombin into small amounts of thrombin before this pathway is shut down by tissue factor pathway inhibitor (TFPI). The process of coagulation is then further propagated via the feedback activation  
30 of Factors V, VIII and XI by catalytic amounts of thrombin. (Gailani, D. et al., *Arterioscler. Thromb. Vasc. Biol.*, 27:2507-2513 (2007).) The resulting burst of thrombin converts fibrinogen to fibrin that polymerizes to form the structural framework of a blood

clot, and activates platelets, which are a key cellular component of coagulation (Hoffman, M., *Blood Reviews*, 17:S1-S5 (2003)). Therefore, factor XIa plays a key role in propagating this amplification loop and is thus an attractive target for anti-thrombotic therapy.

5 Plasma prekallikrein is a zymogen of a trypsin-like serine protease and is present in plasma at 35 to 50 µg/mL. The gene structure is similar to that of factor XI. Overall, the amino acid sequence of plasma kallikrein has 58% homology to factor XI. Plasma kallikrein is thought to play a role in a number of inflammatory disorders. The major inhibitor of plasma kallikrein is the serpin C1 esterase inhibitor. Patients who present 10 with a genetic deficiency in C1 esterase inhibitor suffer from hereditary angioedema (HAE) which results in intermittent swelling of face, hands, throat, gastro-intestinal tract and genitals. Blisters formed during acute episodes contain high levels of plasma kallikrein which cleaves high molecular weight kininogen liberating bradykinin leading to increased vascular permeability. Treatment with a large protein plasma kallikrein 15 inhibitor has been shown to effectively treat HAE by preventing the release of bradykinin which causes increased vascular permeability (Lehmann, A., "Ecallantide (DX-88), a plasma kallikrein inhibitor for the treatment of hereditary angioedema and the prevention of blood loss in on-pump cardiothoracic surgery", *Expert Opin. Biol. Ther.*, 8:187-199 (2008)).

20 The plasma kallikrein-kinin system is abnormally abundant in patients with advanced diabetic macular edema. It has been recently published that plasma kallikrein contributes to retinal vascular dysfunctions in diabetic rats (Clermont, A. et al., "Plasma kallikrein mediates retinal vascular dysfunction and induces retinal thickening in diabetic rats", *Diabetes*, 60:1590-1598 (2011)). Furthermore, administration of the plasma 25 kallikrein inhibitor ASP-440 ameliorated both retinal vascular permeability and retinal blood flow abnormalities in diabetic rats. Therefore, a plasma kallikrein inhibitor should have utility as a treatment to reduce retinal vascular permeability associated with diabetic retinopathy and diabetic macular edema. Other complications of diabetes such as cerebral hemorrhage, nephropathy, cardiomyopathy and neuropathy, all of which have 30 associations with plasma kallikrein may also be considered as targets for a plasma kallikrein inhibitor.

To date, no small molecule synthetic plasma kallikrein inhibitor has been approved for medical use. The large protein plasma kallikrein inhibitors present risks of anaphylactic reactions, as has been reported for Ecallantide. Thus there remains a need for compounds that inhibit plasma kallikrein, that do not induce anaphylaxis and that are orally available. Furthermore, the molecules in the known art feature a highly polar and ionizable guanidine or amidine functionality. It is well known that such functionalities may be limiting to gut permeability and therefore to oral availability.

#### SUMMARY OF THE INVENTION

10 The present invention provides novel macrocyclic compounds, their analogues, including stereoisomers, tautomers, pharmaceutically acceptable salts, or solvates thereof, which are useful as selective inhibitors of serine protease enzymes, especially factor XIa and/or plasma kallikrein.

15 The present invention also provides processes and intermediates for making the compounds of the present invention.

The present invention also provides pharmaceutical compositions comprising a pharmaceutically acceptable carrier and at least one of the compounds of the present invention or stereoisomers, tautomers, pharmaceutically acceptable salts, or solvates thereof.

20 The compounds of the invention may be used in the treatment and/or prophylaxis of thromboembolic disorders.

The compounds of the invention may be used in the treatment of retinal vascular permeability associated with diabetic retinopathy and diabetic macular edema.

The compounds of the present invention may be used in therapy.

25 The compounds of the present invention may be used for the manufacture of a medicament for the treatment and/or prophylaxis of a thromboembolic disorder.

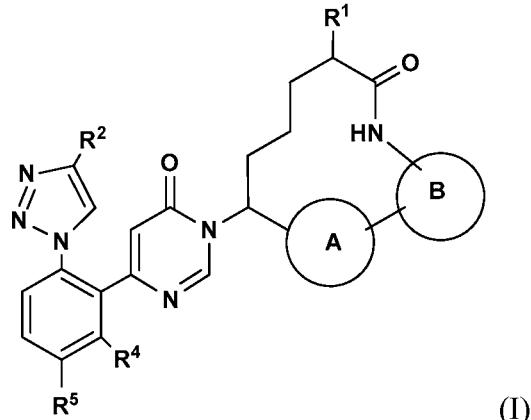

The compounds of the invention can be used alone, in combination with other compounds of the present invention, or in combination with one or more, preferably one to two other agent(s).

30 These and other features of the invention will be set forth in expanded form as the disclosure continues.

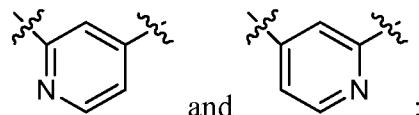

## DETAILED DESCRIPTION OF THE INVENTION

## I. COMPOUNDS OF THE INVENTION

In one aspect, the present invention provides, inter alia, compounds of Formula 5 (I):

or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

ring A is independently selected from

ring B is independently selected from

$R^3$  and ;

$R^1$  is independently selected from H and  $C_{1-4}$  alkyl;

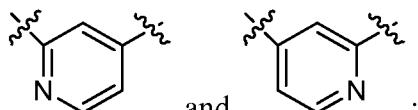

$R^2$  is independently selected from H, F, Cl,  $CF_3$ , and  $CHF_2$ ;

$R^3$  is independently selected from H,  $CHF_2$ ,  $CD_3$ ,  $CH_3$ , and ;

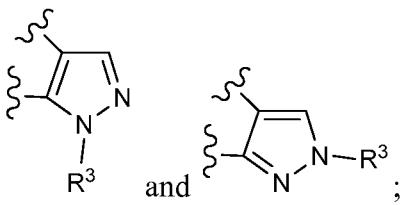

$R^4$  is independently selected from H and F; and

$R^5$  is independently selected from H, F, Cl,  $CH_3$ , and  $OCH_3$ .

In another aspect, the present invention provides compounds of Formula (I), or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

ring A is independently selected from

ring B is independently selected from

R<sup>1</sup> is independently selected from H and C<sub>1-4</sub> alkyl;

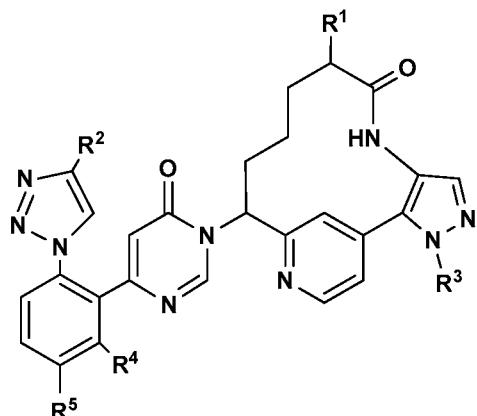

R<sup>2</sup> is independently selected from F, Cl, CF<sub>3</sub>, CHF<sub>2</sub>, and COOH;

5 R<sup>3</sup> is independently selected from H, CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;

R<sup>4</sup> is independently selected from H and F; and

R<sup>5</sup> is independently selected from H, F, Cl, CH<sub>3</sub>, and OCH<sub>3</sub>.

In another aspect, the present invention provides compounds of Formula (II):

10 (II)

or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

R<sup>1</sup> is C<sub>1-4</sub> alkyl;

R<sup>2</sup> is independently selected from H, F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>;

15 R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;

R<sup>4</sup> is H; and

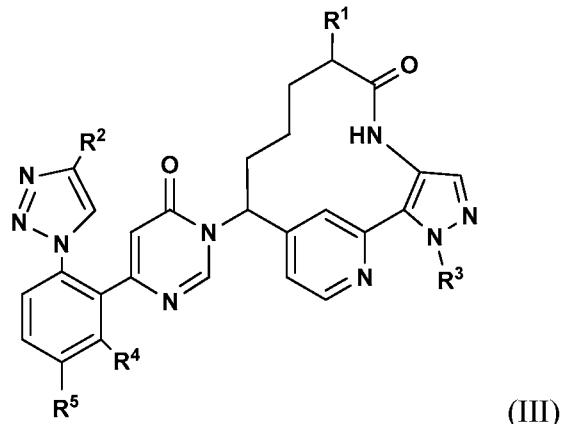

R<sup>5</sup> is independently selected from F and Cl.

In another aspect, the present invention provides compounds of Formula (II), or

20 stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

- R<sup>1</sup> is C<sub>1-4</sub> alkyl;
- R<sup>2</sup> is independently selected from F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>;
- R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;
- R<sup>4</sup> is H; and
- 5 R<sup>5</sup> is independently selected from F and Cl.

In another aspect, the present invention provides compounds of Formula (III):

or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs

10 thereof, wherein:

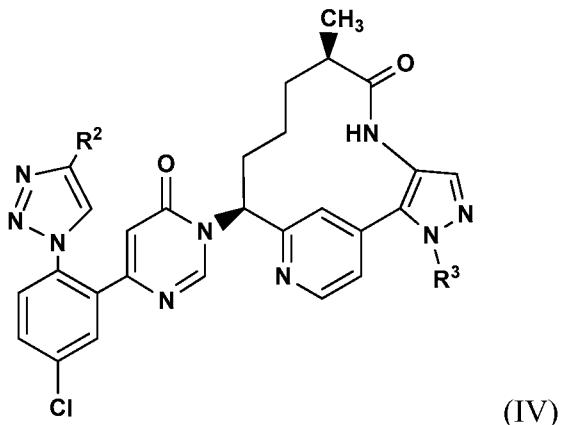

- R<sup>1</sup> is C<sub>1-4</sub> alkyl;
- R<sup>2</sup> is independently selected from H, F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>;
- R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;
- R<sup>4</sup> is H; and
- 15 R<sup>5</sup> is independently selected from F and Cl.

In another aspect, the present invention provides compounds of Formula (III), or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

- 20 R<sup>1</sup> is C<sub>1-4</sub> alkyl;
- R<sup>2</sup> is independently selected from F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>;
- R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;
- R<sup>4</sup> is H; and
- R<sup>5</sup> is independently selected from F and Cl.

25

In another aspect, the present invention provides compounds of Formula (IV):

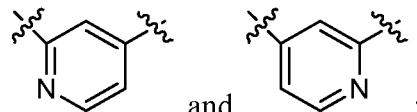

or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof, wherein:

5      R<sup>2</sup> is independently selected from F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>; and

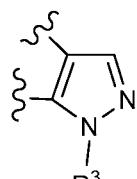

R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>.

In another aspect, the present invention provides compounds of Formula (I), or stereoisomers, tautomers, pharmaceutically acceptable salts, solvates, or prodrugs thereof,

10     wherein:

ring A is independently selected from

ring B is R<sup>3</sup>;

R<sup>1</sup> is independently selected from H and C<sub>1-4</sub> alkyl;

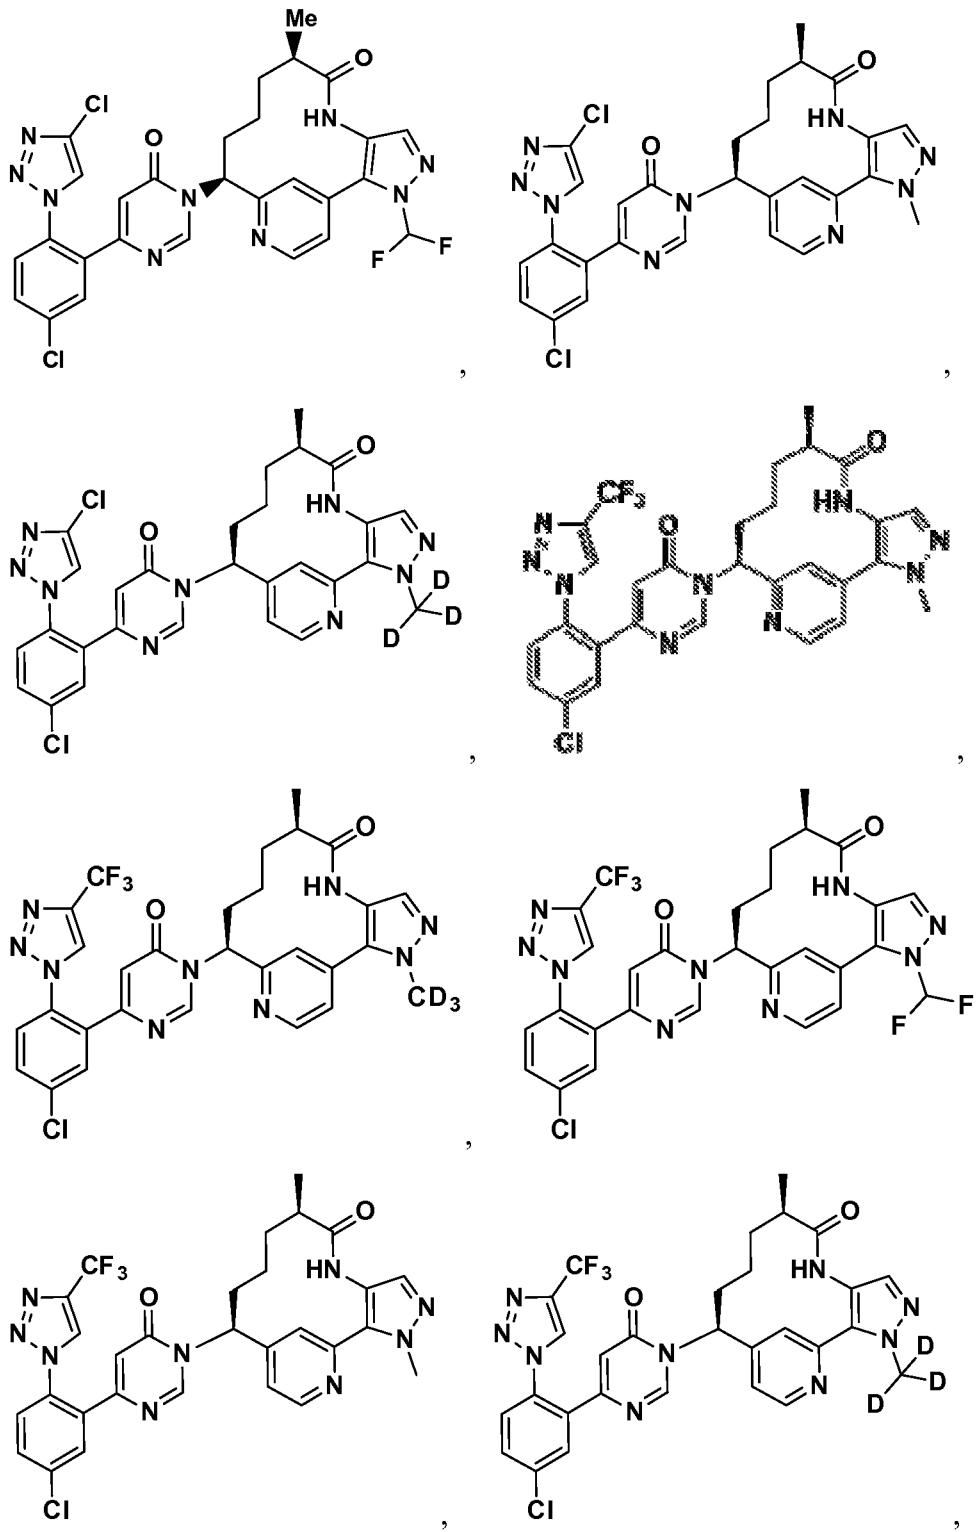

R<sup>2</sup> is COOH;

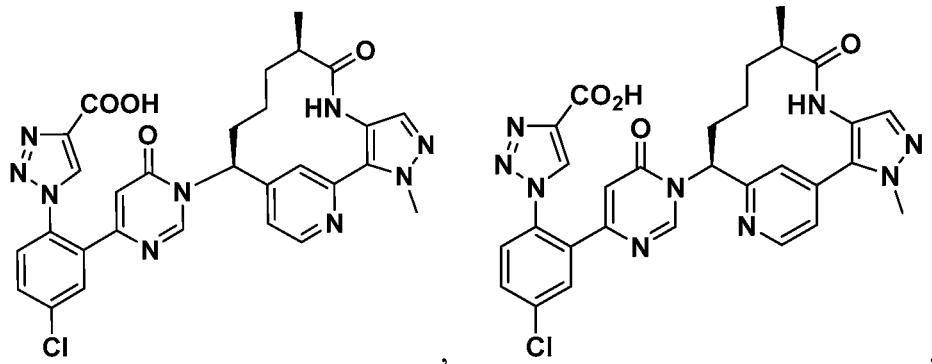

15     R<sup>3</sup> is independently selected from H, CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>;

R<sup>4</sup> is independently selected from H and F; and

R<sup>5</sup> is independently selected from H, F, Cl, CH<sub>3</sub>, and OCH<sub>3</sub>.

In another aspect, the present invention provides compounds selected from

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, solvates, or prodrugs thereof.

5 In another embodiment, R<sup>1</sup> is independently selected from the group consisting of H and C<sub>1-4</sub> alkyl.

In another embodiment, R<sup>1</sup> is independently selected from the group consisting of H and methyl, ethyl, and isopropyl.

10 In another aspect, the present invention provides a compound selected from any subset list of compounds exemplified in the present application.

In another embodiment, the compounds of the present invention have Factor XIa or plasma kallikrein Ki values ≤ 10 μM.

In another embodiment, the compounds of the present invention have Factor XIa or plasma kallikrein Ki values ≤ 1 μM.

15 In another embodiment, the compounds of the present invention have Factor XIa or plasma kallikrein Ki values ≤ 0.5 μM.

In another embodiment, the compounds of the present invention have Factor XIa or plasma kallikrein Ki values ≤ 0.1 μM.

## 20 II. OTHER EMBODIMENTS OF THE INVENTION

In another embodiment, the present invention provides a composition comprising at least one of the compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof.

25 In another embodiment, the present invention provides a pharmaceutical composition comprising a pharmaceutically acceptable carrier and at least one of the

compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate, thereof.

In another embodiment, the present invention provides a pharmaceutical composition, comprising: a pharmaceutically acceptable carrier and a therapeutically effective amount of at least one of the compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof.

5 In another embodiment, the present invention provides a process for making a compound of the present invention.

In another embodiment, the present invention provides an intermediate for making a compound of the present invention.

10 In another embodiment, the present invention provides a pharmaceutical composition further comprising additional therapeutic agent(s). In a preferred embodiment, the present invention provides pharmaceutical composition, wherein the additional therapeutic agent(s) are an anti-platelet agent or a combination thereof.

15 Preferably, the anti-platelet agent(s) are clopidogrel and/or aspirin, or a combination thereof.

In another embodiment, the present invention provides a method for the treatment and/or prophylaxis of a thromboembolic disorder comprising administering to a patient in need of such treatment and/or prophylaxis a therapeutically effective amount of at least 20 one of the compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof.

In another embodiment, the present invention provides a compound of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof, for use in therapy.

25 In another embodiment, the present invention provides a compound of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof, for use in therapy for the treatment and/or prophylaxis of a thromboembolic disorder.

In another embodiment, the present invention also provides the use of a 30 compound of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof, for the manufacture of a medicament for the treatment and/or prophylaxis of a thromboembolic disorder.

In another embodiment, the present invention provides a method for treatment and/or prophylaxis of a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount of a first and second therapeutic agent, wherein the first therapeutic agent is a compound of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof, and the second therapeutic agent is at least one agent selected from a factor Xa inhibitor such as apixaban, rivaroxaban, betrixaban, edoxaban, an anti-coagulant agent, an anti-platelet agent, a thrombin inhibiting agent such as dabigatran, a thrombolytic agent, and a fibrinolytic agent. Preferably, the second therapeutic agent is at least one agent selected from warfarin, unfractionated heparin, low molecular weight heparin, synthetic pentasaccharide, hirudin, argatroban, aspirin, ibuprofen, naproxen, sulindac, indomethacin, mefenamate, droxicam, diclofenac, sulfinpyrazone, piroxicam, ticlopidine, clopidogrel, tirofiban, eptifibatide, abciximab, melagatran, desulfatohirudin, tissue plasminogen activator, modified tissue plasminogen activator, anistreplase, urokinase, and streptokinase. Preferably, the second therapeutic agent is at least one anti-platelet agent. Preferably, the anti-platelet agent(s) are clopidogrel and/or aspirin, or a combination thereof.

The thromboembolic disorder includes arterial cardiovascular thromboembolic disorders, venous cardiovascular thromboembolic disorders, arterial cerebrovascular thromboembolic disorders, and venous cerebrovascular thromboembolic disorders. Examples of the thromboembolic disorder include, but are not limited to, unstable angina, an acute coronary syndrome, atrial fibrillation, first myocardial infarction, recurrent myocardial infarction, ischemic sudden death, transient ischemic attack, stroke, atherosclerosis, peripheral occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface that promotes thrombosis.

In another embodiment, the present invention provides a method for the treatment and/or prophylaxis of an inflammatory disorder comprising: administering to a patient in need of such treatment and/or prophylaxis a therapeutically effective amount of at least one of the compounds of the present invention or a stereoisomer, a tautomer, a

pharmaceutically acceptable salt, or a solvate thereof. Examples of the inflammatory disorder include, but are not limited to, sepsis, acute respiratory distress syndrome, and systemic inflammatory response syndrome.

5 In another embodiment, the present invention provides a method for the prophylaxis of a disease or condition in which plasma kallikrein activity is implicated comprising administering to a patient in need of such treatment and/or prophylaxis a therapeutically effective amount of at least one of the compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof.

10 The disease or condition in which plasma kallikrein activity is implicated includes, but not limited to, impaired visual acuity, diabetic retinopathy, diabetic macular edema, hereditary angioedema, diabetes, pancreatitis, nephropathy, cardio myopathy, neuropathy, inflammatory bowel disease, arthritis, inflammation, septic shock, hypotension, cancer, adult respiratory distress syndrome, disseminated intravascular coagulation, and cardiopulmonary bypass surgery.

15 In another embodiment, the present invention provides a combined preparation of a compound of the present invention and additional therapeutic agent(s) for simultaneous, separate or sequential use in therapy.

20 In another embodiment, the present invention provides a combined preparation of a compound of the present invention and additional therapeutic agent(s) for simultaneous, separate or sequential use in treatment and/or prophylaxis of a thromboembolic disorder.

25 The present invention may be embodied in other specific forms without departing from the spirit or essential attributes thereof. This invention encompasses all combinations of preferred aspects of the invention noted herein. It is understood that any and all embodiments of the present invention may be taken in conjunction with any other embodiment or embodiments to describe additional embodiments. It is also to be understood that each individual element of the embodiments is its own independent embodiment. Furthermore, any element of an embodiment is meant to be combined with any and all other elements from any embodiment to describe an additional embodiment.

30 III. CHEMISTRY

Throughout the specification and the appended claims, a given chemical formula or name shall encompass all stereo and optical isomers and racemates thereof where such

isomers exist. Unless otherwise indicated, all chiral (enantiomeric and diastereomeric) and racemic forms are within the scope of the invention. Many geometric isomers of C=C double bonds, C=N double bonds, ring systems, and the like can also be present in the compounds, and all such stable isomers are contemplated in the present invention.

- 5    *Cis-* and *trans-* (or *E*- and *Z*-) geometric isomers of the compounds of the present invention are described and may be isolated as a mixture of isomers or as separated isomeric forms. The present compounds can be isolated in optically active or racemic forms. Optically active forms may be prepared by resolution of racemic forms or by synthesis from optically active starting materials. All processes used to prepare  
10 compounds of the present invention and intermediates made therein are considered to be part of the present invention. When enantiomeric or diastereomeric products are prepared, they may be separated by conventional methods, for example, by chromatography or fractional crystallization. Depending on the process conditions the end products of the present invention are obtained either in free (neutral) or salt form.  
15 Both the free form and the salts of these end products are within the scope of the invention. If so desired, one form of a compound may be converted into another form. A free base or acid may be converted into a salt; a salt may be converted into the free compound or another salt; a mixture of isomeric compounds of the present invention may be separated into the individual isomers. Compounds of the present invention, free form  
20 and salts thereof, may exist in multiple tautomeric forms, in which hydrogen atoms are transposed to other parts of the molecules and the chemical bonds between the atoms of the molecules are consequently rearranged. It should be understood that all tautomeric forms, insofar as they may exist, are included within the invention.

The term "stereoisomer" refers to isomers of identical constitution that differ in  
25 the arrangement of their atoms in space. Enantiomers and diastereomers are examples of stereoisomers. The term "enantiomer" refers to one of a pair of molecular species that are mirror images of each other and are not superimposable. The term "diastereomer" refers to stereoisomers that are not mirror images. The term "racemate" or "racemic mixture" refers to a composition composed of equimolar quantities of two enantiomeric species,  
30 wherein the composition is devoid of optical activity.

The symbols "R" and "S" represent the configuration of substituents around a chiral carbon atom(s). The isomeric descriptors "R" and "S" are used as described herein

for indicating atom configuration(s) relative to a core molecule and are intended to be used as defined in the literature (IUPAC Recommendations 1996, *Pure and Applied Chemistry*, 68:2193-2222 (1996)).

The term "chiral" refers to the structural characteristic of a molecule that makes it impossible to superimpose it on its mirror image. The term "homochiral" refers to a state of enantiomeric purity. The term "optical activity" refers to the degree to which a homochiral molecule or nonracemic mixture of chiral molecules rotates a plane of polarized light.

As used herein, the term "alkyl" or "alkylene" is intended to include both branched and straight-chain saturated aliphatic hydrocarbon groups having the specified number of carbon atoms. For example, "C<sub>1</sub> to C<sub>10</sub> alkyl" or "C<sub>1-10</sub> alkyl" (or alkylene), is intended to include C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>, C<sub>4</sub>, C<sub>5</sub>, C<sub>6</sub>, C<sub>7</sub>, C<sub>8</sub>, C<sub>9</sub>, and C<sub>10</sub> alkyl groups. Additionally, for example, "C<sub>1</sub> to C<sub>6</sub> alkyl" or "C<sub>1-C<sub>6</sub></sub> alkyl" denotes alkyl having 1 to 6 carbon atoms. Alkyl group can be unsubstituted or substituted with at least one hydrogen being replaced by another chemical group. Example alkyl groups include, but are not limited to, methyl (Me), ethyl (Et), propyl (e.g., n-propyl and isopropyl), butyl (e.g., n-butyl, isobutyl, t-butyl), and pentyl (e.g., n-pentyl, isopentyl, neopentyl). When "C<sub>0</sub> alkyl" or "C<sub>0</sub> alkylene" is used, it is intended to denote a direct bond.

"Alkynyl" or "alkynylene" is intended to include hydrocarbon chains of either straight or branched configuration having one or more, preferably one to three, carbon-carbon triple bonds that may occur in any stable point along the chain. For example, "C<sub>2</sub> to C<sub>6</sub> alkynyl" or "C<sub>2-6</sub> alkynyl" (or alkynylene), is intended to include C<sub>2</sub>, C<sub>3</sub>, C<sub>4</sub>, C<sub>5</sub>, and C<sub>6</sub> alkynyl groups; such as ethynyl, propynyl, butynyl, pentynyl, and hexynyl.

The term "alkoxy" or "alkyloxy" refers to an -O-alkyl group. "C<sub>1</sub> to C<sub>6</sub> alkoxy" or "C<sub>1-6</sub> alkoxy" (or alkyloxy), is intended to include C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>, C<sub>4</sub>, C<sub>5</sub>, and C<sub>6</sub> alkoxy groups. Example alkoxy groups include, but are not limited to, methoxy, ethoxy, propoxy (e.g., n-propoxy and isopropoxy), and t-butoxy. Similarly, "alkylthio" or "thioalkoxy" represents an alkyl group as defined above with the indicated number of carbon atoms attached through a sulphur bridge; for example, methyl-S- and ethyl-S-.

"Halo" or "halogen" includes fluoro, chloro, bromo, and iodo. "Haloalkyl" is intended to include both branched and straight-chain saturated aliphatic hydrocarbon groups having the specified number of carbon atoms, substituted with 1 or more

halogens. Examples of haloalkyl include, but are not limited to, fluoromethyl, difluoromethyl, trifluoromethyl, trichloromethyl, pentafluoroethyl, pentachloroethyl, 2,2,2-trifluoroethyl, heptafluoropropyl, and heptachloropropyl. Examples of haloalkyl also include "fluoroalkyl" that is intended to include both branched and straight-chain 5 saturated aliphatic hydrocarbon groups having the specified number of carbon atoms, substituted with 1 or more fluorine atoms.

"Haloalkoxy" or "haloalkyloxy" represents a haloalkyl group as defined above with the indicated number of carbon atoms attached through an oxygen bridge. For example, "C<sub>1</sub> to C<sub>6</sub> haloalkoxy" or "C<sub>1-6</sub> haloalkoxy", is intended to include C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>, 10 C<sub>4</sub>, C<sub>5</sub>, and C<sub>6</sub> haloalkoxy groups. Examples of haloalkoxy include, but are not limited to, trifluoromethoxy, 2,2,2-trifluoroethoxy, and pentafluorothoxy. Similarly, "haloalkylthio" or "thiohaloalkoxy" represents a haloalkyl group as defined above with the indicated number of carbon atoms attached through a sulphur bridge; for example, trifluoromethyl-S-, and pentafluoroethyl-S-.

15 The term "amino", as used herein, refers to -NH<sub>2</sub>.

The term "substituted amino", as used herein, refers to the defined terms below having the suffix "amino" such as "arylamino", "alkylamino", "arylamino", etc.

The term "alkoxycarbonyl", as used herein, refers to an alkoxy group attached to the parent molecular moiety through a carbonyl group.

20 The term "alkoxycarbonylamino", as used herein, refers to an -NHR wherein R is an alkoxycarbonyl group.

The term "alkylamino", as used herein, refers to -NHR, wherein R is an alkyl group.

25 The term "alkylcarbonyl", as used herein, refers to an alkyl group attached to the parent molecular moiety through a carbonyl group.

The term "alkylcarbonylamino", as used herein, refers to -NHR wherein R is an alkylcarbonyl group.

The term "aminosulfonyl", as used herein, refers to -SO<sub>2</sub>NH<sub>2</sub>.

30 The term "arylalkyl", as used herein, refers to an alkyl group substituted with one, two, or three aryl groups.

The term "arylamino", as used herein, refers to -NHR wherein R is an aryl group.

The term "arylcarbonyl", as used herein, refers to an aryl group attached to the parent molecular moiety through a carbonyl group.

The term "arylcarbonylamino", as used herein, refers to -NHR wherein R is an arylcarbonyl group.

5       The term "carbonyl", as used herein, refers to -C(O)-.

The term "cyano", as used herein, refers to -CN.

The term "cycloalkylamino", as used herein, refers to -NHR wherein R is a cycloalkyl group.

10      The term "cycloalkylcarbonyl", as used herein, refers to a cycloalkyl group attached to the parent molecular moiety through a carbonyl group.

The term "cycloalkylcarbonylamino", as used herein, refers to -NHR wherein R is a cycloalkylcarbonyl group.

The term "cycloalkyloxy", as used herein, refers to a cycloalkyl group attached to the parent molecular moiety through an oxygen atom.

15      The term "dialkylamino", as used herein, refers to NR<sub>2</sub>, wherein each R is an alkyl group. The two alkyl groups are the same or different.

The term "haloalkoxy", as used herein, refers to a haloalkyl group attached to the parent molecular moiety through an oxygen atom.

20      The term "haloalkyl", as used herein, refers to an alkyl group substituted by one, two, three, or four halogen atoms.

The term "haloalkylamino", as used herein, refers to -NHR wherein R is a haloalkyl group.

The term "carbonyl" refers to C(=O).

The term "carboxy" refers to C(=O)OH.

25      The term "haloalkylcarbonyl", as used herein, refers to a haloalkyl group attached to the parent molecular moiety through a carbonyl group.

The term "haloalkylcarbonylamino", as used herein, refers to -NHR wherein R is a haloalkylcarbonyl group.

30      The term "alkylcarbonyl" refers to an alkyl or substituted alkyl bonded to a carbonyl.

The term "alkoxycarbonyl", as used herein, refers to an alkoxy group attached to the parent molecular moiety through a carbonyl group.

The term "hydroxy" or "hydroxyl" refers to OH.

The term "cycloalkyl" refers to cyclized alkyl groups, including mono-, bi- or poly-cyclic ring systems. "C<sub>3</sub> to C<sub>7</sub> cycloalkyl" or "C<sub>3-7</sub> cycloalkyl" is intended to include C<sub>3</sub>, C<sub>4</sub>, C<sub>5</sub>, C<sub>6</sub>, and C<sub>7</sub> cycloalkyl groups. Example cycloalkyl groups include, but are not limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, and norbornyl. Branched cycloalkyl groups such as 1-methylcyclopropyl and 2-methylcyclopropyl are included in the definition of "cycloalkyl".

As used herein, "carbocycle" or "carbocyclic residue" is intended to mean any stable 3-, 4-, 5-, 6-, 7-, or 8-membered monocyclic or bicyclic or 7-, 8-, 9-, 10-, 11-, 12-, 10 or 13-membered bicyclic or tricyclic hydrocarbon ring, any of which may be saturated, partially unsaturated, unsaturated or aromatic. Examples of such carbocycles include, but are not limited to, cyclopropyl, cyclobutyl, cyclobutenyl, cyclopentyl, cyclopentenyl, cyclohexyl, cycloheptenyl, cycloheptyl, cycloheptenyl, adamantyl, cyclooctyl, cyclooctenyl, cyclooctadienyl, [3.3.0]bicyclooctane, [4.3.0]bicyclononane, 15 [4.4.0]bicyclodecane (decalin), [2.2.2]bicyclooctane, fluorenyl, phenyl, naphthyl, indanyl, adamantyl, anthracenyl, and tetrahydronaphthyl (tetralin). As shown above, bridged rings are also included in the definition of carbocycle (e.g., [2.2.2]bicyclooctane). Preferred carbocycles, unless otherwise specified, are cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, phenyl, and indanyl. When the term "carbocycle" is used, it is intended to 20 include "aryl". A bridged ring occurs when one or more carbon atoms link two non-adjacent carbon atoms. Preferred bridges are one or two carbon atoms. It is noted that a bridge always converts a monocyclic ring into a tricyclic ring. When a ring is bridged, the substituents recited for the ring may also be present on the bridge.

As used herein, the term "bicyclic carbocycle" or "bicyclic carbocyclic group" is 25 intended to mean a stable 9- or 10-membered carbocyclic ring system that contains two fused rings and consists of carbon atoms. Of the two fused rings, one ring is a benzo ring fused to a second ring; and the second ring is a 5- or 6-membered carbon ring which is saturated, partially unsaturated, or unsaturated. The bicyclic carbocyclic group may be attached to its pendant group at any carbon atom which results in a stable structure. The 30 bicyclic carbocyclic group described herein may be substituted on any carbon if the resulting compound is stable. Examples of a bicyclic carbocyclic group are, but not limited to, naphthyl, 1,2-dihydronaphthyl, 1,2,3,4-tetrahydronaphthyl, and indanyl.

"Aryl" groups refer to monocyclic or polycyclic aromatic hydrocarbons, including, for example, phenyl, naphthyl, and phenanthranyl. Aryl moieties are well known and described, for example, in Lewis, R.J., ed., *Hawley's Condensed Chemical Dictionary*, 13th Edition, John Wiley & Sons, Inc., New York (1997). "C<sub>6</sub> or C<sub>10</sub> aryl" or "C<sub>6-10</sub> aryl" refers to phenyl and naphthyl. Unless otherwise specified, "aryl", "C<sub>6</sub> or C<sub>10</sub> aryl" or "C<sub>6-10</sub> aryl" or "aromatic residue" may be unsubstituted or substituted with 1 to 5 groups, preferably 1 to 3 groups, OH, OCH<sub>3</sub>, Cl, F, Br, I, CN, NO<sub>2</sub>, NH<sub>2</sub>, N(CH<sub>3</sub>)H, N(CH<sub>3</sub>)<sub>2</sub>, CF<sub>3</sub>, OCF<sub>3</sub>, C(=O)CH<sub>3</sub>, SCH<sub>3</sub>, S(=O)CH<sub>3</sub>, S(=O)<sub>2</sub>CH<sub>3</sub>, CH<sub>3</sub>, CH<sub>2</sub>CH<sub>3</sub>, CO<sub>2</sub>H, and CO<sub>2</sub>CH<sub>3</sub>.

10 The term "benzyl" as used herein, refers to a methyl group on which one of the hydrogen atoms is replaced by a phenyl group, wherein said phenyl group may optionally be substituted with 1 to 5 groups, preferably 1 to 3 groups, OH, OCH<sub>3</sub>, Cl, F, Br, I, CN, NO<sub>2</sub>, NH<sub>2</sub>, N(CH<sub>3</sub>)H, N(CH<sub>3</sub>)<sub>2</sub>, CF<sub>3</sub>, OCF<sub>3</sub>, C(=O)CH<sub>3</sub>, SCH<sub>3</sub>, S(=O)CH<sub>3</sub>, S(=O)<sub>2</sub>CH<sub>3</sub>, CH<sub>3</sub>, CH<sub>2</sub>CH<sub>3</sub>, CO<sub>2</sub>H, and CO<sub>2</sub>CH<sub>3</sub>.

15 As used herein, the term "heterocycle" or "heterocyclic ring" is intended to mean a stable 3-, 4-, 5-, 6-, or 7-membered monocyclic or bicyclic or 7-, 8-, 9-, 10-, 11-, 12-, 13-, or 14-membered polycyclic heterocyclic ring that is saturated, partially unsaturated, or fully unsaturated, and that contains carbon atoms and 1, 2, 3 or 4 heteroatoms independently selected from the group consisting of N, O and S; and including any 20 polycyclic group in which any of the above-defined heterocyclic rings is fused to a benzene ring. The nitrogen and sulfur heteroatoms may optionally be oxidized (*i.e.*, N→O and S(O)<sub>p</sub>, wherein p is 0, 1 or 2). The nitrogen atom may be substituted or unsubstituted (*i.e.*, N or NR wherein R is H or another substituent, if defined). The heterocyclic ring may be attached to its pendant group at any heteroatom or carbon atom 25 that results in a stable structure. The heterocyclic rings described herein may be substituted on carbon or on a nitrogen atom if the resulting compound is stable. A nitrogen in the heterocycle may optionally be quaternized. It is preferred that when the total number of S and O atoms in the heterocycle exceeds 1, then these heteroatoms are not adjacent to one another. It is preferred that the total number of S and O atoms in the 30 heterocycle is not more than 1. When the term "heterocycle" is used, it is intended to include heteroaryl.

Examples of heterocycles include, but are not limited to, acridinyl, azetidinyl, azocinyl, benzimidazolyl, benzofuranyl, benzothiofuranyl, benzothiophenyl, benzoazazolyl, benzoxazolinyl, benzthiazolyl, benztriazolyl, benztetrazolyl, benzisoxazolyl, benzisothiazolyl, benzimidazolinyl, carbazolyl, 4a*H*-carbazolyl, 5 carbolinyl, chromanyl, chromenyl, cinnolinyl, decahydroquinolinyl, 2*H*,6*H*-1,5,2-dithiazinyl, dihydrofuro[2,3-*b*]tetrahydrofuran, furanyl, furazanyl, imidazolidinyl, imidazolinyl, imidazolyl, 1*H*-indazolyl, imidazolopyridinyl, indolenyl, indolinyl, indolizinyl, indolyl, 3*H*-indolyl, isatinoyl, isobenzofuranyl, isochromanyl, isoindazolyl, isoindolinyl, isoindolyl, isoquinolinyl, isothiazolyl, isothiazolopyridinyl, isoxazolyl, 10 isoxazolopyridinyl, methylenedioxophenyl, morpholinyl, naphthyridinyl, octahydroisoquinolinyl, oxadiazolyl, 1,2,3-oxadiazolyl, 1,2,4-oxadiazolyl, 1,2,5-oxadiazolyl, 1,3,4-oxadiazolyl, oxazolidinyl, oxazolyl, oxazolopyridinyl, oxazolidinylperimidinyl, oxindolyl, pyrimidinyl, phenanthridinyl, phenanthrolinyl, phenazinyl, phenothiazinyl, phenoxathiinyl, phenoazinyl, phthalazinyl, piperazinyl, 15 piperidinyl, piperidonyl, 4-piperidonyl, piperonyl, pteridinyl, purinyl, pyranyl, pyrazinyl, pyrazolidinyl, pyrazolinyl, pyrazolopyridinyl, pyrazolyl, pyridazinyl, pyridoazolyl, pyridoimidazolyl, pyridothiazolyl, pyridinyl, pyrimidinyl, pyrrolidinyl, pyrrolinyl, 2-pyrrolidonyl, 2*H*-pyrrolyl, pyrrolyl, quinazolinyl, quinolinyl, 4*H*-quinolizinyl, quinoxaliny, quinuclidinyl, tetrazolyl, tetrahydrofuran, tetrahydroisoquinolinyl, 20 tetrahydroquinolinyl, 6*H*-1,2,5-thiadiazinyl, 1,2,3-thiadiazolyl, 1,2,4-thiadiazolyl, 1,2,5-thiadiazolyl, 1,3,4-thiadiazolyl, thianthrenyl, thiazolyl, thienyl, thiazolopyridinyl, thienothiazolyl, thienooxazolyl, thienoimidazolyl, thiophenyl, triazinyl, 1,2,3-triazolyl, 1,2,4-triazolyl, 1,2,5-triazolyl, 1,3,4-triazolyl, and xanthenyl. Also included are fused ring and spiro compounds containing, for example, the above heterocycles.

25 Examples of 5- to 10-membered heterocycles include, but are not limited to, pyridinyl, furanyl, thienyl, pyrrolyl, pyrazolyl, pyrazinyl, piperazinyl, piperidinyl, imidazolyl, imidazolidinyl, indolyl, tetrazolyl, isoxazolyl, morpholinyl, oxazolyl, oxadiazolyl, oxazolidinyl, tetrahydrofuran, thiadiazinyl, thiadiazolyl, thiazolyl, triazinyl, triazolyl, benzimidazolyl, 1*H*-indazolyl, benzofuranyl, benzothiofuranyl, 30 benztetrazolyl, benztriazolyl, benzisoxazolyl, benzoxazolyl, oxindolyl, benzoxazolinyl, benzthiazolyl, benzisothiazolyl, isatinoyl, isoquinolinyl, octahydroisoquinolinyl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, isoxazolopyridinyl, quinazolinyl,

quinolinyl, isothiazolopyridinyl, thiazolopyridinyl, oxazolopyridinyl, imidazolopyridinyl, and pyrazolopyridinyl.

Examples of 5- to 6-membered heterocycles include, but are not limited to, pyridinyl, furanyl, thienyl, pyrrolyl, pyrazolyl, pyrazinyl, piperazinyl, piperidinyl, 5 imidazolyl, imidazolidinyl, indolyl, tetrazolyl, isoxazolyl, morpholinyl, oxazolyl, oxadiazolyl, oxazolidinyl, tetrahydrofuranyl, thiadiazinyl, thiadiazolyl, thiazolyl, triazinyl, and triazolyl. Also included are fused ring and spiro compounds containing, for example, the above heterocycles.

As used herein, the term "bicyclic heterocycle" or "bicyclic heterocyclic group" is intended to mean a stable 9- or 10-membered heterocyclic ring system which contains two fused rings and consists of carbon atoms and 1, 2, 3, or 4 heteroatoms independently selected from the group consisting of N, O and S. Of the two fused rings, one ring is a 5- or 6-membered monocyclic aromatic ring comprising a 5-membered heteroaryl ring, a 6-membered heteroaryl ring or a benzo ring, each fused to a second ring. The second ring is a 5- or 6-membered monocyclic ring which is saturated, partially unsaturated, or unsaturated, and comprises a 5-membered heterocycle, a 6-membered heterocycle or a carbocycle (provided the first ring is not benzo when the second ring is a carbocycle).

The bicyclic heterocyclic group may be attached to its pendant group at any heteroatom or carbon atom which results in a stable structure. The bicyclic heterocyclic group described herein may be substituted on carbon or on a nitrogen atom if the resulting compound is stable. It is preferred that when the total number of S and O atoms in the heterocycle exceeds 1, then these heteroatoms are not adjacent to one another. It is preferred that the total number of S and O atoms in the heterocycle is not more than 1.

Examples of a bicyclic heterocyclic group are, but not limited to, quinolinyl, isoquinolinyl, phthalazinyl, quinazolinyl, indolyl, isoindolyl, indolinyl, 1H-indazolyl, benzimidazolyl, 1,2,3,4-tetrahydroquinolinyl, 1,2,3,4-tetrahydroisoquinolinyl, 5,6,7,8-tetrahydro-quinolinyl, 2,3-dihydro-benzofuranyl, chromanyl, 1,2,3,4-tetrahydro-quinoxalinyl, and 1,2,3,4-tetrahydro-quinazolinyl.

As used herein, the term "aromatic heterocyclic group" or "heteroaryl" is intended to mean stable monocyclic and polycyclic aromatic hydrocarbons that include at least one heteroatom ring member such as sulfur, oxygen, or nitrogen. Heteroaryl groups include, without limitation, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, furyl, quinolyl,

isoquinolyl, thienyl, imidazolyl, thiazolyl, indolyl, pyrrolyl, oxazolyl, benzofuryl, benzothienyl, benzthiazolyl, isoxazolyl, pyrazolyl, triazolyl, tetrazolyl, indazolyl, 1,2,4-thiadiazolyl, isothiazolyl, purinyl, carbazolyl, benzimidazolyl, indolinyl, benzodioxolanyl, and benzodioxane. Heteroaryl groups are substituted or unsubstituted.

- 5 The nitrogen atom is substituted or unsubstituted (*i.e.*, N or NR wherein R is H or another substituent, if defined). The nitrogen and sulfur heteroatoms may optionally be oxidized (*i.e.*, N $\rightarrow$ O and S(O)<sub>p</sub>, wherein p is 0, 1 or 2).

Bridged rings are also included in the definition of heterocycle. A bridged ring occurs when one or more atoms (*i.e.*, C, O, N, or S) link two non-adjacent carbon or 10 nitrogen atoms. Examples of bridged rings include, but are not limited to, one carbon atom, two carbon atoms, one nitrogen atom, two nitrogen atoms, and a carbon-nitrogen group. It is noted that a bridge always converts a monocyclic ring into a tricyclic ring. When a ring is bridged, the substituents recited for the ring may also be present on the bridge.

15 The term "counterion" is used to represent a negatively charged species such as chloride, bromide, hydroxide, acetate, and sulfate.

When a dotted ring is used within a ring structure, this indicates that the ring structure may be saturated, partially saturated or unsaturated.

As referred to herein, the term "substituted" means that at least one hydrogen 20 atom is replaced with a non-hydrogen group, provided that normal valencies are maintained and that the substitution results in a stable compound. When a substituent is keto (*i.e.*, =O), then 2 hydrogens on the atom are replaced. Keto substituents are not present on aromatic moieties. When a ring system (*e.g.*, carbocyclic or heterocyclic) is said to be substituted with a carbonyl group or a double bond, it is intended that the 25 carbonyl group or double bond be part (*i.e.*, within) of the ring. Ring double bonds, as used herein, are double bonds that are formed between two adjacent ring atoms (*e.g.*, C=C, C=N, or N=N).

In cases wherein there are nitrogen atoms (*e.g.*, amines) on compounds of the 30 present invention, these may be converted to N-oxides by treatment with an oxidizing agent (*e.g.*, mCPBA and/or hydrogen peroxides) to afford other compounds of this invention. Thus, shown and claimed nitrogen atoms are considered to cover both the shown nitrogen and its N-oxide (N $\rightarrow$ O) derivative.

When any variable occurs more than one time in any constituent or formula for a compound, its definition at each occurrence is independent of its definition at every other occurrence. Thus, for example, if a group is shown to be substituted with 0-3 R groups, then said group may optionally be substituted with up to three R groups, and at each occurrence R is selected independently from the definition of R. Also, combinations of substituents and/or variables are permissible only if such combinations result in stable compounds.

When a bond to a substituent is shown to cross a bond connecting two atoms in a ring, then such substituent may be bonded to any atom on the ring. When a substituent is listed without indicating the atom in which such substituent is bonded to the rest of the compound of a given formula, then such substituent may be bonded via any atom in such substituent. Combinations of substituents and/or variables are permissible only if such combinations result in stable compounds.

The phrase "pharmaceutically acceptable" is employed herein to refer to those compounds, materials, compositions, and/or dosage forms that are, within the scope of sound medical judgment, suitable for use in contact with the tissues of human beings and animals without excessive toxicity, irritation, allergic response, and/or other problem or complication, commensurate with a reasonable benefit/risk ratio.

As used herein, "pharmaceutically acceptable salts" refer to derivatives of the disclosed compounds wherein the parent compound is modified by making acid or base salts thereof. Examples of pharmaceutically acceptable salts include, but are not limited to, mineral or organic acid salts of basic groups such as amines; and alkali or organic salts of acidic groups such as carboxylic acids. The pharmaceutically acceptable salts include the conventional non-toxic salts or the quaternary ammonium salts of the parent compound formed, for example, from non-toxic inorganic or organic acids. For example, such conventional non-toxic salts include those derived from inorganic acids such as hydrochloric, hydrobromic, sulfuric, sulfamic, phosphoric, and nitric; and the salts prepared from organic acids such as acetic, propionic, succinic, glycolic, stearic, lactic, malic, tartaric, citric, ascorbic, pamoic, maleic, hydroxymaleic, phenylacetic, glutamic, benzoic, salicylic, sulfanilic, 2-acetoxybenzoic, fumaric, toluenesulfonic, methanesulfonic, ethane disulfonic, oxalic, and isethionic.

The pharmaceutically acceptable salts of the present invention can be synthesized from the parent compound that contains a basic or acidic moiety by conventional chemical methods. Generally, such salts can be prepared by reacting the free acid or base forms of these compounds with a stoichiometric amount of the appropriate base or acid in water or in an organic solvent, or in a mixture of the two; generally, nonaqueous media like ether, ethyl acetate, ethanol, isopropanol, or acetonitrile are preferred. Lists of suitable salts are found in *Remington's Pharmaceutical Sciences*, 18th Edition, Mack Publishing Company, Easton, PA (1990), the disclosure of which is hereby incorporated by reference.

In addition, compounds of formula I may have prodrug forms. Any compound that will be converted *in vivo* to provide the bioactive agent (*i.e.*, a compound of formula I) is a prodrug within the scope and spirit of the invention. Various forms of prodrugs are well known in the art. For examples of such prodrug derivatives, see:

- a) Bundgaard, H., ed., *Design of Prodrugs*, Elsevier (1985), and Widder, K. et al., eds., *Methods in Enzymology*, 112:309-396, Academic Press (1985);
- b) Bundgaard, H., Chapter 5, "Design and Application of Prodrugs", *A Textbook of Drug Design and Development*, pp. 113-191, Krosgaard-Larsen, P. et al., eds., Harwood Academic Publishers (1991);
- c) Bundgaard, H., *Adv. Drug Deliv. Rev.*, 8:1-38 (1992);
- d) Bundgaard, H. et al., *J. Pharm. Sci.*, 77:285 (1988); and
- e) Kakeya, N. et al., *Chem. Pharm. Bull.*, 32:692 (1984).

Compounds containing a carboxy group can form physiologically hydrolyzable esters that serve as prodrugs by being hydrolyzed in the body to yield formula I compounds *per se*. Such prodrugs are preferably administered orally since hydrolysis in many instances occurs principally under the influence of the digestive enzymes. Parenteral administration may be used where the ester *per se* is active, or in those instances where hydrolysis occurs in the blood. Examples of physiologically hydrolyzable esters of compounds of formula I include C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkylbenzyl, 4-methoxybenzyl, indanyl, phthalyl, methoxymethyl, C<sub>1-6</sub> alkanoyloxy-C<sub>1-6</sub>alkyl (*e.g.*, acetoxyethyl, pivaloyloxymethyl or propionyloxymethyl), C<sub>1-6</sub>alkoxycarbonyloxy-C<sub>1-6</sub>alkyl (*e.g.*, methoxycarbonyl-oxymethyl or ethoxycarbonyloxymethyl,

glycyloxymethyl, phenylglycyloxymethyl, (5-methyl-2-oxo-1,3-dioxolen-4-yl)-methyl), and other well known physiologically hydrolyzable esters used, for example, in the penicillin and cephalosporin arts. Such esters may be prepared by conventional techniques known in the art.

5 Preparation of prodrugs is well known in the art and described in, for example, King, F.D., ed., *Medicinal Chemistry: Principles and Practice*, The Royal Society of Chemistry, Cambridge, UK (1994); Testa, B. et al., *Hydrolysis in Drug and Prodrug Metabolism. Chemistry, Biochemistry and Enzymology*, VCHA and Wiley-VCH, Zurich, Switzerland (2003); Wermuth, C.G., ed., *The Practice of Medicinal Chemistry*, Academic Press, San Diego, CA (1999).

10 The present invention is intended to include all isotopes of atoms occurring in the present compounds. Isotopes include those atoms having the same atomic number but different mass numbers. By way of general example and without limitation, isotopes of hydrogen include deuterium and tritium. Deuterium has one proton and one neutron in its  
15 nucleus and that has twice the mass of ordinary hydrogen. Deuterium can be represented by symbols such as "<sup>2</sup>H" or "D". The term "deuterated" herein, by itself or used to modify a compound or group, refers to replacement of one or more hydrogen atom(s), which is attached to carbon(s), with a deuterium atom. Isotopes of carbon include <sup>13</sup>C and <sup>14</sup>C.

15 Isotopically-labeled compounds of the invention can generally be prepared by conventional techniques known to those skilled in the art or by processes analogous to those described herein, using an appropriate isotopically-labeled reagent in place of the non-labeled reagent otherwise employed. Such compounds have a variety of potential uses, e.g., as standards and reagents in determining the ability of a potential pharmaceutical compound to bind to target proteins or receptors, or for imaging  
20 compounds of this invention bound to biological receptors *in vivo* or *in vitro*.

25 "Stable compound" and "stable structure" are meant to indicate a compound that is sufficiently robust to survive isolation to a useful degree of purity from a reaction mixture, and formulation into an efficacious therapeutic agent. It is preferred that compounds of the present invention do not contain a N-halo, S(O)<sub>2</sub>H, or S(O)H group.

30 The term "solvate" means a physical association of a compound of this invention with one or more solvent molecules, whether organic or inorganic. This physical association includes hydrogen bonding. In certain instances the solvate will be capable of

isolation, for example, when one or more solvent molecules are incorporated in the crystal lattice of the crystalline solid. The solvent molecules in the solvate may be present in a regular arrangement and/or a non-ordered arrangement. The solvate may comprise either a stoichiometric or nonstoichiometric amount of the solvent molecules.

5 "Solvate" encompasses both solution-phase and isolable solvates. Exemplary solvates include, but are not limited to, hydrates, ethanolates, methanolates, and isopropanolates. Methods of solvation are generally known in the art.

Abbreviations as used herein, are defined as follows: "1 x" for once, "2 x" for twice, "3 x" for thrice, " $^{\circ}\text{C}$ " for degrees Celsius, "eq" for equivalent or equivalents, "g" 10 for gram or grams, "mg" for milligram or milligrams, "L" for liter or liters, "mL" for milliliter or milliliters, " $\mu\text{L}$ " for microliter or microliters, "N" for normal, "M" for molar, "mmol" for millimole or millimoles, "min" for minute or minutes, "h" for hour or hours, "rt" for room temperature, "RT" for retention time, "RBF" for round bottom flask, "atm" for atmosphere, "psi" for pounds per square inch, "conc." for concentrate, "RCM" for 15 ring-closing metathesis, "sat" or "sat'd" for saturated, "SFC" for supercritical fluid chromatography, "MW" for molecular weight, "mp" for melting point, "ee" for enantiomeric excess, "MS" or "Mass Spec" for mass spectrometry, "ESI" for electrospray ionization mass spectroscopy, "HR" for high resolution, "HRMS" for high resolution mass spectrometry, "LCMS" for liquid chromatography mass spectrometry, "HPLC" for 20 high pressure liquid chromatography, "RP HPLC" for reverse phase HPLC, "TLC" or "tlc" for thin layer chromatography, "NMR" for nuclear magnetic resonance spectroscopy, "nOe" for nuclear Overhauser effect spectroscopy, " $^1\text{H}$ " for proton, " $\delta$ " for delta, "s" for singlet, "d" for doublet, "t" for triplet, "q" for quartet, "m" for multiplet, "br" for broad, "Hz" for hertz, and " $\alpha$ ", " $\beta$ ", "R", "S", "E", and "Z" are stereochemical 25 designations familiar to one skilled in the art.

Me	methyl
Et	ethyl
Pr	propyl
<i>i</i> -Pr	isopropyl
Bu	butyl
<i>i</i> -Bu	isobutyl

<i>t</i> -Bu	<i>tert</i> -butyl
Ph	phenyl
Bn	benzyl
Boc or BOC	<i>tert</i> -butyloxycarbonyl
Boc <sub>2</sub> O	di- <i>tert</i> -butyl dicarbonate
AcOH or HOAc	acetic acid
AlCl <sub>3</sub>	aluminum chloride
AIBN	Azobisisobutyronitrile
BBr <sub>3</sub>	boron tribromide
BCl <sub>3</sub>	boron trichloride
BEMP	2- <i>tert</i> -butylimino-2-diethylamino-1,3-dimethylperhydro-1,3,2-diazaphosphorine
BOP reagent	benzotriazol-1-yloxytris(dimethylamino)phosphonium hexafluorophosphate
Burgess reagent	1-methoxy-N-triethylammoniosulfonyl-methanimidate
Cbz	carbobenzyloxy
DCM or CH <sub>2</sub> Cl <sub>2</sub>	dichloromethane
CH <sub>3</sub> CN or ACN	acetonitrile
CDCl <sub>3</sub>	deutero-chloroform
CHCl <sub>3</sub>	chloroform
mCPBA or m-CPBA	<i>meta</i> -chloroperbenzoic acid
Cs <sub>2</sub> CO <sub>3</sub>	cesium carbonate
Cu(OAc) <sub>2</sub>	copper (II) acetate
CuI	copper(I) iodide
CuSO <sub>4</sub>	copper(II) sulfate
Cy <sub>2</sub> NMe	N-cyclohexyl-N-methylcyclohexanamine
DBU	1,8-diazabicyclo[5.4.0]undec-7-ene
DCE	1,2 dichloroethane
DEA	diethylamine
Dess-Martin	1,1,1-tris(acetoxy)-1,1-dihydro-1,2-beniziodoxol-3-(1H)-one
DIC or DIPCDI	diisopropylcarbodiimide

DIEA, DIPEA or Hunig's base	diisopropylethylamine
DMAP	4-dimethylaminopyridine
DME	1,2-dimethoxyethane
DMF	dimethyl formamide
DMSO	dimethyl sulfoxide
cDNA	complimentary DNA
Dppp	( <i>R</i> )-(+)1,2-bis(diphenylphosphino)propane
DuPhos	(+)-1,2-bis((2 <i>S</i> ,5 <i>S</i> )-2,5-diethylphospholano)benzene
EDC	<i>N</i> -(3-dimethylaminopropyl)- <i>N'</i> -ethylcarbodiimide
EDCI	<i>N</i> -(3-dimethylaminopropyl)- <i>N'</i> -ethylcarbodiimide hydrochloride
EDTA	ethylenediaminetetraacetic acid
( <i>S,S</i> )-EtDuPhosRh(I)	(+)-1,2-bis((2 <i>S</i> ,5 <i>S</i> )-2,5-diethylphospholano)benzene(1,5-cyclooctadiene)rhodium(I) trifluoromethanesulfonate
Et <sub>3</sub> N or TEA	triethylamine
EtOAc	ethyl acetate
Et <sub>2</sub> O	diethyl ether
EtOH	ethanol
GMF	glass microfiber filter
Grubbs II	(1,3-bis(2,4,6-trimethylphenyl)-2-imidazolidinylidene)dichloro(phenylmethylene)(tricyclohexylphosphine)ruthenium
HCl	hydrochloric acid
HATU	O-(7-azabenzotriazol-1-yl)-N,N,N',N'-tetramethyluronium hexafluorophosphate
HEPES	4-(2-hydroxyethyl)piperazine-1-ethanesulfonic acid
Hex	hexane
HOEt or HOBT	1-hydroxybenzotriazole
H <sub>2</sub> O <sub>2</sub>	hydrogen peroxide
H <sub>2</sub> SO <sub>4</sub>	sulfuric acid
IBX	2-iodoxybenzoic acid
InCl <sub>3</sub>	Indium(III) chloride

Jones reagent	$\text{CrO}_3$ in aqueous $\text{H}_2\text{SO}_4$ , 2 M
$\text{K}_2\text{CO}_3$	potassium carbonate
$\text{K}_2\text{HPO}_4$	potassium phosphate dibasic
$\text{K}_3\text{PO}_4$	potassium phosphate tribasic
$\text{KOAc}$	potassium acetate
$\text{K}_3\text{PO}_4$	potassium phosphate
LAH	lithium aluminum hydride
LG	leaving group
$\text{LiOH}$	lithium hydroxide
$\text{MeOH}$	methanol
$\text{MgSO}_4$	magnesium sulfate
$\text{MsOH}$ or $\text{MSA}$	methylsulfonic acid
$\text{NaCl}$	sodium chloride
$\text{NaH}$	sodium hydride
$\text{NaHCO}_3$	sodium bicarbonate
$\text{Na}_2\text{CO}_3$	sodium carbonate
$\text{NaOH}$	sodium hydroxide
$\text{Na}_2\text{SO}_3$	sodium sulfite
$\text{Na}_2\text{SO}_4$	sodium sulfate
NBS	N-bromosuccinimide
NCS	N-chlorosuccinimide
$\text{NH}_3$	ammonia
$\text{NH}_4\text{Cl}$	ammonium chloride
$\text{NH}_4\text{OH}$	ammonium hydroxide
$\text{NH}_4\text{COOH}$	ammonium formate
NMM	N-methylmorpholine
OTf	triflate or trifluoromethanesulfonate
$\text{Pd}_2(\text{dba})_3$	tris(dibenzylideneacetone)dipalladium(0)
$\text{Pd}(\text{OAc})_2$	palladium(II) acetate
Pd/C	palladium on carbon
$\text{Pd}(\text{dpff})\text{Cl}_2$	[1,1'-bis(diphenylphosphino)-ferrocene]dichloropalladium(II)
$\text{Ph}_3\text{PCl}_2$	triphenylphosphine dichloride

PG	protecting group
POCl <sub>3</sub>	phosphorus oxychloride
i-PrOH or IPA	isopropanol
PS	Polystyrene
rt	room temperature
SEM-Cl	2-(trimethylsilyl)ethoxymethyl chloride
SiO <sub>2</sub>	silica oxide
SnCl <sub>2</sub>	tin(II) chloride
TBAI	tetra- <i>n</i> -butylammonium iodide
TFA	trifluoroacetic acid
THF	tetrahydrofuran
TMSCHN <sub>2</sub>	trimethylsilyldiazomethane
T3P®	propane phosphonic acid anhydride
TRIS	tris (hydroxymethyl) aminomethane
pTsOH	p-toluenesulfonic acid

The compounds of the present invention can be prepared in a number of ways known to one skilled in the art of organic synthesis, which are described in more detail in Section VI.

5

#### IV. BIOLOGY

While blood coagulation is essential to the regulation of an organism's hemostasis, it is also involved in many pathological conditions. In thrombosis, a blood clot, or thrombus, may form and obstruct circulation locally, causing ischemia and organ damage.

10 Alternatively, in a process known as embolism, the clot may dislodge and subsequently become trapped in a distal vessel, where it again causes ischemia and organ damage. Diseases arising from pathological thrombus formation are collectively referred to as thromboembolic disorders and include acute coronary syndrome, unstable angina, myocardial infarction, thrombosis in the cavity of the heart, ischemic stroke, deep vein thrombosis, peripheral occlusive arterial disease, transient ischemic attack, and pulmonary embolism. In addition, thrombosis occurs on artificial surfaces in contact with blood, including catheters, stents, artificial heart valves, and hemodialysis membranes.

Some conditions contribute to the risk of developing thrombosis. For example, alterations of the vessel wall, changes in the flow of blood, and alterations in the composition of the vascular compartment. These risk factors are collectively known as Virchow's triad. (Colman, R.W. et al., eds., *Hemostasis and Thrombosis, Basic Principles and Clinical Practice*, Fifth Edition, p. 853, Lippincott Williams & Wilkins (2006)).

Antithrombotic agents are frequently given to patients at risk of developing thromboembolic disease because of the presence of one or more predisposing risk factors from Virchow's triad to prevent formation of an occlusive thrombus (primary prevention). For example, in an orthopedic surgery setting (e.g., hip and knee replacement), an antithrombotic agent is frequently administered prior to a surgical procedure. The antithrombotic agent counterbalances the prothrombotic stimulus exerted by vascular flow alterations (stasis), potential surgical vessel wall injury, as well as changes in the composition of the blood due to the acute phase response related to surgery. Another example of the use of an antithrombotic agent for primary prevention is dosing with aspirin, a platelet activation inhibitor, in patients at risk for developing thrombotic cardiovascular disease. Well recognized risk factors in this setting include age, male gender, hypertension, diabetes mellitus, lipid alterations, and obesity.

Antithrombotic agents are also indicated for secondary prevention, following an initial thrombotic episode. For example, patients with mutations in factor V (also known as factor V Leiden) and additional risk factors (e.g., pregnancy), are dosed with anticoagulants to prevent the reoccurrence of venous thrombosis. Another example entails secondary prevention of cardiovascular events in patients with a history of acute myocardial infarction or acute coronary syndrome. In a clinical setting, a combination of aspirin and clopidogrel (or other thienopyridines) may be used to prevent a second thrombotic event.

Antithrombotic agents are also given to treat the disease state (*i.e.*, by arresting its development) after it has already started. For example, patients presenting with deep vein thrombosis are treated with anticoagulants (*i.e.*, heparin, warfarin, or LMWH) to prevent further growth of the venous occlusion. Over time, these agents also cause a regression of the disease state because the balance between prothrombotic factors and anticoagulant/profibrinolytic pathways is changed in favor of the latter. Examples on the arterial vascular bed include the treatment of patients with acute myocardial infarction or

acute coronary syndrome with aspirin and clopidogrel to prevent further growth of vascular occlusions and eventually leading to a regression of thrombotic occlusions.

Thus, antithrombotic agents are used widely for primary and secondary prevention (*i.e.*, prophylaxis or risk reduction) of thromboembolic disorders, as well as 5 treatment of an already existing thrombotic process. Drugs that inhibit blood coagulation, or anticoagulants, are "pivotal agents for prevention and treatment of thromboembolic disorders" (Hirsh, J. et al., *Blood*, 105:453-463 (2005)).

An alternative way of initiation of coagulation is operative when blood is exposed to artificial surfaces (*e.g.*, during hemodialysis, "on-pump" cardiovascular surgery, vessel 10 grafts, bacterial sepsis), on cell surfaces, cellular receptors, cell debris, DNA, RNA, and extracellular matrices. This process is also termed contact activation. Surface absorption of factor XII leads to a conformational change in the factor XII molecule, thereby facilitating activation to proteolytic active factor XII molecules (factor XIIa and factor XIIIf). Factor XIIa (or XIIIf) has a number of target proteins, including plasma 15 prekallikrein and factor XI. Active plasma kallikrein further activates factor XII, leading to an amplification of contact activation. Alternatively, the serine protease prolylcarboxylpeptidase can activate plasma kallikrein complexed with high molecular weight kininogen in a multiprotein complex formed on the surface of cells and matrices (Shariat-Madar et al., *Blood*, 108:192-199 (2006)). Contact activation is a surface 20 mediated process responsible in part for the regulation of thrombosis and inflammation, and is mediated, at least in part, by fibrinolytic-, complement-, kininogen/kinin-, and other humoral and cellular pathways (for review, Coleman, R., "Contact Activation Pathway", *Hemostasis and Thrombosis*, pp. 103-122, Lippincott Williams & Wilkins (2001); Schmaier, A.H., "Contact Activation", *Thrombosis and Hemorrhage*, pp. 105-128 25 (1998)). The biological relevance of the contact activation system for thromboembolic diseases is supported by the phenotype of factor XII deficient mice. More specifically, factor XII deficient mice were protected from thrombotic vascular occlusion in several thrombosis models as well as stroke models and the phenotype of the XII deficient mice was identical to XI deficient mice (Renne et al., *J. Exp. Med.*, 202:271-281 (2005); 30 Kleinschmitz et al., *J. Exp. Med.*, 203:513-518 (2006)). The fact that factor XI is downstream from factor XIIa, combined with the identical phenotype of the XII and XI

deficient mice suggest that the contact activation system could play a major role in factor XI activation *in vivo*.

Factor XI is a zymogen of a trypsin-like serine protease and is present in plasma at a relatively low concentration. Proteolytic activation at an internal R369-I370 bond 5 yields a heavy chain (369 amino acids) and a light chain (238 amino acids). The latter contains a typical trypsin-like catalytic triad (H413, D464, and S557). Activation of factor XI by thrombin is believed to occur on negatively charged surfaces, most likely on the surface of activated platelets. Platelets contain high affinity (0.8 nM) specific sites 10 (130-500/platelet) for activated factor XI. After activation, factor XIa remains surface bound and recognizes factor IX as its normal macromolecular substrate. (Galiani, D., *Trends Cardiovasc. Med.*, 10:198-204 (2000)).

In addition to the feedback activation mechanisms described above, thrombin activates thrombin activated fibrinolysis inhibitor (TAFI), a plasma carboxypeptidase that cleaves C-terminal lysine and arginine residues on fibrin, reducing the ability of fibrin to 15 enhance tissue-type plasminogen activator (tPA) dependent plasminogen activation. In the presence of antibodies to FXIa, clot lysis can occur more rapidly independent of plasma TAFI concentration. (Bouma, B.N. et al., *Thromb. Res.*, 101:329-354 (2001).) Thus, inhibitors of factor XIa are expected to be anticoagulant and profibrinolytic.

Further evidence for the anti-thromboembolic effects of targeting factor XI is 20 derived from mice deficient in factor XI. It has been demonstrated that complete fXI deficiency protected mice from ferric chloride ( $\text{FeCl}_3$ )-induced carotid artery thrombosis (Rosen et al., *Thromb. Haemost.*, 87:774-777 (2002); Wang et al., *J. Thromb. Haemost.*, 3:695-702 (2005)). Also, factor XI deficiency rescues the perinatal lethal phenotype of 25 complete protein C deficiency (Chan et al., *Amer. J. Pathology*, 158:469-479 (2001)). Furthermore, baboon cross-reactive, function blocking antibodies to human factor XI protect against baboon arterial-venous shunt thrombosis (Gruber et al., *Blood*, 102:953- 30 955 (2003)). Evidence for an antithrombotic effect of small molecule inhibitors of factor XIa is also disclosed in published U.S. Patent Publication No. 2004/0180855 A1. Taken together, these studies suggest that targeting factor XI will reduce the propensity for thrombotic and thromboembolic diseases.

Genetic evidence indicates that factor XI is not required for normal homeostasis, implying a superior safety profile of the factor XI mechanism compared to competing

antithrombotic mechanisms. In contrast to hemophilia A (factor VIII deficiency) or hemophilia B (factor IX deficiency), mutations of the factor XI gene causing factor XI deficiency (hemophilia C) result in only a mild to moderate bleeding diathesis characterized primarily by postoperative or posttraumatic, but rarely spontaneous  
5 hemorrhage. Postoperative bleeding occurs mostly in tissue with high concentrations of endogenous fibrinolytic activity (e.g., oral cavity, and urogenital system). The majority of the cases are fortuitously identified by preoperative prolongation of aPTT (intrinsic system) without any prior bleeding history.

The increased safety of inhibition of XIa as an anticoagulation therapy is further  
10 supported by the fact that Factor XI knock-out mice, which have no detectable factor XI protein, undergo normal development, and have a normal life span. No evidence for spontaneous bleeding has been noted. The aPTT (intrinsic system) is prolonged in a gene dose-dependent fashion. Interestingly, even after severe stimulation of the coagulation system (tail transection), the bleeding time is not significantly prolonged compared to  
15 wild-type and heterozygous litter mates. (Gailani, D., *Frontiers in Bioscience*, 6:201-207 (2001); Gailani, D. et al., *Blood Coagulation and Fibrinolysis*, 8:134-144 (1997).) Taken together, these observations suggest that high levels of inhibition of factor XIa should be well tolerated. This is in contrast to gene targeting experiments with other coagulation factors, excluding factor XII.

20        *In vivo* activation of factor XI can be determined by complex formation with either C1 inhibitor or alpha 1 antitrypsin. In a study of 50 patients with acute myocardial infarction (AMI), approximately 25% of the patients had values above the upper normal range of the complex ELISA. This study can be viewed as evidence that at least in a subpopulation of patients with AMI, factor XI activation contributes to thrombin  
25 formation (Minnema, M.C. et al., *Arterioscler. Thromb. Vasc. Biol.*, 20:2489-2493 (2000)). A second study establishes a positive correlation between the extent of coronary arteriosclerosis and factor XIa in complex with alpha 1 antitrypsin (Murakami, T. et al., *Arterioscler. Thromb. Vasc. Biol.*, 15:1107-1113 (1995)). In another study, Factor XI levels above the 90th percentile in patients were associated with a 2.2-fold increased risk  
30 for venous thrombosis (Meijers, J.C.M. et al., *N. Engl. J. Med.*, 342:696-701 (2000)).

Also, it is preferred to find new compounds with improved activity in *in vitro* clotting assays, compared with known serine protease inhibitors, such as the activated

partial thromboplastin time (aPTT) or prothrombin time (PT) assay. (for a description of the aPTT and PT assays see, Goodnight, S.H. et al., "Screening Tests of Hemostasis", *Disorders of Thrombosis and Hemostasis: A Clinical Guide*, Second Edition, pp. 41-51, McGraw-Hill, New York (2001)).

5 It is also desirable and preferable to find compounds with advantageous and improved characteristics compared with known serine protease inhibitors, in one or more of the following categories that are given as examples, and are not intended to be limiting: (a) pharmacokinetic properties, including oral bioavailability, half life, and clearance; (b) pharmaceutical properties; (c) dosage requirements; (d) factors that 10 decrease blood concentration peak-to-trough characteristics; (e) factors that increase the concentration of active drug at the receptor; (f) factors that decrease the liability for clinical drug-drug interactions; (g) factors that decrease the potential for adverse side-effects, including selectivity versus other biological targets; and (h) factors that improve manufacturing costs or feasibility.

15 Pre-clinical studies demonstrated significant antithrombotic effects of small molecule factor XIa inhibitors in rabbit and rat model of arterial thrombosis, at doses that preserved hemostasis. (Wong P.C. et al., *American Heart Association Scientific Sessions*, Abstract No. 6118, November 12-15, 2006; Schumacher, W. et al., *J. Thromb. Haemost.*, 3(Suppl. 1):P1228 (2005); Schumacher, W.A. et al., *Eur. J. Pharmacol.*, 167-174 (2007)).

20 Furthermore, it was observed that *in vitro* prolongation of the aPTT by specific XIa inhibitors is a good predictor of efficacy in our thrombosis models. Thus, the *in vitro* aPTT test can be used as a surrogate for efficacy *in vivo*.

As used herein, the term "patient" encompasses all mammalian species.

25 As used herein, "treating" or "treatment" cover the treatment of a disease-state in a mammal, particularly in a human, and include: (a) inhibiting the disease-state, *i.e.*, arresting its development; and/or (b) relieving the disease-state, *i.e.*, causing regression of the disease state.

30 As used herein, "prophylaxis" is the protective treatment of a disease state to reduce and/or minimize the risk and/or reduction in the risk of recurrence of a disease state by administering to a patient a therapeutically effective amount of at least one of the compounds of the present invention or a stereoisomer, a tautomer, a pharmaceutically acceptable salt, or a solvate thereof. Patients may be selected for

prophylaxis therapy based on factors that are known to increase risk of suffering a clinical disease state compared to the general population. For prophylaxis treatment, conditions of the clinical disease state may or may not be presented yet. "Prophylaxis" treatment can be divided into (a) primary prophylaxis and (b) secondary prophylaxis. Primary 5 prophylaxis is defined as treatment to reduce or minimize the risk of a disease state in a patient that has not yet presented with a clinical disease state, whereas secondary prophylaxis is defined as minimizing or reducing the risk of a recurrence or second occurrence of the same or similar clinical disease state.

As used herein, "risk reduction" covers therapies that lower the incidence of 10 development of a clinical disease state. As such, primary and secondary prevention therapies are examples of risk reduction.

"Therapeutically effective amount" is intended to include an amount of a compound of the present invention that is effective when administered alone or in combination to inhibit factor XIa and/or plasma kallikrein and/or to prevent or treat the 15 disorders listed herein. When applied to a combination, the term refers to combined amounts of the active ingredients that result in the preventive or therapeutic effect, whether administered in combination, serially, or simultaneously.

The term "thrombosis", as used herein, refers to formation or presence of a thrombus (pl. thrombi); clotting within a blood vessel that may cause ischemia or 20 infarction of tissues supplied by the vessel. The term "embolism", as used herein, refers to sudden blocking of an artery by a clot or foreign material that has been brought to its site of lodgment by the blood current. The term "thromboembolism", as used herein, refers to obstruction of a blood vessel with thrombotic material carried by the blood stream from the site of origin to plug another vessel. The term "thromboembolic 25 disorders" entails both "thrombotic" and "embolic" disorders (defined above).

The term "thromboembolic disorders" as used herein includes arterial cardiovascular thromboembolic disorders, venous cardiovascular or cerebrovascular thromboembolic disorders, and thromboembolic disorders in the chambers of the heart or in the peripheral circulation. The term "thromboembolic disorders" as used herein also 30 includes specific disorders selected from, but not limited to, unstable angina or other acute coronary syndromes, atrial fibrillation, first or recurrent myocardial infarction, ischemic sudden death, transient ischemic attack, stroke, atherosclerosis, peripheral

occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface  
5 that promotes thrombosis. The medical implants or devices include, but are not limited to: prosthetic valves, artificial valves, indwelling catheters, stents, blood oxygenators, shunts, vascular access ports, ventricular assist devices and artificial hearts or heart chambers, and vessel grafts. The procedures include, but are not limited to: cardiopulmonary bypass, percutaneous coronary intervention, and hemodialysis. In  
10 another embodiment, the term "thromboembolic disorders" includes acute coronary syndrome, stroke, deep vein thrombosis, and pulmonary embolism.

In another embodiment, the present invention provides a method for the treatment of a thromboembolic disorder, wherein the thromboembolic disorder is selected from unstable angina, an acute coronary syndrome, atrial fibrillation, myocardial infarction,  
15 transient ischemic attack, stroke, atherosclerosis, peripheral occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface that promotes thrombosis.  
20 In another embodiment, the present invention provides a method for the treatment of a thromboembolic disorder, wherein the thromboembolic disorder is selected from acute coronary syndrome, stroke, venous thrombosis, atrial fibrillation, and thrombosis resulting from medical implants and devices.

In another embodiment, the present invention provides a method for the primary prophylaxis of a thromboembolic disorder, wherein the thromboembolic disorder is selected from unstable angina, an acute coronary syndrome, atrial fibrillation, myocardial infarction, ischemic sudden death, transient ischemic attack, stroke, atherosclerosis, peripheral occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface that promotes thrombosis. In another embodiment, the present invention  
30

provides a method for the primary prophylaxis of a thromboembolic disorder, wherein the thromboembolic disorder is selected from acute coronary syndrome, stroke, venous thrombosis, and thrombosis resulting from medical implants and devices.

In another embodiment, the present invention provides a method for the secondary prophylaxis of a thromboembolic disorder, wherein the thromboembolic disorder is selected from unstable angina, an acute coronary syndrome, atrial fibrillation, recurrent myocardial infarction, transient ischemic attack, stroke, atherosclerosis, peripheral occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface that promotes thrombosis. In another embodiment, the present invention provides a method for the secondary prophylaxis of a thromboembolic disorder, wherein the thromboembolic disorder is selected from acute coronary syndrome, stroke, atrial fibrillation and venous thrombosis.

The term "stroke", as used herein, refers to embolic stroke or atherothrombotic stroke arising from occlusive thrombosis in the carotid communis, carotid interna, or intracerebral arteries.

It is noted that thrombosis includes vessel occlusion (*e.g.*, after a bypass) and reocclusion (*e.g.*, during or after percutaneous transluminal coronary angioplasty). The thromboembolic disorders may result from conditions including but not limited to atherosclerosis, surgery or surgical complications, prolonged immobilization, arterial fibrillation, congenital thrombophilia, cancer, diabetes, effects of medications or hormones, and complications of pregnancy.

Thromboembolic disorders are frequently associated with patients with atherosclerosis. Risk factors for atherosclerosis include but are not limited to male gender, age, hypertension, lipid disorders, and diabetes mellitus. Risk factors for atherosclerosis are at the same time risk factors for complications of atherosclerosis, *i.e.*, thromboembolic disorders.

Similarly, arterial fibrillation is frequently associated with thromboembolic disorders. Risk factors for arterial fibrillation and subsequent thromboembolic disorders include cardiovascular disease, rheumatic heart disease, nonrheumatic mitral valve

disease, hypertensive cardiovascular disease, chronic lung disease, and a variety of miscellaneous cardiac abnormalities as well as thyrotoxicosis.

5 Diabetes mellitus is frequently associated with atherosclerosis and thromboembolic disorders. Risk factors for the more common type 2 include but are not limited to are family history, obesity, physical inactivity, race/ethnicity, previously impaired fasting glucose or glucose tolerance test, history of gestational diabetes mellitus or delivery of a "big baby", hypertension, low HDL cholesterol, and polycystic ovary syndrome.

10 Risk factors for congenital thrombophilia include gain of function mutations in coagulation factors or loss of function mutations in the anticoagulant- or fibrinolytic pathways.

15 Thrombosis has been associated with a variety of tumor types, *e.g.*, pancreatic cancer, breast cancer, brain tumors, lung cancer, ovarian cancer, prostate cancer, gastrointestinal malignancies, and Hodgkins or non-Hodgkins lymphoma. Recent studies suggest that the frequency of cancer in patients with thrombosis reflects the frequency of a particular cancer type in the general population (Levitian, N. et al., *Medicine* (Baltimore), 78(5):285-291 (1999); Levine M. et al., *N. Engl. J. Med.*, 334(11):677-681 (1996); Blom, J.W. et al., *JAMA*, 293(6):715-722 (2005)). Hence, the most common cancers associated with thrombosis in men are prostate, colorectal, brain, and lung cancer, 20 and in women are breast, ovary, and lung cancer. The observed rate of venous thromboembolism (VTE) in cancer patients is significant. The varying rates of VTE between different tumor types are most likely related to the selection of the patient population. Cancer patients at risk for thrombosis may possess any or all of the following risk factors: (i) the stage of the cancer (*i.e.*, presence of metastases), (ii) the presence of 25 central vein catheters, (iii) surgery and anticancer therapies including chemotherapy, and (iv) hormones and antiangiogenic drugs. Thus, it is common clinical practice to dose patients having advanced tumors with heparin or low molecular heparin to prevent thromboembolic disorders. A number of low molecular heparin preparations have been approved by the FDA for these indications.

30 There are three main clinical situations when considering the prevention of VTE in a medical cancer patient: (i) the patient is bedridden for prolonged periods of time; (ii) the ambulatory patient is receiving chemotherapy or radiation; and (iii) the patient is with

indwelling central vein catheters. Unfractionated heparin (UFH) and low molecular weight heparin (LMWH) are effective antithrombotic agents in cancer patients undergoing surgery. (Mismetti, P. et al., *Br. J. Surg.*, 88:913-930 (2001).)

5      A.     *In Vitro Assays*

The effectiveness of compounds of the present invention as inhibitors of the coagulation Factors XIa, VIIa, IXa, Xa, XIIa, plasma kallikrein or thrombin, can be determined using a relevant purified serine protease, respectively, and an appropriate synthetic substrate. The rate of hydrolysis of the chromogenic or fluorogenic substrate by the relevant serine protease was measured both in the absence and presence of compounds of the present invention. Hydrolysis of the substrate resulted in the release of pNA (para nitroaniline), which was monitored spectrophotometrically by measuring the increase in absorbance at 405 nm, or the release of AMC (amino methylcoumarin), which was monitored spectrofluorometrically by measuring the increase in emission at 460 nm with excitation at 380 nm. A decrease in the rate of absorbance or fluorescence change in the presence of inhibitor is indicative of enzyme inhibition. Such methods are known to one skilled in the art. The results of this assay are expressed as the inhibitory constant, K<sub>i</sub>.

Factor XIa determinations were made in 50 mM HEPES buffer at pH 7.4 containing 145 mM NaCl, 5 mM KCl, and 0.1% PEG 8000 (polyethylene glycol; JT Baker or Fisher Scientific). Determinations were made using purified human Factor XIa at a final concentration of 25-200 pM (Haematologic Technologies) and the synthetic substrate S-2366 (pyroGlu-Pro-Arg-pNA; CHROMOGENIX® or AnaSpec) at a concentration of 0.0002-0.001 M.

Factor VIIa determinations were made in 0.005 M calcium chloride, 0.15 M sodium chloride, 0.05 M HEPES buffer containing 0.1% PEG 8000 at a pH of 7.5. Determinations were made using purified human Factor VIIa (Haematologic Technologies) or recombinant human Factor VIIa (Novo Nordisk) at a final assay concentration of 0.5-10 nM, recombinant soluble tissue factor at a concentration of 10-40 nM and the synthetic substrate H-D-Ile-Pro-Arg-pNA (S-2288; CHROMOGENIX® or BMPM-2; AnaSpec) at a concentration of 0.001-0.0075 M.

Factor IXa determinations were made in 0.005 M calcium chloride, 0.1 M sodium chloride, 0.0000001 M Refludan (Berlex), 0.05 M TRIS base and 0.5% PEG 8000 at a pH

of 7.4. Refludan was added to inhibit small amounts of thrombin in the commercial preparations of human Factor IXa. Determinations were made using purified human Factor IXa (Haematologic Technologies) at a final assay concentration of 20-100 nM and the synthetic substrate PCIXA2100-B (CenterChem) or Pefluor IXa 3688 (H-D-Leu-  
5 Ph'Gly-Arg-AMC; CenterChem) at a concentration of 0.0004-0.0005 M.

Factor Xa determinations were made in 0.1 M sodium phosphate buffer at a pH of 7.5 containing 0.2 M sodium chloride and 0.5% PEG 8000. Determinations were made using purified human Factor Xa (Haematologic Technologies) at a final assay concentration of 150-1000 pM and the synthetic substrate S-2222 (Bz-Ile-Glu (gamma-  
10 OMe, 50%)-Gly-Arg-pNA; CHROMOGENIX®) at a concentration of 0.0002-0.00035 M.

Factor XIIa determinations were made in 0.05 M HEPES buffer at pH 7.4 containing 0.145 M NaCl, 0.05 M KCl, and 0.1% PEG 8000. Determinations were made using purified human Factor XIIa at a final concentration of 4 nM (American  
15 Diagnostica) and the synthetic substrate SPECTROZYME® #312 (H-D-CHT-Gly-L-Arg-pNA.2AcOH; American Diagnostica) at a concentration of 0.00015 M.

Plasma kallikrein determinations were made in 0.1 M sodium phosphate buffer at a pH of 7.5 containing 0.1-0.2 M sodium chloride and 0.5% PEG 8000. Determinations were made using purified human plasma kallikrein (Enzyme Research Laboratories) at a final assay concentration of 200 pM and the synthetic substrate S-2302 (H-(D)-Pro-Phe-  
20 Arg-pNA; CHROMOGENIX®) at a concentration of 0.00008-0.0004 M.

Thrombin determinations were made in 0.1 M sodium phosphate buffer at a pH of 7.5 containing 0.2 M sodium chloride and 0.5% PEG 8000. Determinations were made using purified human alpha thrombin (Haematologic Technologies or Enzyme Research  
25 Laboratories) at a final assay concentration of 200-250 pM and the synthetic substrate S-2366 (pyroGlu-Pro-Arg-pNA; CHROMOGENIX® or AnaSpec) at a concentration of 0.0002-0.0004 M.

The Michaelis constant,  $K_m$ , for substrate hydrolysis by each protease, was determined at 25 °C or 37 °C in the absence of inhibitor. Values of  $K_i$  were determined  
30 by allowing the protease to react with the substrate in the presence of the inhibitor. Reactions were allowed to go for periods of 20-180 minutes (depending on the protease)

and the velocities (rate of absorbance or fluorescence change versus time) were measured. The following relationships were used to calculate  $K_i$  values:

$$(V_{max} * S) / (K_m + S)$$

$(v_o - v_s) / v_s = I / (K_i(1 + S/K_m))$  for a competitive inhibitor with one binding site; or

5  $v_s / v_o = A + (B-A) / (1 + (I/IC_{50})^n)$ ; and

$$K_i = IC_{50} / (1 + S/K_m)$$
 for a competitive inhibitor

where:

$v_o$  is the velocity of the control in the absence of inhibitor;

$v_s$  is the velocity in the presence of inhibitor;

10  $V_{max}$  is the maximum reaction velocity;

$I$  is the concentration of inhibitor;

$A$  is the minimum activity remaining (usually locked at zero);

$B$  is the maximum activity remaining (usually locked at 1.0);

15  $n$  is the Hill coefficient, a measure of the number and cooperativity of potential inhibitor binding sites;

$IC_{50}$  is the concentration of inhibitor that produces 50% inhibition under the assay conditions;

$K_i$  is the dissociation constant of the enzyme: inhibitor complex;

$S$  is the concentration of substrate; and

20  $K_m$  is the Michaelis constant for the substrate.

The selectivity of a compound may be evaluated by taking the ratio of the  $K_i$  value for a given protease with the  $K_i$  value for the protease of interest (*i.e.*, selectivity for FXIa versus protease P =  $K_i$  for protease P /  $K_i$  for FXIa). Compounds with selectivity ratios >20 are considered selective.

25 The effectiveness of compounds of the present invention as inhibitors of coagulation can be determined using a standard or modified clotting assay. An increase in the plasma clotting time in the presence of inhibitor is indicative of anticoagulation. Relative clotting time is the clotting time in the presence of an inhibitor divided by the clotting time in the absence of an inhibitor. The results of this assay may be expressed as IC1.5x or IC2x, the inhibitor concentration required to increase the clotting time by 50 or 100 percent, respectively. The IC1.5x or IC2x is found by linear interpolation from

relative clotting time versus inhibitor concentration plots using inhibitor concentration that spans the IC1.5x or IC2x.

Clotting times are determined using citrated normal human plasma as well as plasma obtained from a number of laboratory animal species (e.g., rat, or rabbit). A 5 compound is diluted into plasma beginning with a 10 mM DMSO stock solution. The final concentration of DMSO is less than 2%. Plasma clotting assays are performed in an automated coagulation analyzer (SYSMEX®, Dade-Behring, Illinois). Similarly, clotting times can be determined from laboratory animal species or humans dosed with compounds of the invention.

10 Activated Partial Thromboplastin Time (aPTT) is determined using ACTIN® FSL (Dade-Behring, Illinois) following the directions in the package insert. Plasma (0.05 mL) is warmed to 37 °C for 1 minute. ACTIN® FSL (0.05 mL) is added to the plasma and incubated for an additional 2 to 5 minutes. Calcium chloride (25 mM, 0.05 mL) is added to the reaction to initiate coagulation. The clotting time is the time in seconds from the 15 moment calcium chloride is added until a clot is detected.

Prothrombin Time (PT) is determined using thromboplastin (Thromboplastin C Plus or INNOVIN®, Dade-Behring, Illinois) following the directions in the package insert. Plasma (0.05 mL) is warmed to 37 °C for 1 minute. Thromboplastin (0.1 mL) is added to the plasma to initiate coagulation. The clotting time is the time in seconds from the 20 moment thromboplastin is added until a clot is detected.

Equilibrium solubilities were determined in various aqueous solvents buffered to a specific pH. Approximately 1 mg of compound was used for equilibration in 100 to 300 µL of solvent. Samples were stirred at 300 RPM at room temperature (20 ± 2 °C) for 24 hours. If solubilization of the entire solid was observed, additional compound was added 25 to keep the solid in excess for the duration of the study. After 24 hours, microscopy was used to determine if there was a change in morphology to the excess solid. The supernatants were then filtered through a 0.22 µm PVDF filter plate and diluted with acetonitrile for HPLC analysis. Calibration samples were also provided for HPLC analysis.

30 The extent to which compounds of the present invention bind to human serum proteins can be determined using dialysis methods and analytical techniques well known in the art and described in, for example, Plise, E.G. et al., "Semi-automated protein

binding methodology using equilibrium dialysis and a novel mixed-matrix cassette approach", *J. Pharm. Sci.*, 99(12):5070-5078 (2010); Waters, N.J. et al., "Validation of a rapid equilibrium dialysis approach for the measurement of plasma protein binding", *J. Pharm. Sci.*, 97(10):4586-4595 (2008); Van Liempd, S. et al., "Development and 5 Validation of a Higher-Throughput Equilibrium Dialysis Assay for Plasma Protein Binding", *J. Lab. Autom.*, 16:56-67 (2011); Di, L. et al., "Impact of Recovery on Fraction Unbound Using Equilibrium Dialysis", *J. Pharm. Sci.*, 101(3):1327-1335 (2011).

Compounds of the present invention were assayed in triplicate by combining with 10 human serum to achieve a final concentration of 10 µM. Dialysis was performed for 5 hours at 37 °C, in a 10% CO<sub>2</sub> atmosphere against 0.133 M sodium phosphate buffer 15 adjusted to pH 7.4 using the two-chamber Rapid Equilibrium Dialysis Assay Plates from Thermo Fisher (Waltham, Massachusetts). Assay samples from buffer and serum chambers were collected at time zero ( $T_{0[\text{Serum}]}$  and  $T_{0[\text{Buffer}]}$ ) and at 5 hours post-incubation ( $T_{5\text{h}[\text{Serum}]}$  and  $T_{5\text{h}[\text{Buffer}]}$ ). Prior to analysis, dialyzed serum samples were 20 diluted with 0.133 M sodium phosphate buffer adjusted to pH 7.4 and dialyzed buffer samples were diluted with human serum to result in the same final serum concentration in each sample. Subsequently, these samples were extracted by protein precipitation in acetonitrile containing two analytical internal standards (200 nM alprenolol and 600 nM tolbutamide). Precipitated proteins and supernatants were separated by centrifugation at 25 4000×g for 10 minutes. Sample supernatants were analyzed by LC-MS/MS and the peak area ratios of compound to the internal standard were determined for initial time zero samples ( $T_{0[\text{Serum}]}$  and  $T_{0[\text{Buffer}]}$ ) and for post-equilibrium samples ( $T_{5\text{h}[\text{Serum}]}$  and  $T_{5\text{h}[\text{Buffer}]}$ ). The percent free (free fraction), percent bound, and percent recovery results were calculated as follows:

$$25 \quad \text{Percent free} = 100 \times (T_{5\text{h}[\text{Buffer}]} / T_{5\text{h}[\text{Serum}]})$$

$$\text{Percent bound} = 100 - \text{percent free}$$

$$\text{Percent recovery} = 100 \times ((T_{5\text{h}[\text{Buffer}]} + T_{5\text{h}[\text{Serum}]}) / T_{0[\text{Serum}]})$$

Matrix interference was assessed by measuring the LC-MS/MS area ratio of 30 analyte/internal standard for assay matrix blank (50:50 serum:buffer). The analytical conditions were deemed acceptable for assessment of percent free when the area ratio of

analyte/internal standard for assay matrix blank (50:50 serum:buffer) was less than 20% of the area ratio for the T5h[Buffer] sample.

The exemplified Examples disclosed below were tested in the Factor XIa assay  
5 described above and found having Factor XIa inhibitory activity. A range of Factor XIa inhibitory activity (Ki values) of  $\leq 10 \mu\text{M}$  (10000 nM) was observed. Table 1 below lists Factor XIa Ki values measured at 37 °C for the following Examples.

Table 1

Example No.	Factor XIa Ki (nM)
1	0.1
2	0.6
10	0.2
11	0.2

The effectiveness of the compounds of the present invention as antithrombotic agents is also assessed in other assays such as aPTT, solubility, and human protein binding affinity described above. Compared to the phenyl P2' macrocycles disclosed in WO 2013/022814 and WO 2014/022766, the pyrazolyl P2' macrocycles of the present application exhibited surprising pharmacological activities. As shown in Table 3, the compounds of the present invention possess superior anticoagulant activity, solubility and bioavailability compared to the reference compounds.

10

Table 3

Example No.	aPTT <sub>1.5x</sub> (μM)	Solubility at pH = 6.5 μg/mL	Human protein binding Free fraction
Example 1 from WO 2014/022766	1.50	<0.001 (cryst.)	0.7%
Example 100 from WO 2013/022814	1.33	0.005 (amphor.)	5%

20	0.22	>3,000 (amphor.)	25%
21	0.24	>3,400 (amphor.)	11%

B. *In Vivo Assays*

The effectiveness of compounds of the present invention as antithrombotic agents can be determined using relevant *in vivo* thrombosis models, including *In Vivo*

5 Electrically-induced Carotid Artery Thrombosis Models and *In Vivo* Rabbit Arterio-venous Shunt Thrombosis Models.

a. *In Vivo* Electrically-induced Carotid Artery Thrombosis (ECAT) Model

The rabbit ECAT model, described by Wong et al. (*J. Pharmacol. Exp. Ther.*, 10 295:212-218 (2000)), can be used in this study. Male New Zealand White rabbits are anesthetized with ketamine (50 mg/kg + 50 mg/kg/h IM) and xylazine (10 mg/kg + 10 mg/kg/h IM). These anesthetics are supplemented as needed. An electromagnetic flow probe is placed on a segment of an isolated carotid artery to monitor blood flow. Test agents or vehicle will be given (i.v., i.p., s.c., or orally) prior to or after the initiation of 15 thrombosis. Drug treatment prior to initiation of thrombosis is used to model the ability of test agents to prevent and reduce the risk of thrombus formation, whereas dosing after initiation is used to model the ability to treat existing thrombotic disease. Thrombus formation is induced by electrical stimulation of the carotid artery for 3 min at 4 mA using an external stainless-steel bipolar electrode. Carotid blood flow is measured 20 continuously over a 90-min period to monitor thrombus-induced occlusion. Total carotid blood flow over 90 min is calculated by the trapezoidal rule. Average carotid flow over 90 min is then determined by converting total carotid blood flow over 90 min to percent

of total control carotid blood flow, which would result if control blood flow had been maintained continuously for 90 min. The ED<sub>50</sub> (dose that increased average carotid blood flow over 90 min to 50% of the control) of compounds are estimated by a nonlinear least square regression program using the Hill sigmoid E<sub>max</sub> equation (DeltaGraph; SPSS Inc., Chicago, IL).

5 b. *In vivo* Rabbit Arterio-venous (AV) Shunt Thrombosis Model

The rabbit AV shunt model, described by Wong et al. (Wong, P.C. et al., *J. Pharmacol. Exp. Ther.* 292:351-357 (2000)), can be used in this study. Male New Zealand White rabbits are anesthetized with ketamine (50 mg/kg + 50 mg/kg/h IM) and xylazine (10 mg/kg + 10 mg/kg/h IM). These anesthetics are supplemented as needed. The femoral artery, jugular vein and femoral vein are isolated and catheterized. A saline-filled AV shunt device is connected between the femoral arterial and the femoral venous cannulae. The AV shunt device consists of an outer piece of tygon tubing (length = 8 cm; internal diameter = 7.9 mm) and an inner piece of tubing (length = 2.5 cm; internal diameter = 4.8 mm). The AV shunt also contains an 8-cm-long 2-0 silk thread (Ethicon, Somerville, NJ). Blood flows from the femoral artery via the AV-shunt into the femoral vein. The exposure of flowing blood to a silk thread induces the formation of a significant thrombus. Forty minutes later, the shunt is disconnected and the silk thread covered with thrombus is weighed. Test agents or vehicle will be given (i.v., i.p., s.c., or orally) prior to the opening of the AV shunt. The percentage inhibition of thrombus formation is determined for each treatment group. The ID<sub>50</sub> values (dose that produces 50% inhibition of thrombus formation) are estimated by a nonlinear least square regression program using the Hill sigmoid E<sub>max</sub> equation (DeltaGraph; SPSS Inc., Chicago, IL).

10 The anti-inflammatory effect of these compounds can be demonstrated in an Evans Blue dye extravasation assay using C1-esterase inhibitor deficient mice. In this model, mice are dosed with a compound of the present invention, Evans Blue dye is injected via the tail vein, and extravasation of the blue dye is determined by spectrophotometric means from tissue extracts.

15 The ability of the compounds of the current invention to reduce or prevent the systemic inflammatory response syndrome, for example, as observed during on-pump

cardiovascular procedures, can be tested in *in vitro* perfusion systems, or by on-pump surgical procedures in larger mammals, including dogs and baboons. Read-outs to assess the benefit of the compounds of the present invention include for example, reduced platelet loss, reduced platelet / white blood cell complexes, reduced neutrophil elastase 5 levels in plasma, reduced activation of complement factors, and reduced activation and/or consumption of contact activation proteins (plasma kallikrein, factor XII, factor XI, high molecular weight kininogen, C1-esterase inhibitors).

The compounds of the present invention may also be useful as inhibitors of additional serine proteases, notably human thrombin, human plasma kallikrein and human 10 human plasmin. Because of their inhibitory action, these compounds are indicated for use in the prevention or treatment of physiological reactions, including blood coagulation, fibrinolysis, blood pressure regulation and inflammation, and wound healing catalyzed by the aforesaid class of enzymes. Specifically, the compounds have utility as drugs for the treatment of diseases arising from elevated thrombin activity of the aforementioned serine 15 proteases, such as myocardial infarction, and as reagents used as anticoagulants in the processing of blood to plasma for diagnostic and other commercial purposes.

## V. PHARMACEUTICAL COMPOSITIONS, FORMULATIONS AND COMBINATIONS

20 The compounds of this invention can be administered in such oral dosage forms as tablets, capsules (each of which includes sustained release or timed release formulations), pills, powders, granules, elixirs, tinctures, suspensions, syrups, and emulsions. They may also be administered in intravenous (bolus or infusion), intraperitoneal, subcutaneous, or intramuscular form, all using dosage forms well known 25 to those of ordinary skill in the pharmaceutical arts. They can be administered alone, but generally will be administered with a pharmaceutical carrier selected on the basis of the chosen route of administration and standard pharmaceutical practice.

The term "pharmaceutical composition" means a composition comprising a compound of the invention in combination with at least one additional pharmaceutically acceptable carrier. A "pharmaceutically acceptable carrier" refers to media generally accepted in the art for the delivery of biologically active agents to animals, in particular, 30 mammals, including, *i.e.*, adjuvant, excipient or vehicle, such as diluents, preserving

agents, fillers, flow regulating agents, disintegrating agents, wetting agents, emulsifying agents, suspending agents, sweetening agents, flavoring agents, perfuming agents, antibacterial agents, antifungal agents, lubricating agents and dispensing agents, depending on the nature of the mode of administration and dosage forms.

- 5    Pharmaceutically-acceptable carriers are formulated according to a number of factors well within the purview of those of ordinary skill in the art. These include, without limitation: the type and nature of the active agent being formulated; the subject to which the agent-containing composition is to be administered; the intended route of administration of the composition; and the therapeutic indication being targeted.
- 10    Pharmaceutically-acceptable carriers include both aqueous and non-aqueous liquid media, as well as a variety of solid and semi-solid dosage forms. Such carriers can include a number of different ingredients and additives in addition to the active agent, such additional ingredients being included in the formulation for a variety of reasons, e.g., stabilization of the active agent, binders, etc., well known to those of ordinary skill
- 15    in the art. Descriptions of suitable pharmaceutically acceptable carriers, and factors involved in their selection, are found in a variety of readily available sources such as, for example, *Remington's Pharmaceutical Sciences*, 18th Edition (1990).

The dosage regimen for the compounds of the present invention will, of course, vary depending upon known factors, such as the pharmacodynamic characteristics of the

20    particular agent and its mode and route of administration; the species, age, sex, health, medical condition, and weight of the recipient; the nature and extent of the symptoms; the kind of concurrent treatment; the frequency of treatment; the route of administration, the renal and hepatic function of the patient, and the effect desired. A physician or veterinarian can determine and prescribe the effective amount of the drug required to

25    prevent, counter, or arrest the progress of the thromboembolic disorder.

By way of general guidance, the daily oral dosage of each active ingredient, when used for the indicated effects, will range between about 0.001 to about 1000 mg/kg of body weight, preferably between about 0.01 to about 100 mg/kg of body weight per day, and most preferably between about 0.1 to about 20 mg/kg/day. Intravenously, the most

30    preferred doses will range from about 0.001 to about 10 mg/kg/minute during a constant rate infusion. Compounds of this invention may be administered in a single daily dose, or

the total daily dosage may be administered in divided doses of two, three, or four times daily.

Compounds of this invention can also be administered by parenteral administration (*e.g.*, intra-venous, intra-arterial, intramuscularly, or subcutaneously).

5 When administered intra-venous or intra-arterial, the dose can be given continuously or intermittent. Furthermore, formulation can be developed for intramuscularly and subcutaneous delivery that ensure a gradual release of the active pharmaceutical ingredient. In one embodiment, the pharmaceutical composition is a solid formulation, *e.g.*, a spray-dried composition, which may be used as is, or whereto the physician or the  
10 patient adds solvents, and/or diluents prior to use.

Compounds of this invention can be administered in intranasal form via topical use of suitable intranasal vehicles, or via transdermal routes, using transdermal skin patches. When administered in the form of a transdermal delivery system, the dosage administration will, of course, be continuous rather than intermittent throughout the  
15 dosage regimen.

The compounds are typically administered in admixture with suitable pharmaceutical diluents, excipients, or carriers (collectively referred to herein as pharmaceutical carriers) suitably selected with respect to the intended form of administration, *e.g.*, oral tablets, capsules, elixirs, and syrups, and consistent with  
20 conventional pharmaceutical practices.

For instance, for oral administration in the form of a tablet or capsule, the active drug component can be combined with an oral, non-toxic, pharmaceutically acceptable, inert carrier such as lactose, starch, sucrose, glucose, methyl cellulose, magnesium stearate, dicalcium phosphate, calcium sulfate, mannitol, sorbitol and the like; for oral  
25 administration in liquid form, the oral drug components can be combined with any oral, non-toxic, pharmaceutically acceptable inert carrier such as ethanol, glycerol, water, and the like. Moreover, when desired or necessary, suitable binders, lubricants, disintegrating agents, and coloring agents can also be incorporated into the mixture. Suitable binders include starch, gelatin, natural sugars such as glucose or beta-lactose, corn sweeteners, natural and synthetic gums such as acacia, tragacanth, or sodium alginate,  
30 carboxymethylcellulose, polyethylene glycol, waxes, and the like. Lubricants used in these dosage forms include sodium oleate, sodium stearate, magnesium stearate, sodium

benzoate, sodium acetate, sodium chloride, and the like. Disintegrators include, without limitation, starch, methyl cellulose, agar, bentonite, xanthan gum, and the like.

The compounds of the present invention can also be administered in the form of liposome delivery systems, such as small unilamellar vesicles, large unilamellar vesicles, 5 and multilamellar vesicles. Liposomes can be formed from a variety of phospholipids, such as cholesterol, stearylamine, or phosphatidylcholines.

Compounds of the present invention may also be coupled with soluble polymers as targetable drug carriers. Such polymers can include polyvinylpyrrolidone, pyran copolymer, polyhydroxypropylmethacrylamide-phenol,

10 polyhydroxyethylaspartamidephenol, or polyethyleneoxide-polylysine substituted with palmitoyl residues. Furthermore, the compounds of the present invention may be coupled to a class of biodegradable polymers useful in achieving controlled release of a drug, for example, polylactic acid, polyglycolic acid, copolymers of polylactic and polyglycolic acid, polyepsilon caprolactone, polyhydroxy butyric acid, polyorthoesters, polyacetals, 15 polydihydropyrans, polycyanoacylates, and crosslinked or amphipathic block copolymers of hydrogels. Solid dispersions are also called solid-state dispersions. In some embodiments, any compound described herein is formulated as a spray dried dispersion (SDD). An SDD is a single phase amorphous molecular dispersion of a drug in a polymer matrix. It is a solid solution prepared by dissolving the drug and a polymer in a 20 solvent (e.g., acetone, methanol or the like) and spray drying the solution. The solvent rapidly evaporates from droplets which rapidly solidifies the polymer and drug mixture trapping the drug in amorphous form as an amorphous molecular dispersion.

Dosage forms (pharmaceutical compositions) suitable for administration may contain from about 1 milligram to about 1000 milligrams of active ingredient per dosage 25 unit. In these pharmaceutical compositions the active ingredient will ordinarily be present in an amount of about 0.1-95% by weight based on the total weight of the composition.

Gelatin capsules may contain the active ingredient and powdered carriers, such as lactose, starch, cellulose derivatives, magnesium stearate, stearic acid, and the like. 30 Similar diluents can be used to make compressed tablets. Both tablets and capsules can be manufactured as sustained release products to provide for continuous release of medication over a period of hours. Compressed tablets can be sugar coated or film coated

to mask any unpleasant taste and protect the tablet from the atmosphere, or enteric coated for selective disintegration in the gastrointestinal tract.

Liquid dosage forms for oral administration can contain coloring and flavoring to increase patient acceptance.

5 In general, water, a suitable oil, saline, aqueous dextrose (glucose), and related sugar solutions and glycols such as propylene glycol or polyethylene glycols are suitable carriers for parenteral solutions. Solutions for parenteral administration preferably contain a water soluble salt of the active ingredient, suitable stabilizing agents, and if necessary, buffer substances. Antioxidizing agents such as sodium bisulfite, sodium  
10 sulfite, or ascorbic acid, either alone or combined, are suitable stabilizing agents. Also used are citric acid and its salts and sodium EDTA. In addition, parenteral solutions can contain preservatives, such as benzalkonium chloride, methyl-or propyl-paraben, and chlorobutanol.

15 Suitable pharmaceutical carriers are described in *Remington's Pharmaceutical Sciences*, Mack Publishing Company, a standard reference text in this field.

Where the compounds of this invention are combined with other anticoagulant agents, for example, a daily dosage may be about 0.1 to about 100 milligrams of the compound of the present invention and about 0.1 to about 100 milligrams per kilogram of patient body weight. For a tablet dosage form, the compounds of this invention generally  
20 may be present in an amount of about 5 to about 300 milligrams per dosage unit, and the second anti-coagulant in an amount of about 1 to about 500 milligrams per dosage unit.

Where the compounds of the present invention are administered in combination with an anti-platelet agent, by way of general guidance, typically a daily dosage may be about 0.01 to about 300 milligrams of the compound of the present invention and about  
25 50 to about 150 milligrams of the anti-platelet agent, preferably about 0.1 to about 4 milligrams of the compound of the present invention and about 1 to about 3 milligrams of antiplatelet agents, per kilogram of patient body weight.

Where the compounds of the present invention are administered in combination with thrombolytic agent, typically a daily dosage may be about 0.1 to about 100  
30 milligrams of the compound of the present invention, per kilogram of patient body weight and, in the case of the thrombolytic agents, the usual dosage of the thrombolytic agent

when administered alone may be reduced by about 50-80% when administered with a compound of the present invention.

Particularly when provided as a single dosage unit, the potential exists for a chemical interaction between the combined active ingredients. For this reason, when the 5 compound of the present invention and a second therapeutic agent are combined in a single dosage unit they are formulated such that although the active ingredients are combined in a single dosage unit, the physical contact between the active ingredients is minimized (that is, reduced). For example, one active ingredient may be enteric coated. By enteric coating one of the active ingredients, it is possible not only to minimize the 10 contact between the combined active ingredients, but also, it is possible to control the release of one of these components in the gastrointestinal tract such that one of these components is not released in the stomach but rather is released in the intestines. One of the active ingredients may also be coated with a material that affects a sustained-release throughout the gastrointestinal tract and also serves to minimize physical contact between 15 the combined active ingredients. Furthermore, the sustained-released component can be additionally enteric coated such that the release of this component occurs only in the intestine. Still another approach would involve the formulation of a combination product in which the one component is coated with a sustained and/or enteric release polymer, and the other component is also coated with a polymer such as a low viscosity grade of 20 hydroxypropyl methylcellulose (HPMC) or other appropriate materials as known in the art, in order to further separate the active components. The polymer coating serves to form an additional barrier to interaction with the other component.

These as well as other ways of minimizing contact between the components of combination products of the present invention, whether administered in a single dosage 25 form or administered in separate forms but at the same time by the same manner, will be readily apparent to those skilled in the art, once armed with the present disclosure.

In another embodiment, the present invention provides a pharmaceutical composition further comprising additional therapeutic agent(s) selected from potassium channel openers, potassium channel blockers, calcium channel blockers, sodium 30 hydrogen exchanger inhibitors, antiarrhythmic agents, antiatherosclerotic agents, anticoagulants, antithrombotic agents, prothrombolytic agents, fibrinogen antagonists, diuretics, antihypertensive agents, ATPase inhibitors, mineralocorticoid receptor

antagonists, phosphodiesterase inhibitors, antidiabetic agents, anti-inflammatory agents, antioxidants, angiogenesis modulators, antiosteoporosis agents, hormone replacement therapies, hormone receptor modulators, oral contraceptives, antiobesity agents, antidepressants, antianxiety agents, antipsychotic agents, antiproliferative agents,

5 antitumor agents, antiulcer and gastroesophageal reflux disease agents, growth hormone agents and/or growth hormone secretagogues, thyroid mimetics, anti-infective agents, antiviral agents, antibacterial agents, antifungal agents, cholesterol/lipid lowering agents and lipid profile therapies, and agents that mimic ischemic preconditioning and/or myocardial stunning, or a combination thereof.

10 In another embodiment, the present invention provides a pharmaceutical composition further comprising additional therapeutic agent(s) selected from an anti-arrhythmic agent, an anti-hypertensive agent, an anti-coagulant agent, an anti-platelet agent, a thrombin inhibiting agent, a thrombolytic agent, a fibrinolytic agent, a calcium channel blocker, a potassium channel blocker, a cholesterol/lipid lowering agent, or a  
15 combination thereof.

In another embodiment, the present invention provides a pharmaceutical composition further comprising additional therapeutic agent(s) selected from warfarin, unfractionated heparin, low molecular weight heparin, synthetic pentasaccharide, hirudin, argatroban, aspirin, ibuprofen, naproxen, sulindac, indomethacin, mefenamate,  
20 dipyridamol, droxicam, diclofenac, sulfinpyrazone, piroxicam, ticlopidine, clopidogrel, tirofiban, eptifibatide, abciximab, melagatran, ximelagatran, disulfatohirudin, tissue plasminogen activator, modified tissue plasminogen activator, anistreplase, urokinase, and streptokinase, or a combination thereof.

In another embodiment, the present invention provides a pharmaceutical composition wherein the additional therapeutic agent is an antihypertensive agent selected from ACE inhibitors, AT-1 receptor antagonists, beta-adrenergic receptor antagonists, ETA receptor antagonists, dual ETA/AT-1 receptor antagonists, renin inhibitors (aliskiren) and vasopepsidase inhibitors, an antiarrhythmic agent selected from I<sub>Kur</sub> inhibitors, an anticoagulant selected from thrombin inhibitors, antithrombin-III activators, heparin co-factor II activators, other factor XIa inhibitors, other kallikrein inhibitors, plasminogen activator inhibitor (PAI-1) antagonists, thrombin activatable fibrinolysis inhibitor (TAFI) inhibitors, factor VIIa inhibitors, factor IXa inhibitors, and

factor Xa inhibitors, or an antiplatelet agent selected from GPIIb/IIIa blockers, GP Ib/IX blockers, protease activated receptor 1 (PAR-1) antagonists, protease activated receptor4 (PAR-4) antagonists, prostaglandin E2 receptor EP3 antagonists, collagen receptor antagonists, phosphodiesterase-III inhibitors, P2Y<sub>1</sub> receptor antagonists, P2Y<sub>12</sub> antagonists, thromboxane receptor antagonists, cyclooxygenase-1 inhibitors, and aspirin, or a combination thereof.

In another embodiment, the present invention provides pharmaceutical composition, wherein the additional therapeutic agent(s) are an anti-platelet agent or a combination thereof.

10 In another embodiment, the present invention provides a pharmaceutical composition, wherein the additional therapeutic agent is the anti-platelet agent clopidogrel.

15 The compounds of the present invention can be administered alone or in combination with one or more additional therapeutic agents. By "administered in combination" or "combination therapy" it is meant that the compound of the present invention and one or more additional therapeutic agents are administered concurrently to the mammal being treated. When administered in combination, each component may be administered at the same time or sequentially in any order at different points in time. Thus, each component may be administered separately but sufficiently closely in time so 20 as to provide the desired therapeutic effect.

Compounds that can be administered in combination with the compounds of the present invention include, but are not limited to, anticoagulants, anti-thrombin agents, anti-platelet agents, fibrinolytics, hypolipidemic agents, antihypertensive agents, and anti-ischemic agents.

25 Other anticoagulant agents (or coagulation inhibitory agents) that may be used in combination with the compounds of this invention include warfarin, heparin (either unfractionated heparin or any commercially available low molecular weight heparin, for example, LOVENOX®), synthetic pentasaccharide, direct acting thrombin inhibitors including hirudin and argatroban, as well as other factor VIIa inhibitors, factor IXa inhibitors, factor Xa inhibitors (*e.g.*, ARIXTRA®, apixaban, rivaroxaban, LY-517717, DU-176b, DX-9065a, and those disclosed in WO 98/57951, WO 03/026652,

WO 01/047919, and WO 00/076970), factor XIa inhibitors, and inhibitors of activated TAFI and PAI-1 known in the art.

The term anti-platelet agents (or platelet inhibitory agents), as used herein, denotes agents that inhibit platelet function, for example, by inhibiting the aggregation, adhesion or granule-content secretion of platelets. Such agents include, but are not limited to, the various known non-steroidal anti-inflammatory drugs (NSAIDs) such as acetaminophen, aspirin, codeine, diclofenac, droxicam, fentanyl, ibuprofen, indomethacin, ketorolac, mefenamate, morphine, naproxen, phenacetin, piroxicam, sufentanyl, sulfinpyrazone, sulindac, and pharmaceutically acceptable salts or prodrugs thereof. Of the NSAIDs, aspirin (acetylsalicylic acid or ASA) and piroxicam are preferred. Other suitable platelet inhibitory agents include glycoprotein IIb/IIIa antagonists (*e.g.*, tirofiban, eptifibatide, abciximab, and integrilin), thromboxane-A2-receptor antagonists (*e.g.*, ifetroban), thromboxane-A-synthetase inhibitors, phosphodiesterase-III (PDE-III) inhibitors (*e.g.*, dipyridamole, cilostazol), and PDE-V inhibitors (such as sildenafil), protease-activated receptor 1 (PAR-1) antagonists (*e.g.*, E-5555, SCH-530348, SCH-203099, SCH-529153 and SCH-205831), and pharmaceutically acceptable salts or prodrugs thereof.

Other examples of suitable anti-platelet agents for use in combination with the compounds of the present invention, with or without aspirin, are ADP (adenosine diphosphate) receptor antagonists, preferably antagonists of the purinergic receptors P2Y<sub>1</sub> and P2Y<sub>12</sub>, with P2Y<sub>12</sub> being even more preferred. Preferred P2Y<sub>12</sub> receptor antagonists include clopidogrel, ticlopidine, prasugrel, ticagrelor, and cangrelor, and pharmaceutically acceptable salts or prodrugs thereof. Ticlopidine and clopidogrel are also preferred compounds since they are known to be more gentle than aspirin on the gastro-intestinal tract in use. Clopidogrel is an even more preferred agent.

A preferred example is a triple combination of a compound of the present invention, aspirin, and another anti-platelet agent. Preferably, the anti-platelet agent is clopidogrel or prasugrel, more preferably clopidogrel.

The term thrombin inhibitors (or anti-thrombin agents), as used herein, denotes inhibitors of the serine protease thrombin. By inhibiting thrombin, various thrombin-mediated processes, such as thrombin-mediated platelet activation (that is, for example, the aggregation of platelets, and/or the secretion of platelet granule contents including

serotonin) and/or fibrin formation are disrupted. A number of thrombin inhibitors are known to one of skill in the art and these inhibitors are contemplated to be used in combination with the present compounds. Such inhibitors include, but are not limited to, boroarginine derivatives, boropeptides, heparins, hirudin, argatroban, dabigatran,  
5 AZD-0837, and those disclosed in WO 98/37075 and WO 02/044145, and pharmaceutically acceptable salts and prodrugs thereof. Boroarginine derivatives and boropeptides include N-acetyl and peptide derivatives of boronic acid, such as C-terminal α-aminoboronic acid derivatives of lysine, ornithine, arginine, homoarginine and corresponding isothiouronium analogs thereof. The term hirudin, as used herein, includes  
10 suitable derivatives or analogs of hirudin, referred to herein as hirulogs, such as disulfatohirudin.

The term thrombolytic (or fibrinolytic) agents (or thrombolytics or fibrinolytics), as used herein, denotes agents that lyse blood clots (thrombi). Such agents include tissue plasminogen activator (TPA, natural or recombinant) and modified forms thereof,  
15 anistreplase, urokinase, streptokinase, tenecteplase (TNK), lanoteplase (nPA), factor VIIa inhibitors, thrombin inhibitors, inhibitors of factors IXa, Xa, and XIa, PAI-I inhibitors (*i.e.*, inactivators of tissue plasminogen activator inhibitors), inhibitors of activated TAFI, alpha-2-antiplasmin inhibitors, and anisoylated plasminogen streptokinase activator complex, including pharmaceutically acceptable salts or prodrugs thereof. The term  
20 anistreplase, as used herein, refers to anisoylated plasminogen streptokinase activator complex, as described, for example, in European Patent Application No. 028489, the disclosure of which is hereby incorporated herein by reference herein. The term urokinase, as used herein, is intended to denote both dual and single chain urokinase, the latter also being referred to herein as prourokinase.

25 Examples of suitable cholesterol/lipid lowering agents and lipid profile therapies for use in combination with the compounds of the present invention include HMG-CoA reductase inhibitors (*e.g.*, pravastatin, lovastatin, simvastatin, fluvastatin, atorvastatin, rosuvastatin, and other statins), low-density lipoprotein (LDL) receptor activity modulators (*e.g.*, HOE-402, PCSK9 inhibitors), bile acid sequestrants (*e.g.*,  
30 cholestyramine and colestipol), nicotinic acid or derivatives thereof (*e.g.*, NIASPAN®), GPR109B (nicotinic acid receptor) modulators, fenofibric acid derivatives (*e.g.*, gemfibrozil, clofibrate, fenofibrate and benzafibrate) and other peroxisome proliferator-

activated receptors (PPAR) alpha modulators, PPARdelta modulators (*e.g.*, GW-501516), PPARgamma modulators (*e.g.*, rosiglitazone), compounds that have multiple functionality for modulating the activities of various combinations of PPARalpha, PPARgamma and PPARdelta, probucol or derivatives thereof (*e.g.*, AGI-1067),  
5 cholesterol absorption inhibitors and/or Niemann-Pick C1-like transporter inhibitors (*e.g.*, ezetimibe), cholesterol ester transfer protein inhibitors (*e.g.*, CP-529414), squalene synthase inhibitors and/or squalene epoxidase inhibitors or mixtures thereof, acyl coenzyme A: cholesterol acyltransferase (ACAT) 1 inhibitors, ACAT2 inhibitors, dual ACAT1/2 inhibitors, ileal bile acid transport inhibitors (or apical sodium co-dependent  
10 bile acid transport inhibitors), microsomal triglyceride transfer protein inhibitors, liver-X-receptor (LXR) alpha modulators, LXRbeta modulators, LXR dual alpha/beta modulators, FXR modulators, omega 3 fatty acids (*e.g.*, 3-PUFA), plant stanols and/or fatty acid esters of plant stanols (*e.g.*, sitostanol ester used in BENECOL® margarine), endothelial lipase inhibitors, and HDL functional mimetics which activate reverse  
15 cholesterol transport (*e.g.*, apoAI derivatives or apoAI peptide mimetics).

The compounds of the present invention are also useful as standard or reference compounds, for example, as a quality standard or control, in tests or assays involving the inhibition of thrombin, Factor VIIa, IXa, Xa, XIa, and/or plasma kallikrein. Such compounds may be provided in a commercial kit, for example, for use in pharmaceutical research involving thrombin, Factor VIIa, IXa, Xa, XIa, and/or plasma kallikrein. XIa.  
20 For example, a compound of the present invention could be used as a reference in an assay to compare its known activity to a compound with an unknown activity. This would ensure the experimentor that the assay was being performed properly and provide a basis for comparison, especially if the test compound was a derivative of the reference  
25 compound. When developing new assays or protocols, compounds according to the present invention could be used to test their effectiveness.

The compounds of the present invention may also be used in diagnostic assays involving thrombin, Factor VIIa, IXa, Xa, XIa, and/or plasma kallikrein. For example, the presence of thrombin, Factor VIIa, IXa, Xa XIa, and/or plasma kallikrein in an unknown sample could be determined by addition of the relevant chromogenic substrate, for example, S2366 for Factor XIa, to a series of solutions containing test sample and optionally one of the compounds of the present invention. If production of pNA is  
30

observed in the solutions containing test sample, but not in the presence of a compound of the present invention, then one would conclude Factor XIa was present.

Extremely potent and selective compounds of the present invention, those having  $K_i$  values less than or equal to 0.001  $\mu\text{M}$  against the target protease and greater than or equal to 0.1  $\mu\text{M}$  against the other proteases, may also be used in diagnostic assays involving the quantitation of thrombin, Factor VIIa, IXa, Xa, XIa, and/or plasma kallikrein in serum samples. For example, the amount of Factor XIa in serum samples could be determined by careful titration of protease activity in the presence of the relevant chromogenic substrate, S2366, with a potent Factor XIa inhibitor of the present invention.

The present invention also encompasses an article of manufacture. As used herein, article of manufacture is intended to include, but not be limited to, kits and packages. The article of manufacture of the present invention, comprises: (a) a first container; (b) a pharmaceutical composition located within the first container, wherein the composition, comprises: a first therapeutic agent, comprising: a compound of the present invention or a pharmaceutically acceptable salt form thereof; and, (c) a package insert stating that the pharmaceutical composition can be used for the treatment of a thromboembolic and/or inflammatory disorder (as defined previously). In another embodiment, the package insert states that the pharmaceutical composition can be used in combination (as defined previously) with a second therapeutic agent to treat a thromboembolic and/or inflammatory disorder. The article of manufacture can further comprise: (d) a second container, wherein components (a) and (b) are located within the second container and component (c) is located within or outside of the second container. Located within the first and second containers means that the respective container holds the item within its boundaries.

The first container is a receptacle used to hold a pharmaceutical composition. This container can be for manufacturing, storing, shipping, and/or individual/bulk selling. First container is intended to cover a bottle, jar, vial, flask, syringe, tube (*e.g.*, for a cream preparation), or any other container used to manufacture, hold, store, or distribute a pharmaceutical product.

The second container is one used to hold the first container and, optionally, the package insert. Examples of the second container include, but are not limited to, boxes (*e.g.*, cardboard or plastic), crates, cartons, bags (*e.g.*, paper or plastic bags), pouches, and

sacks. The package insert can be physically attached to the outside of the first container via tape, glue, staple, or another method of attachment, or it can rest inside the second container without any physical means of attachment to the first container. Alternatively, the package insert is located on the outside of the second container. When located on the 5 outside of the second container, it is preferable that the package insert is physically attached via tape, glue, staple, or another method of attachment. Alternatively, it can be adjacent to or touching the outside of the second container without being physically attached.

The package insert is a label, tag, marker, etc. that recites information relating to 10 the pharmaceutical composition located within the first container. The information recited will usually be determined by the regulatory agency governing the area in which the article of manufacture is to be sold (e.g., the United States Food and Drug Administration). Preferably, the package insert specifically recites the indications for 15 which the pharmaceutical composition has been approved. The package insert may be made of any material on which a person can read information contained therein or thereon. Preferably, the package insert is a printable material (e.g., paper, plastic, cardboard, foil, adhesive-backed paper or plastic, etc.) on which the desired information has been formed (e.g., printed or applied).

Other features of the invention will become apparent in the course of the 20 following descriptions of exemplary embodiments that are given for illustration of the invention and are not intended to be limiting thereof. The following Examples have been prepared, isolated and characterized using the methods disclosed herein.

## VI. GENERAL SYNTHESIS INCLUDING SCHEMES

The compounds of the present invention may be synthesized by many methods 25 available to those skilled in the art of organic chemistry (Maffrand, J.P. et al., *Heterocycles*, 16(1):35-37 (1981)). General synthetic schemes for preparing compounds of the present invention are described below. These schemes are illustrative and are not meant to limit the possible techniques one skilled in the art may use to prepare the 30 compounds disclosed herein. Different methods to prepare the compounds of the present invention will be evident to those skilled in the art. Additionally, the various steps in the

synthesis may be performed in an alternate sequence in order to give the desired compound or compounds.

Examples of compounds of the present invention prepared by methods described in the general schemes are given in the intermediates and examples section set out hereinafter. Preparation of homochiral examples may be carried out by techniques known to one skilled in the art. For example, homochiral compounds may be prepared by separation of racemic products by chiral phase preparative HPLC. Alternatively, the example compounds may be prepared by methods known to give enantiomerically enriched products. These include, but are not limited to, the incorporation of chiral auxiliary functionalities into racemic intermediates which serve to control the diastereoselectivity of transformations, providing enantio-enriched products upon cleavage of the chiral auxiliary.

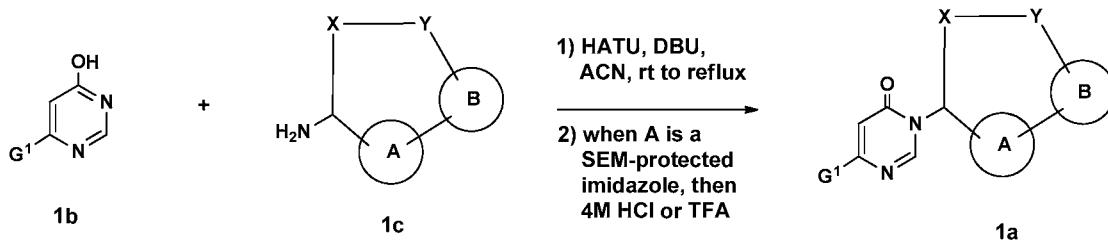

The compounds of the present invention can be prepared in a number of ways known to one skilled in the art of organic synthesis. The compounds of the present invention can be synthesized using the methods described below, together with synthetic methods known in the art of synthetic organic chemistry, or by variations thereon as appreciated by those skilled in the art. Preferred methods include, but are not limited to, those described below. The reactions are performed in a solvent or solvent mixture appropriate to the reagents and materials employed and suitable for the transformations being effected. It will be understood by those skilled in the art of organic synthesis that the functionality present on the molecule should be consistent with the transformations proposed. This will sometimes require a judgment to modify the order of the synthetic steps or to select one particular process scheme over another in order to obtain a desired compound of the invention.

It will also be recognized that another major consideration in the planning of any synthetic route in this field is the judicious choice of the protecting group used for protection of the reactive functional groups present in the compounds described in this invention. An authoritative account describing the many alternatives to the trained practitioner is Greene et al. (*Protective Groups in Organic Synthesis*, Fourth Edition, Wiley-Interscience (2006)).

Representative pyrimidinone compounds **1a** of this invention can be prepared as described in Scheme 1. Using a modified procedure described by Xiao (*Org. Lett.*, 11:1421 (2009)), suitably substituted pyrimidin-4-ol derivatives **1b** can be coupled with an appropriately substituted macrocycle amine **1c** in the presence of HATU and DBU in a solvent such as CH<sub>3</sub>CN to provide pyrimidinone compounds **1a**. When ring A is a SEM-protected imidazole ring, an additional deprotection step employing 4M HCl in dioxane or TFA in DCM is required to afford compounds of this invention.

10

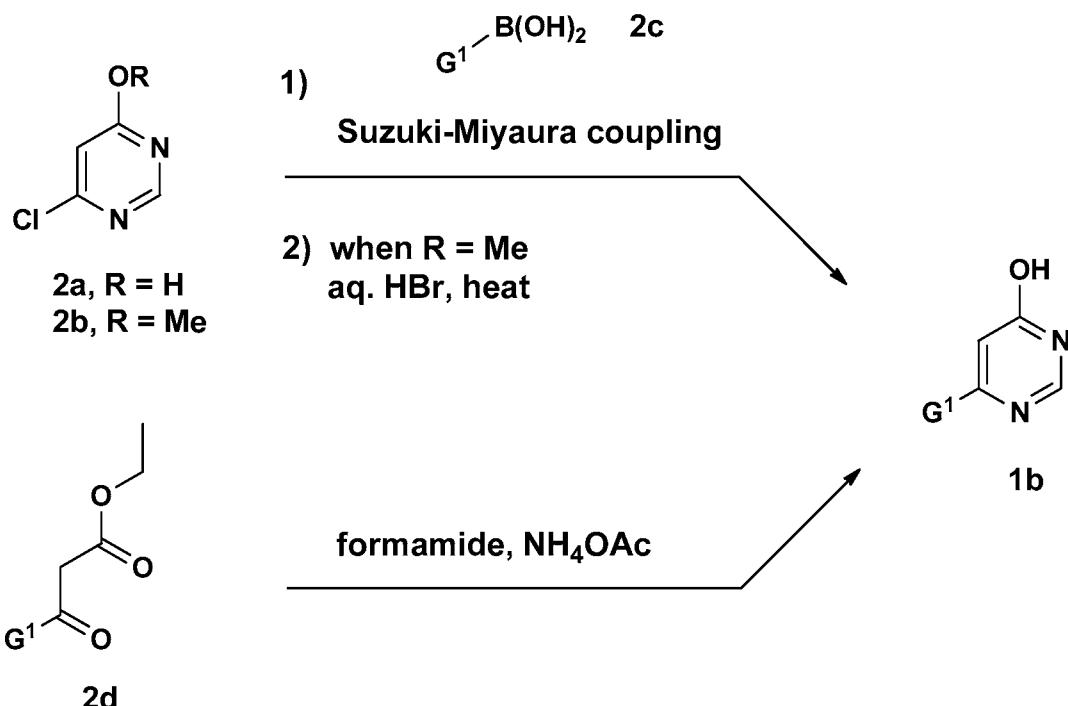

Scheme 1

20

Scheme 2 describes the synthesis of suitably substituted pyrimidin-4-ol derivatives **1b**. Suzuki-Miyaura coupling between 6-chloropyrimidin-4-ol (**2a**) and an appropriately substituted aryl or heteroaryl boronic acid or ester **2c** in the presence of a base such as Hunig's base or potassium phosphate tribasic, in a solvent mixture, such as toluene and ethanol, or THF, using a precatalyst such as Pd(PPh<sub>3</sub>)<sub>4</sub> or 2<sup>nd</sup> generation XPhos provides **1b**. Alternatively, when 4-chloro-6-methoxypyrimidine **2b** is used, an additional deprotection step, employing aqueous HBr at elevated temperatures, is required to provide pyrimidin-4-ol derivatives **1b**.

Scheme 2

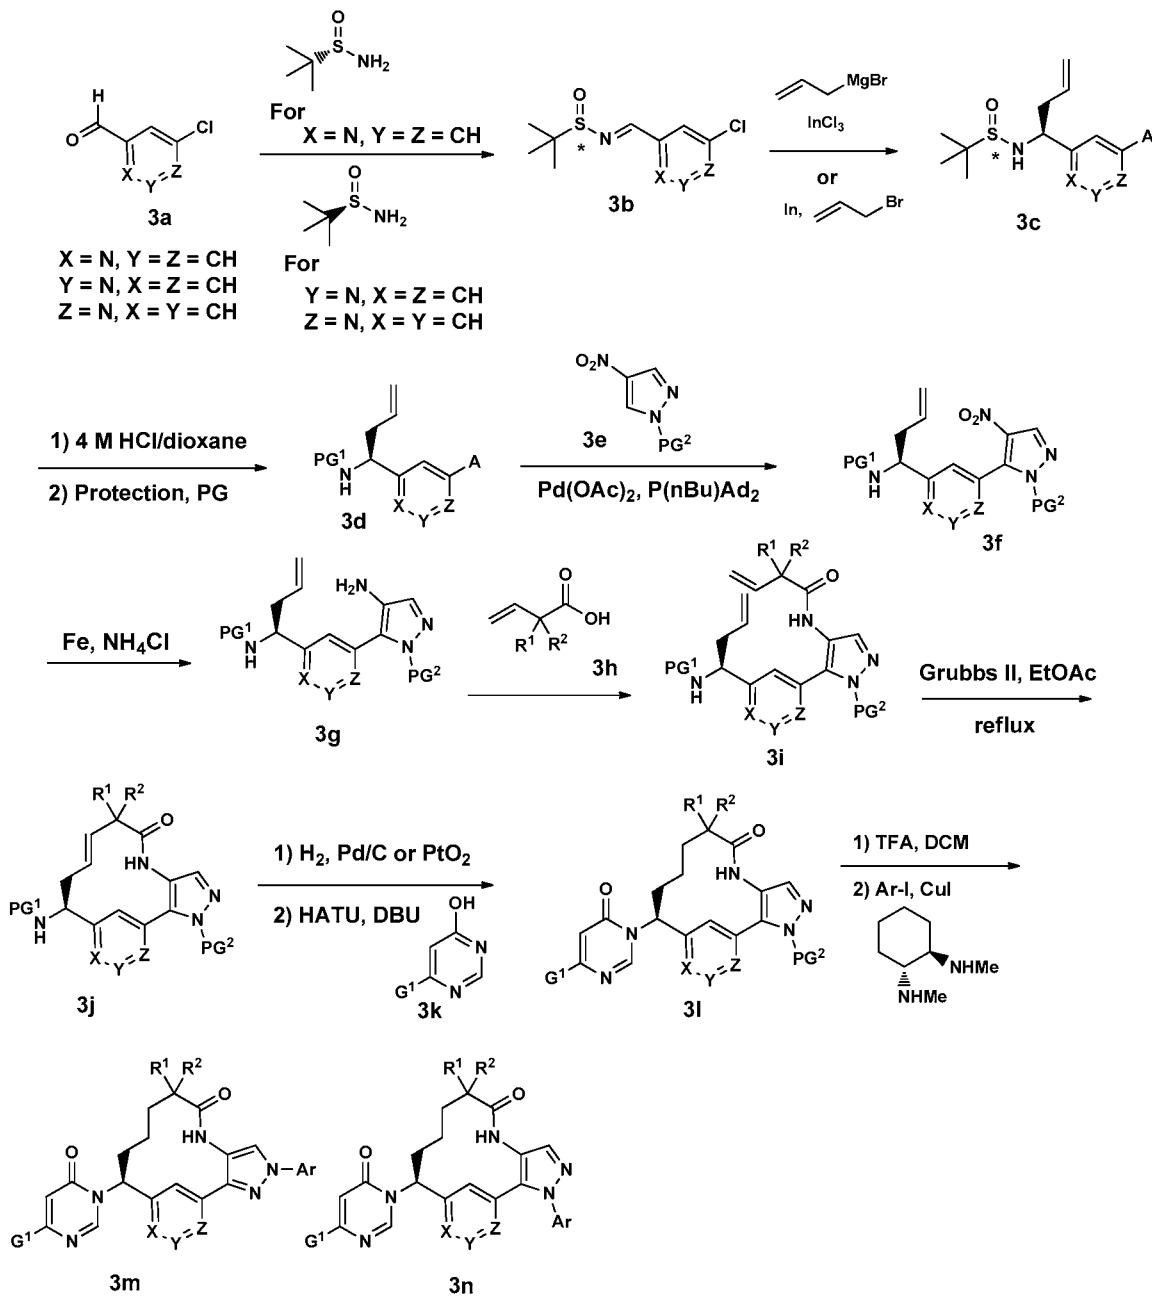

Intermediates for preparation of compounds of the present invention wherein ring

- 5 A is a 6-membered heterocycle (example - pyridine) can be derived from appropriately substituted aldehydes **3a** according to the general method outlined in Scheme 3.
- Condensation of aldehyde **3a** ( $\text{X} = \text{N}$ ) prepared according to a modified procedure described by Negi (*Synthesis*, 991 (1996)), with (S)-2-methylpropane-2-sulfinamide in the presence of anhydrous copper sulfate or cesium carbonate in a solvent such as DCM
- 10 gives the sulfinimine **3b** (Ellman, J., *J. Org. Chem.*, 64:1278 (1999)). Using a modified procedure described by Kuduk (*Tetrahedron Letters*, 45:6641 (2004)), suitably substituted Grignard reagents, for example, allylmagnesium bromide, can be added to sulfinimine **3b** to give a sulfinamide **3c**, as a mixture of diastereomers which can be separated at various stages of the sequence. The diastereoselectivity for the addition of
- 15 ally magnesium bromide to sulfinimine **3b** can be improved by employing indium(III) chloride according to a modified procedure of Xu (Xu, M.-H., *Org. Lett.*, 10(6):1259 (2008)). Protecting group interconversion can be accomplished in two steps to give **3d**. The critical subunit coupling is accomplished via methodology developed by Sames (*J. Am. Chem. Soc.*, 131:3042 (2009)). Treatment of chloropyridine **3d** with N-protected
- 20 nitropyrazole **3e** in the presence of catalytic  $\text{Pd}(\text{OAc})_2$  and  $\text{P}(\text{nBu})\text{Ad}_2$  forges the desired

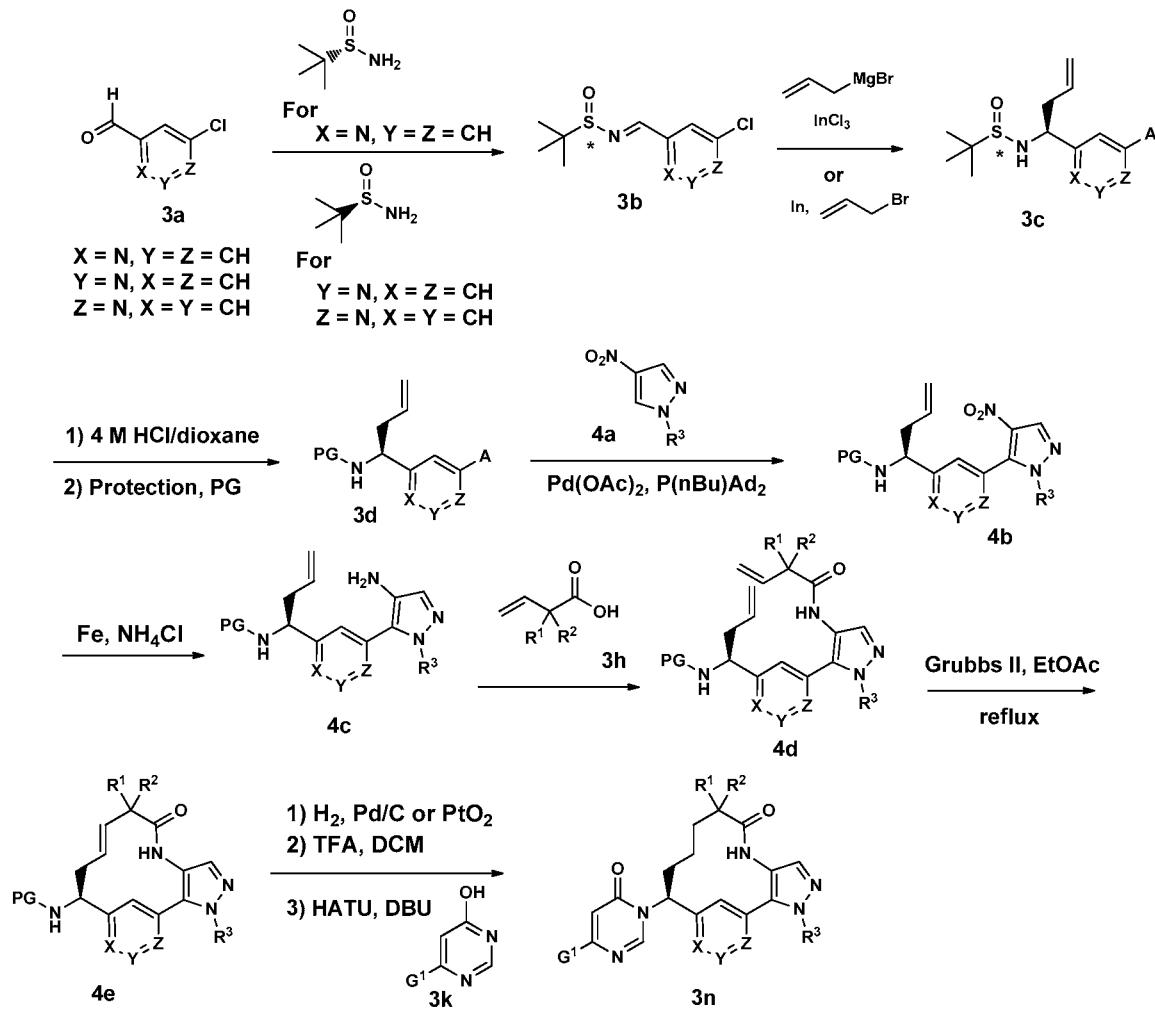

arylpyrazole bond, forming **3f**. Reduction of this nitropyrazole yields **3g**. This aminopyrazole can then be coupled with an appropriately substituted carboxylic acid **3h** using T3P® and a base, such as pyridine, to give the amide **3i**. The diene can be cyclized via ring-closing metathesis using a catalyst, such as Grubbs (II), in a suitable solvent, such as EtOAc at elevated temperature, to give the pyridine-containing macrocycle **3j**. The alkene can be reduced with hydrogen over either palladium on carbon or platinum oxide. The second coupling reaction is then carried out as described in Scheme 1 with pyrimidinol **3k** to yield pyrimidinone **3l**. Subsequent deprotection of the pyrazole with TFA in DCM or 4M HCl in dioxane provides followed by Ullmann coupling with an aryl iodide affords **3m** as a major regioisomer. If **3n** is formed, it is the minor component of the product mixture.

Scheme 3

Compounds like **3n** can be obtained as exclusive products following the synthetic procedures in Scheme 4. All operations are analogous to those in Scheme 3 up until the pyrazole coupling reaction. Appropriately substituted nitropyrazoles **4a** yield the shown regioisomeric pyrazoles **4b** under the same conditions described in Scheme 3. Reduction to **4c**, amidation with **3h** to form **4d**, and ring-closing metathesis to form macrocycle **4e** occur in a similar fashion as well. Reduction of the olefin and deprotection are followed by pyrimidinol coupling, as described in Schemes 1 and 3.

Scheme 4

5 Methods for synthesis of a large variety of substituted pyridine compounds useful as starting materials for the preparation of compounds of the present invention are well known in the art and have been extensively reviewed. (For examples of methods useful for the preparation of pyridine starting materials see: Kroehnke, F., *Synthesis*, 1 (1976); Abramovitch, R.A., ed., "Pyridine and Its Derivatives", *The Chemistry of Heterocyclic Compounds*, 14(Suppl. 1-4), John Wiley & Sons, New York (1974); Boulton, A.J. et al., eds., *Comprehensive Heterocyclic Chemistry*, 2:165-524, Pergamon Press, New York (1984); McKillop, A., ed., *Comprehensive Heterocyclic Chemistry*, 5:1-300, Pergamon Press, New York (1996)).

10

Purification of intermediates and final products was carried out via either normal or reverse phase chromatography. Normal phase chromatography was carried out using pre-packed SiO<sub>2</sub> cartridges eluting with either gradients of hexanes and EtOAc or DCM and MeOH unless otherwise indicated. Reverse phase preparative HPLC was carried out  
5 using C18 columns eluting with gradients of Solvent A (90% water, 10% MeOH, 0.1% TFA) and Solvent B (10% water, 90% MeOH, 0.1% TFA, UV 220 nm) or with gradients of Solvent A (90% water, 10% ACN, 0.1% TFA) and Solvent B (10% water, 90% ACN, 0.1% TFA, UV 220 nm) or with gradients of Solvent A (98% water, 2% ACN, 0.05% TFA) and Solvent B (98% ACN, 2% water, 0.05% TFA, UV 220 nm) (or) SunFire Prep  
10 C18 OBD 5μ 30x100mm, 25 min gradient from 0-100% B. A = H<sub>2</sub>O/ACN/TFA 90:10:0.1. B = ACN/H<sub>2</sub>O/TFA 90:10:0.1.

Unless otherwise stated, analysis of final products was carried out by reverse phase analytical HPLC.

Method A: Waters SunFire column (3.5 μm C18, 3.0 x 150 mm). Gradient  
15 elution (0.5 mL/min) from 10-100% Solvent B for 12 min and then 100% Solvent B for 3 min was used. Solvent A is (95% water, 5% acetonitrile, 0.05% TFA) and Solvent B is (5% water, 95% acetonitrile, 0.05% TFA, UV 254 nm).

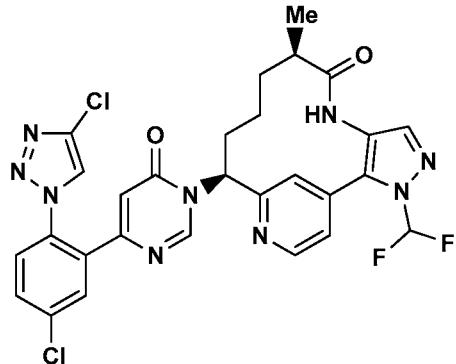

Method B: Waters Acquity UPLC BEH C18, 2.1 x 50 mm, 1.7-μm particles; Mobile Phase A: 5:95 acetonitrile:water with 10 mM ammonium acetate; Mobile Phase  
20 B: 95:5 acetonitrile:water with 10 mM ammonium acetate; Temperature: 50 °C; Gradient: 0-100% B over 3 minutes, then a 0.75-minute hold at 100% B; Flow: 1.11 mL/min.

Method C: Waters Acquity UPLC BEH C18, 2.1 x 50 mm, 1.7-μm particles; Mobile Phase A: 5:95 acetonitrile:water with 0.1% TFA; Mobile Phase B: 95:5 acetonitrile:water with 0.1% TFA; Temperature: 50 °C; Gradient: 0-100% B over 3  
25 minutes, then a 0.75-minute hold at 100% B; Flow: 1.11 mL/min.

Method X: ZORBAX® SB C18 column (4.6x75mm). Gradient elution (2.5 mL/min) from 0-100% Solvent B for 8 min and then 100% Solvent B for 2 min was used. Solvent A is (90% water, 10% MeOH, 0.02% H<sub>3</sub>PO<sub>4</sub>) and Solvent B is (10% water, 90% MeOH, 0.02% H<sub>3</sub>PO<sub>4</sub>, UV 220 nm).

## EXAMPLES

Example 1. Preparation of (*9R,13S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

1A. Preparation of 1-(difluoromethyl)-4-nitro-1*H*-pyrazole

$\text{Cs}_2\text{CO}_3$  (14.41 g, 44.2 mmol) was suspended in a solution of 4-nitro-1*H*-pyrazole (5.00 g, 44.2 mmol) and DMF (40 mL). After heating to 120 °C for 5 min, solid sodium 2-chloro-2,2-difluoroacetate (13.48 g, 88 mmol) was added in 10 equal portions over 20 min. The reaction was complete after 10 min of additional heating. The mixture was added to a separatory funnel containing 100 mL water and extracted with  $\text{Et}_2\text{O}$  (2 x 50 mL). The combined organic layers were concentrated. Purification by normal-phase chromatography eluting with a gradient of hexanes/EtOAc yielded 1-(difluoromethyl)-4-nitro-1*H*-pyrazole (6.99 g, 42.9 mmol, 97% yield) as a clear, colorless oil.  $^1\text{H}$  NMR (500MHz,  $\text{CDCl}_3$ )  $\delta$  8.58 (s, 1H), 8.22 (s, 1H), 7.39 - 7.05 (t,  $J$  = 60 Hz, 1H).

1B. Preparation of (*S*)-*tert*-butyl (1-(4-(1-(difluoromethyl)-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a  $\text{N}_2$  flushed, 500 mL RBF was added (*S*)-*tert*-butyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate, prepared as described in Example 3, (10 g, 35.4 mmol), 1-(difluoromethyl)-4-nitro-1*H*-pyrazole (6.34 g, 38.9 mmol) and dioxane (100 mL). The solution was bubbled with  $\text{N}_2$  for 5 min. Then  $\text{Pd}(\text{OAc})_2$  (0.40 g, 1.7 mmol), di(adamantan-1-yl)(butyl)phosphine (1.27 g, 3.5 mmol),  $\text{K}_2\text{CO}_3$  (14.7 g, 106 mmol) and PvOH (1.08 g, 10.61 mmol) were added. The reaction mixture was bubbled with  $\text{N}_2$  for 5

min then the reaction mixture was heated to 100 °C for 3 h. After this time, the solution was cooled to rt and water (200 mL) was added. The reaction mixture was then extracted with EtOAc (2 x 200 mL). The combined organic extracts were washed with water (200 mL), brine (200 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Purification 5 by normal phase chromatography eluting with a gradient of hexanes/EtOAc afforded (*S*)-*tert*-butyl (1-(4-(1-(difluoromethyl)-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (12.91 g, 31.5 mmol, 89% yield) as a slightly yellow oil. MS(ESI) *m/z*: 410.4 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.80 (dd, *J*=5.1, 0.7 Hz, 1H), 8.36 (s, 1H), 7.34 (s, 1H), 7.31 (dd, *J*=5.1, 1.5 Hz, 1H), 7.27 - 6.91 (t, *J*=58 Hz, 1H), 5.79 - 5.63 (m, 10 1H), 5.16 - 5.03 (m, 2H), 4.92 (d, *J*=5.9 Hz, 1H), 2.67 (t, *J*=6.4 Hz, 2H), 1.46 (br. s., 9H).

1C. Preparation of (*S*)-*tert*-butyl (1-(4-(4-amino-1-(difluoromethyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a 100 mL, 3-necked RBF was added a solution of (*S*)-*tert*-butyl (1-(4-(1-(difluoromethyl)-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (0.78 g, 15 1.90 mmol) in MeOH (12 mL) and a solution of NH<sub>4</sub>Cl (1.02 g, 19 mmol) in water (3 mL). To the solution was added Fe (0.53 g, 9.49 mmol). The reaction mixture was heated to 65 °C for 3 h. Water (50 mL) was added. After cooling to rt, the mixture was filtered through a CELITE® pad and rinsed with MeOH (200 mL). The filtrate was concentrated *in vacuo*. The residue was partitioned between EtOAC (100 mL) and water (100 mL). 20 The organic phase was separated, washed with water (100 mL), brine (100 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Purification by normal phase chromatography eluting with a gradient of DCM/MeOH yielded (*S*)-*tert*-butyl (1-(4-(4-amino-1-(difluoromethyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (0.585 25 g, 1.54 mmol, 81% yield) as an oil. MS(ESI) *m/z*: 380.1 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.70 (dd, *J*=5.0, 0.7 Hz, 1H), 7.43 (s, 1H), 7.36 (s, 1H), 7.32 (dd, *J*=5.1, 1.5 Hz, 1H), 7.28 - 6.97 (t, *J*=58 Hz, 1H), 5.80 - 5.66 (m, 1H), 5.65 - 5.53 (m, 1H), 5.13 - 5.03 (m, 2H), 4.87 (br. s., 1H), 3.22 (br. s., 2H), 2.65 (t, *J*=6.5 Hz, 2H), 1.52 - 1.37 (m, 9H).

1D. Preparation of *tert*-butyl ((*S*)-1-(4-(1-(difluoromethyl)-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a N<sub>2</sub> flushed, 3-necked, 250 mL RBF was added a solution of (*S*)-*tert*-butyl (1-(4-(4-amino-1-(difluoromethyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (5 g, 13.18 mmol) and EtOAc (50 ml). The solution was cooled to -10 °C and (*R*)-2-methylbut-3-enoic acid, as prepared in Example 2, (1.72 g, 17.13 mmol), pyridine (4.26 ml, 52.7 mmol), and T3P® (23.54 ml, 39.5 mmol) were added. The cooling bath was removed and the solution was allowed to warm to rt and then stir over a period of 20 h. Water (30 mL) and EtOAc (30 mL) were added and the mixture was stirred for 30 min.

10 The organic phase was separated and the aqueous layer was extracted with EtOAc (30 mL). The combined organic extracts were washed with brine (50 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Purification by normal phase chromatography eluting with a gradient of hexanes/EtOAc gave *tert*-butyl ((*S*)-1-(4-(1-(difluoromethyl)-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (5.69 g, 12.33 mmol, 94% yield). MS(ESI) *m/z*: 462.2 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.75 (dd, *J*=5.0, 0.6 Hz, 1H), 8.37 (s, 1H), 7.32 (t, *J*=59 Hz, 1H), 7.28 (br. s., 1H), 7.20 (s, 1H), 5.97 - 5.85 (m, 1H), 5.78 - 5.65 (m, 1H), 5.56 - 5.44 (m, 1H), 5.28 - 5.19 (m, 2H), 5.12 (d, *J*=2.0 Hz, 2H), 4.91 - 4.82 (m, 1H), 3.20 - 3.11 (m, 1H), 2.72 - 2.62 (m, 2H), 1.48 - 1.43 (s, 9H), 1.33 (d, *J*=6.8 Hz, 3H).

20

1E. Preparation of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate

To a N<sub>2</sub> flushed, 2 L, 3-necked, RBF was added a solution of *tert*-butyl ((*S*)-1-(4-(1-(difluoromethyl)-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (3 g, 6.50 mmol) in EtOAc (1300 ml). The solution was sparged with argon for 15 min. Grubbs II (1.38 g, 1.63 mmol) was added in one portion. The reaction mixture was heated to reflux for 24 h. After cooling to rt, the solvent was removed and the residue was purified by normal phase chromatography eluting with a gradient of DCM/MeOH to yield *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (2.13 g, 4.91 mmol, 76% yield) as a tan solid. MS(ESI) *m/z*: 434.4 [M+H]<sup>+</sup>.

<sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.71 (d, J=5.1 Hz, 1H), 7.78 (s, 1H), 7.44 - 7.40 (m, 1H), 7.36 (br. s., 1H), 7.27 (t, J=58 Hz, 1H), 6.87 (s, 1H), 6.49 - 6.39 (m, 1H), 5.78 (s, 1H), 4.80 (br. s., 2H), 3.18 - 3.08 (m, 1H), 3.08 - 2.98 (m, 1H), 2.06 - 1.93 (m, 1H), 1.51 (s, 9H), 1.19 (d, J=6.6 Hz, 3H).

5

1F. Preparation of *tert*-butyl *N*-[(9*R*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate

Pd/C (0.60 g, 0.570 mmol) was added to a 250 mL Parr hydrogenation flask containing a solution of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (2.46 g, 5.68 mmol) in EtOH (100 mL). The flask was purged with N<sub>2</sub> and pressurized to 55 psi of H<sub>2</sub> allowed to stir for 18 h. The reaction was filtered through CELITE® and concentrated to yield *tert*-butyl *N*-[(9*R*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (2.17 g, 88% yield) as a tan solid. MS(ESI) m/z: 436.3 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (400MHz, DMSO-d<sub>6</sub>) δ 9.32 (s, 1H), 8.71 (d, J=5.0 Hz, 1H), 7.96 (t, J=58 Hz, 1H), 7.43 (s, 1H), 7.32 (d, J=4.8 Hz, 1H), 7.22 (d, J=7.3 Hz, 1H), 4.66 (d, J=8.3 Hz, 1H), 2.62 (br. s., 1H), 1.88 (d, J=12.8 Hz, 1H), 1.77 - 1.59 (m, 2H), 1.42 - 1.28 (m, 9H), 1.15 (d, J=18.2 Hz, 2H), 0.83 (d, J=7.0 Hz, 3H).

20

1G. Preparation of (9*R*,13*S*)-13-amino-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

4 N HCl in dioxane (3.88 mL, 15.5 mmol) was added to a solution of *tert*-butyl *N*-[(9*R*,13*S*)-3-(difluoromethyl)-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (2.25 g, 5.2 mmol) in MeOH (10 mL). The reaction was allowed to stir at rt for 2 h. The reaction was cooled in an ice bath, and 7 N NH<sub>3</sub> in MeOH (13.3 mL, 93.0 mmol) was added. After 5 min, the reaction was diluted with CH<sub>2</sub>Cl<sub>2</sub> (80 mL) and the solid that formed was filtered. The filtrate was concentrated to yield (9*R*,13*S*)-13-amino-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (1.3 g, 3.88 mmol, 75% yield). MS(ESI) m/z: 336.3 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (400MHz, DMSO-d<sub>6</sub>) δ 9.33 (s, 1H), 8.71 (d, J=5.0 Hz, 1H), 7.94 (t, J=58 Hz, 1H), 7.85 (s, 1H), 7.40 (s, 1H), 7.32 (d, J=5.0

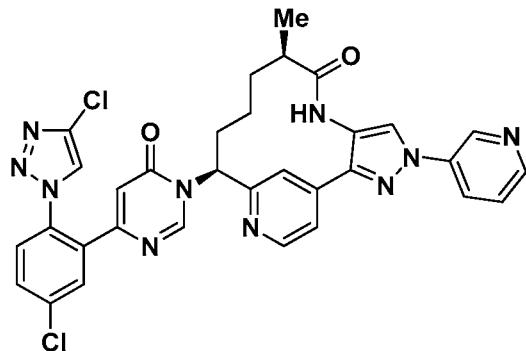

Hz, 1H), 4.01 (dd,  $J=10.2, 5.1$  Hz, 1H), 2.63 - 2.53 (m, 1H), 1.90 - 1.69 (m, 2H), 1.53 - 1.36 (m, 2H), 1.16 - 1.00 (m, 1H), 0.85 (d,  $J=7.0$  Hz, 3H).

1H. Preparation of (*9R,13S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one.

To a 100 mL flask containing a white suspension of 6-(5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl)pyrimidin-4-ol (0.83 g, 2.7 mmol), as prepared in Example 4 in ACN (36 mL) was added HATU (1.12 g, 3.0 mmol) and DBU (0.53 mL, 3.5 mmol).

- 10 The resulting clear, yellow solution was stirred at rt. After 5 min, (*9R,13S*)-13-amino-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (0.9 g, 2.68 mmol) was added and the resulting suspension was stirred at rt for 3 h. The reaction was then concentrated and purified by normal phase silica gel chromatography, eluting with a gradient of 0% to 100% EtOAc in hexanes to yield (*9R,13S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-3-(difluoromethyl)-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (0.87 g, 50% yield) as a white solid. MS(ESI) *m/z*: 626.2 [M+H]<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CD<sub>3</sub>OD) δ 8.91 - 8.83 (m, 1H), 8.78 - 8.71 (m, 1H), 8.33 (s, 1H), 7.88 (d,  $J=2.5$  Hz, 1H), 7.74 (s, 2H), 7.69 - 7.67 (m, 1H), 7.65 (s, 1H), 7.63 (t,  $J=58$  Hz, 1H), 7.52 - 7.50 (m, 1H), 6.36 (d,  $J=0.8$  Hz, 1H), 6.06 - 5.95 (m, 1H), 2.76 - 2.65 (m, 1H), 2.36 - 2.21 (m, 1H), 2.08 - 1.93 (m, 2H), 1.63 - 1.53 (m, 1H), 1.53 - 1.42 (m, 1H), 0.99 (d,  $J=6.9$  Hz, 3H). Analytical HPLC (Method A): RT = 8.87 min, purity = 99.7%.

Example 2. Preparation (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-4-(pyridin-3-yl)-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2,5,14,16-pentaen-8-one trifluoroacetate

5

2A. Preparation of 4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazole

To a solution of 4-nitro-1*H*-pyrazole (5.0 g, 44.2 mmol) in THF (100 mL) at 0 °C was added N-cyclohexyl-N-methylcyclohexanamine (0.948 mL, 4.43 mmol) followed by dropwise addition of SEM-Cl (12.55 mL, 70.7 mmol). The reaction mixture was then allowed to gradually rise to rt and stirred at rt overnight. The reaction mixture was then concentrated, followed by purification using normal phase chromatography to yield 4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazole as clear oil (2.4 g, 21% yield). <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.31 (s, 1H), 8.10 (s, 1H), 5.46 (s, 2H), 3.67 - 3.55 (m, 2H), 0.99 - 0.90 (m, 2H), 0.05 - 0.03 (m, 9H).

15

2B. Preparation of (*S*)-benzyl (1-(4-(4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a N<sub>2</sub> flushed pressure vial was added (*S*)-benzyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate, prepared as described in Example 5, (1.9 g, 6.00 mmol), 4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazole (1.6 g, 6.60 mmol), di(adamant-1-yl)(butyl)phosphine (0.323 g, 0.90 mmol), PvOH (0.209 mL, 1.80 mmol) and K<sub>2</sub>CO<sub>3</sub> (2.48 g, 17.9 mmol). To the above mixture was then added DMA (45 mL) and the vial was purged with N<sub>2</sub> for 5 min. To this mixture was then added Pd(OAc)<sub>2</sub> (0.135 g, 0.600 mmol). The reaction mixture was again briefly purged with N<sub>2</sub>. The vial was sealed and heated in microwave at 120 °C for 1 h. The reaction mixture was cooled to rt and partitioned between 10% aqueous LiCl (15 mL) and EtOAc (30 mL). The aqueous layer was extracted with EtOAc (2 x 20 mL) and the combined organic layers were washed

with brine (15 mL) and dried over MgSO<sub>4</sub>. The crude product was then purified using normal phase chromatography to yield (*S*)-benzyl (1-(4-(4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.92 g, 58% yield) as a brown oil. MS(ESI) *m/z*: 524.2 (M+H)<sup>+</sup>.

5

2C. Preparation of (*S*)-benzyl (1-(4-(4-amino-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

A solution of (*S*)-benzyl (1-(4-(4-nitro-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.92 g, 3.68 mmol), prepared as described in Example 2B, in MeOH (20 mL) and AcOH (2 mL) was heated in oil bath to 40 °C. To the above clear solution was then slowly added Zn (0.481 g, 7.35 mmol, in 3 portions (50:25:25%)) and allowed to stir at the same temperature for 5 min. Additional Zn was added to the reaction. The reaction mixture was monitored by LCMS and when complete, the reaction mixture was cooled and then 2.0 g of K<sub>2</sub>CO<sub>3</sub> (1 g for 1 mL AcOH) and 2.0 mL water was added. The reaction mixture was then stirred for 5 min. The reaction mixture was then filtered over a pad of CELITE® and concentrated *in vacuo* to yield the crude product. The crude product was then partitioned between EtOAc (30 mL) and saturated NaHCO<sub>3</sub> (15 mL) solution. The organic layers were separated, dried over MgSO<sub>4</sub>, filtered and concentrated. The crude product was then purified using normal phase chromatography to yield (*S*)-benzyl (1-(4-(4-amino-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.15 g, 63% yield) as pale yellow oil. MS(ESI) *m/z*: 494.4 (M+H)<sup>+</sup>.

2D. Preparation of benzyl ((*S*)-1-(4-((*R*)-2-methylbut-3-enamido)-1-((2-

25 (trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a N<sub>2</sub> flushed, 3-necked, 250 mL RBF was added a solution (*S*)-benzyl (1-(4-(4-amino-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.15 g, 2.33 mmol) and EtOAc (15 mL). The solution was cooled to -10 °C and (*R*)-2-methylbut-3-enoic acid (350 mg, 3.49 mmol), pyridine (0.564 mL, 6.99 mmol) and T3P® (2.77 mL, 4.66 mmol) were added. The cooling bath was removed and the solution was allowed to warm to rt and then stir over a period of 20 h. Water (20 mL) and EtOAc (20 mL) were added and the mixture was stirred for 30 min. The organic phase

was separated and the aqueous layer was extracted with EtOAc (20 mL). The combined organic extracts were washed with brine (15 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Purification by normal phase chromatography eluting with a gradient of hexanes/EtOAc gave benzyl ((S)-1-(4-(4-((R)-2-methylbut-3-enamido)-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.12 g, 79% yield). MS(ESI) *m/z*: 576.4 [M+H]<sup>+</sup>.

2E. Preparation of benzyl N-[(9*R*,10*E*,13*S*)-9-methyl-8-oxo-3-{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate

To a N<sub>2</sub> flushed, 250 mL, 3-necked, RBF was added a solution of benzyl ((S)-1-(4-(4-((R)-2-methylbut-3-enamido)-1-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.12 g, 1.945 mmol) in DCE (18 mL). The solution was sparged with Ar for 15 min. Grubbs II (662 mg, 0.778 mmol) was added in one portion. The reaction mixture was heated at 120 °C in microwave for 30 min. After cooling to rt, the solvent was removed and the residue was purified by normal phase chromatography eluting with a gradient of DCM/MeOH to yield benzyl N-[(9*R*,10*E*,13*S*)-9-methyl-8-oxo-3-{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (477 mg, 42% yield) as a tan solid. MS(ESI) *m/z*: 548.3 [M+H]<sup>+</sup>.

2F. Preparation of benzyl N-[(9*R*,13*S*)-9-methyl-8-oxo-3-{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate

Pd/C (0.93 g, 0.871 mmol) was added to a 250 mL Parr hydrogenation flask containing a solution of benzyl N-[(9*R*,10*E*,13*S*)-9-methyl-8-oxo-3-{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (477 mg, 0.871 mmol) in EtOH (20 mL). The flask was purged with N<sub>2</sub> and pressurized to 55 psi of H<sub>2</sub> and allowed to stir for 4 h. The reaction was filtered through a pad of CELITE® and concentrated to yield benzyl N-[(9*R*,13*S*)-9-methyl-8-oxo-3-{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]

octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (245 mg, 64% yield) as a tan solid. MS(ESI) *m/z*: 416.4 [M+H]<sup>+</sup>.

2G. Preparation of (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3-{{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

To a 100 mL flask containing a white suspension of 6-(5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl)pyrimidin-4-ol (0.580 g, 1.88 mmol), prepared as described in Example 4 in ACN (25.0 ml) was added HATU (0.785 g, 2.06 mmol) and DBU (0.370 ml, 2.44 mmol). The resulting clear, yellow solution was stirred at rt. After 5 min, benzyl N-[(9*R*,13*S*)-9-methyl-8-oxo-3-{{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (0.780 g, 1.88 mmol) was added and the resulting suspension was stirred at rt for 3 h. The reaction was concentrated and the crude material was purified by normal phase silica gel chromatography to give (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3-{{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (0.65 g, 0.92 mmol, 49.0% yield) isolated as a purple solid. MS(ESI) *m/z*: 706.7 [M+H]<sup>+</sup>.

2H. Preparation of (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

To a solution of (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3-{{[2-(trimethylsilyl)ethoxy]methyl}-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (12 mg, 0.017 mmol) in DCM (0.8 mL) was added TFA (0.2 mL, 2.60 mmol) and the reaction was stirred at rt for 30 min. The reaction mixture was then concentrated and the residue was purified by prep HPLC purification to give (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate (5.3 mg, 43% yield) as a pale pink solid. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.72 - 8.57 (m, 2H), 8.37 (s, 1H), 7.99 (s, 1H), 7.91 (d, *J*=2.2 Hz, 1H), 7.82 - 7.72 (m,

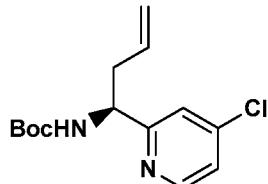

2H), 7.70 - 7.63 (m, 2H), 6.41 (s, 1H), 6.11 - 5.95 (m, 1H), 2.81 (td,  $J=6.8, 3.4$  Hz, 1H), 2.44 - 2.17 (m, 2H), 2.15 - 2.01 (m, 1H), 1.80 - 1.65 (m, 1H), 1.62 - 1.46 (m, 1H), 1.11 (d,  $J=7.0$  Hz, 3H), 1.01 (br. s., 1H). MS(ESI)  $m/z$ : 576.4 [M+H]<sup>+</sup>. Analytical HPLC (Method A): RT = 6.98 min, purity = >95.0%.

5

2I. Preparation (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-4-(pyridin-3-yl)-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2,5,14,16-pentaen-8-one; trifluoroacetate

(9*R*,13*S*)-13-{4-[5-Chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one mono trifluoroacetate (0.09 g, 0.16 mmol), (1*R*,2*R*)-N1,N2-dimethylcyclohexane-1,2-diamine (0.022 g, 0.16 mmol), 3-iodopyridine (0.032 g, 0.16 mmol), CuI (2 mg, 10.5  $\mu$ mol), Cs<sub>2</sub>CO<sub>3</sub> (0.10 g, 0.31 mmol), and DMF (2 mL) were added to a vial containing a Teflon septum. The mixture was evacuated and back-filled with Ar three times and then heated to 100 °C for 3 h. The reaction was cooled and diluted with 2 mL of a 9:1 ACN-H<sub>2</sub>O solution. After filtration through a syringe filter, the product was purified by prep HPLC to yield (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-9-methyl-4-(pyridin-3-yl)-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2,5,14,16-pentaen-8-one; trifluoroacetate (52 mg, 42%) as a tan solid. Analytical HPLC (Method A): RT = 6.69 min, purity = 97.5%.

Example 3. Preparation of *tert*-butyl *N*-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]carbamate

30

3A. Preparation of 4-chloro-2-[(E)-2-[(S)-2-methylpropane-2-sulfinyl]ethenyl]pyridine

To a solution of S-(-)-*t*-butyl-sulfinamide (0.856 g, 7.06 mmol) in DCM (14.13 mL) was added sequentially CuSO<sub>4</sub> (2.481 g, 15.54 mmol) and 4-chloropicolinaldehyde

5 [1.0 g, 7.06 mmol, prepared according to a modified described by Negi (*Synthesis*, 991 (1996))]. The white suspension was stirred at rt. After 3 h, the brown suspension was filtered through CELITE®, eluting with DCM, to give a clear brown filtrate.

Concentration gave crude product as a brown oil weighing 1.85 g. Purification by normal phase chromatography gave *tert*-butyl N-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]carbamate (1.31 g) as a clear, yellow oil. MS(ESI) *m/z*: 245.0 (M+H)<sup>+</sup>.

10 3B. Preparation of (*R*)-N-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]-2-methylpropane-2-sulfinamide

To a cooled (0-5 °C) mixture of InCl<sub>3</sub> (13.56 g, 61.3 mmol) in THF (170 mL) was 15 added dropwise, over 30 min, allylmagnesium bromide (1 M in Et<sub>2</sub>O) (62 mL, 61.3 mmol). The reaction was allowed to warm to rt. After 1 h at rt, a solution of 4-chloro-2-[(E)-2-[(S)-2-methylpropane-2-sulfinyl]ethenyl]pyridine (10 g, 40.9 mmol) in EtOH (170 mL) was added to the reaction mixture. After 2-3 h, the reaction was concentrated under vacuum at 50-55 °C. The crude material was partitioned between EtOAc (200ml) and 20 water (1 x 50 ml) and the layers were separated. The aqueous layer was extracted with EtOAc (2 x 50 ml). The organic layers were combined and washed with brine (1 x 100 ml), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to give (*R*)-N-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]-2-methylpropane-2-sulfinamide (13.5 g, 106%) as a yellow oil.

25 MS(ESI) *m/z*: 287.2 (M+H)<sup>+</sup>. This material was used in the next step without further purification.

3C. Preparation of (1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-amine

(*R*)-N-[(1*S*)-1-(4-Chloropyridin-2-yl)but-3-en-1-yl]-2-methylpropane-2-sulfinamide (75 g, 261 mmol) was dissolved in MeOH (1500 mL). 6N HCl (750 ml, 4.5 mol) was added. The reaction was stirred at rt for 2-3 h and then was concentrated. The residue was diluted with water (2 L), washed with EtOAc (500 ml). The aqueous layer was basified with saturated Na<sub>2</sub>CO<sub>3</sub> solution, then extracted into EtOAc (3 x 1 L). The

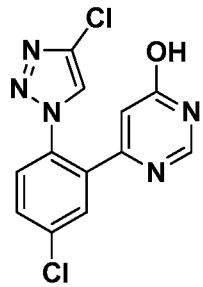

combined organic layers were washed with water (1 x 1 L) and brine (1 x 1 L), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and conc. under vacuum at 50-55 °C to give (1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-amine (43g, 90%) which was without further purification. MS(ESI) *m/z*: 183.2 (M+H)<sup>+</sup>.

5

3D. Preparation of *tert*-butyl *N*-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]carbamate

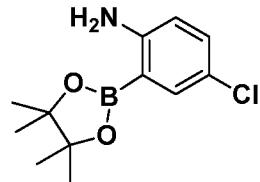

(1*S*)-1-(4-Chloropyridin-2-yl)but-3-en-1-amine (42g, 230 mmol) was dissolved in DCM (420 mL). Et<sub>3</sub>N (32.1 mL, 230 mmol) was added followed by dropwise addition of BOC<sub>2</sub>O (53.4 mL, 230 mmol). The reaction was stirred at rt for 2-3 h. The reaction was diluted with excess DCM (1 L), washed with water (1 x 500 ml) and brine (1 x 500 ml). The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated. The crude product was then purified using silica gel chromatography to give *tert*-butyl *N*-[(1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-yl]carbamate (61 g, 86%) as a pale yellow solid. MS(ESI) *m/z*: 283.2 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500 MHz, CDCl<sub>3</sub>) δ 8.44 (d, 1H), 7.26-7.16 (dd, 2H), 5.69-5.61 (m, 1H), 5.59 (bs, 1H), 5.07-5.03 (m, 2H), 4.76 (bs, 1H), 2.62-2.55 (m, 2H), 1.42 (s, 9H).

Example 4. Preparation of 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol

20

4A. Preparation of 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline

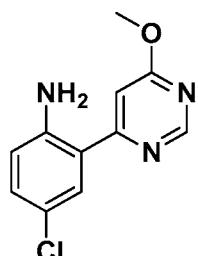

In a 20 mL microwave vial was added 2-bromo-4-chloroaniline (3 g, 14.53 mmol), 4,4,5,5-tetramethyl-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)-1,3,2-dioxaborolane

(5.53 g, 21.80 mmol), KOAc (3.66 g, 37.3 mmol), Pd(dppf)Cl<sub>2</sub>-CH<sub>2</sub>Cl<sub>2</sub> adduct (0.32 g, 0.44 mmol) and DMSO (9 mL). The resulting suspension was purged with N<sub>2</sub>, capped and heated at 80 °C for 22 h. The reaction was cooled to rt. Water was added to dissolve the salts, then the reaction was filtered. The remaining solid was suspended in DCM and the insoluble solid was filtered. The filtrate was concentrated and then purified by normal phase chromatography to give 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline (3.15 g, 86% yield) as a white solid. MS(ESI) *m/z*: 172.3 (M-C<sub>6</sub>H<sub>10</sub>+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 7.54 (d, *J*=2.6 Hz, 1H), 7.13 (dd, *J*=8.8, 2.6 Hz, 1H), 6.52 (d, *J*=8.6 Hz, 1H), 4.72 (br. s., 2H), 1.34 (s, 12H).

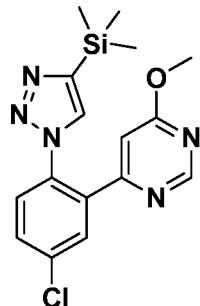

10

#### 4B. Preparation of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline

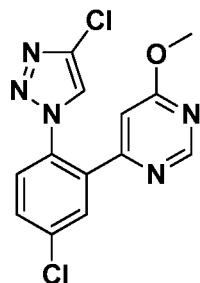

An RBF containing 4-chloro-6-methoxypyrimidine (3.13 g, 21.62 mmol), 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline (7.31 g, 21.62 mmol), Na<sub>2</sub>CO<sub>3</sub> (2.29 g, 21.62 mmol), DME (86 ml), EtOH (10.81 ml) and water (10.81 ml) was equipped with a condenser. The mixture was purged with argon for several min, then Pd(dppf)Cl<sub>2</sub>-CH<sub>2</sub>Cl<sub>2</sub> adduct (1.77 g, 2.16 mmol) was added. The reaction was heated at 90 °C for 5 h. The reaction was cooled to rt, diluted with water and extracted with EtOAc. The organic layer was washed with brine, concentrated and purified by normal phase chromatography to give 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (2.86 g, 56.1% yield) as yellow solid. MS(ESI) *m/z*: 236.0 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.78 (d, *J*=1.1 Hz, 1H), 7.49 (d, *J*=2.5 Hz, 1H), 7.15 (dd, *J*=8.8, 2.5 Hz, 1H), 6.99 (d, *J*=1.1 Hz, 1H), 6.67 (d, *J*=8.8 Hz, 1H), 5.89 (br. s., 2H), 4.03 (s, 3H).

4C. Preparation of 4-{5-chloro-2-[4-(trimethylsilyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine

To a solution of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (1.5 g, 6.36 mmol) in ACN (90 ml) at 0 °C was added 3-methylbutyl nitrite (1.28 ml, 9.55 mmol), followed by the dropwise addition of azidotrimethylsilane (1.26 ml, 9.55 mmol). Gas evolution was observed. After 10 min, the ice bath was removed, and the reaction was allowed to warm to rt. (Caution, aryl azides are potentially explosive.) After 1 h, ethynyltrimethylsilane (2.72 ml, 19.09 mmol) and Cu<sub>2</sub>O (0.09 g, 0.64 mmol) were added and the reaction was stirred for an additional 1 h. The reaction was partitioned in EtOAc and sat NH<sub>4</sub>Cl, and the layers were separated. The organic layer was washed with brine, dried over MgSO<sub>4</sub>, filtered and concentrated. Purification by normal phase chromatography gave 4-{5-chloro-2-[4-(trimethylsilyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (2.13 g, 5.92 mmol, 93% yield) as a yellow solid. MS(ESI) *m/z*: 360.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.71 (d, *J*=1.1 Hz, 1H), 7.82 (d, *J*=2.2 Hz, 1H), 7.61 - 7.56 (m, 1H), 7.54 - 7.48 (m, 2H), 6.20 (d, *J*=1.1 Hz, 1H), 3.92 (s, 3H), 0.32 - 0.28 (m, 9H).

4D. Preparation of 4-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine

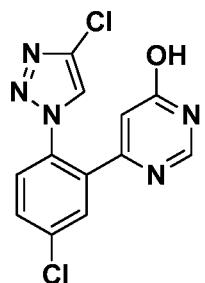

To a solution of 4-{5-chloro-2-[4-(trimethylsilyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (1.56 g, 4.33 mmol) in ACN (28.9 ml) was added NCS (2.03 g,

15.17 mmol) and silica gel (6.51 g, 108 mmol). The reaction was stirred at 80 °C for 1 h. Then, the reaction was filtered to remove the silica gel and the collected silica gel was washed with EtOAc. The filtrate was washed with water (2x), brine and concentrated. Purification by normal phase chromatography gave 4-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine (0.90 g, 64.5% yield) as a yellow foam.

5 MS(ESI) *m/z*: 322.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.70 (d, *J*=1.1 Hz, 1H), 7.75 (d, *J*=2.4 Hz, 1H), 7.66 - 7.55 (m, 2H), 7.50 (d, *J*=8.6 Hz, 1H), 6.52 (d, *J*=0.9 Hz, 1H), 3.98 (s, 3H).

10 4E. Preparation of 6-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol

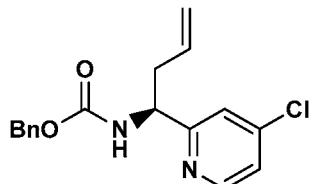

To a solution of 4-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine (900 mg, 2.79 mmol) in AcOH (6 ml) was added 48% HBr in water (3 ml, 26.5 mmol). The mixture was stirred at 85 °C for 1 h. The reaction was concentrated to dryness and then partitioned between EtOAc and sat aqueous NaHCO<sub>3</sub>.

15 The mixture was separated and the aqueous layer was extracted with EtOAc (2x). The organic layers were combined, concentrated, and then the residue was purified by normal phase chromatography to give a white solid. The solid was suspended in Et<sub>2</sub>O, filtered and washed with Et<sub>2</sub>O to give 6-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol (610 mg, 70.9% yield) as a white solid. MS(ESI) *m/z*: 308.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 7.96 (s, 1H), 7.74 - 7.67 (m, 2H), 7.62 (dd, *J*=8.5, 2.3 Hz, 1H), 7.47 (d, *J*=8.4 Hz, 1H), 6.44 (d, *J*=0.9 Hz, 1H).

20

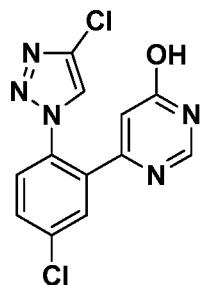

Example 5. Preparation of (*S*)-benzyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate

To a solution of (1*S*)-1-(4-chloropyridin-2-yl)but-3-en-1-amine (15.37 g, 60.1 mmol) in THF (150 mL) was added NaHCO<sub>3</sub> (15.16 g, 180 mmol) in H<sub>2</sub>O (150 mL) at 0 °C, followed by CBz-Cl (12.88 mL, 90 mmol). The reaction was then stirred at 0 °C for 2 h. The reaction mixture was diluted with EtOAc (150 mL). The organic phase was 5 separated, washed with brine (50 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated under reduced pressure. The crude material was purified using normal phase silica gel chromatography, eluting with a gradient of 0-20% EtOAc/petroleum ether) to obtain (*S*)-benzyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate (16 g, 84% yield) as a pale yellow liquid. MS(ESI) *m/z*: 317.5 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.44 (d, *J*=5.3 Hz, 1H), 7.41 - 7.12 (m, 7H), 5.77 (d, *J*=7.0 Hz, 1H), 5.72 - 5.57 (m, 1H), 5.16 - 5.00 (m, 4H), 4.86 (q, *J*=6.7 Hz, 1H), 2.60 (t, *J*=6.2 Hz, 2H).

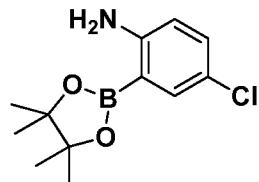

10

Example 6. Preparation of 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol

15

6A. Preparation of 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline

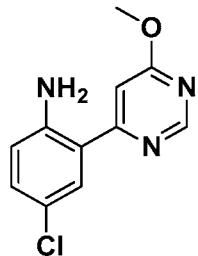

In a 20 mL microwave vial was added 2-bromo-4-chloroaniline (3 g, 14.53 mmol), 4,4,5,5-tetramethyl-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)-1,3,2-dioxaborolane (5.53 g, 21.80 mmol), KOAc (3.66 g, 37.3 mmol), Pd(dppf)Cl<sub>2</sub>-CH<sub>2</sub>Cl<sub>2</sub> adduct (0.32 g, 0.44 mmol) and DMSO (9 mL). The resulting suspension was purged with N<sub>2</sub>, capped and heated at 80 °C for 22 h. The reaction was cooled to rt. Water was added to dissolve the salts, then the reaction was filtered. The remaining solid was suspended in DCM and 20 the insoluble solid was filtered. The filtrate was concentrated and then purified by

normal phase chromatography to give 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline (3.15 g, 86% yield) as a white solid. MS(ESI) *m/z*: 172.3 ( $M-C_6H_{10}+H$ )<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 7.54 (d, *J*=2.6 Hz, 1H), 7.13 (dd, *J*=8.8, 2.6 Hz, 1H), 6.52 (d, *J*=8.6 Hz, 1H), 4.72 (br. s., 2H), 1.34 (s, 12H).

5

6B. Preparation of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline

An RBF containing 4-chloro-6-methoxypyrimidine (3.13 g, 21.62 mmol), 4-chloro-2-(tetramethyl-1,3,2-dioxaborolan-2-yl)aniline (7.31 g, 21.62 mmol), Na<sub>2</sub>CO<sub>3</sub> (2.29 g, 21.62 mmol), DME (86 ml), EtOH (10.81 ml) and water (10.81 ml) was equipped with a condenser. The mixture was purged with argon for several minutes then Pd(dppf)Cl<sub>2</sub>-CH<sub>2</sub>Cl<sub>2</sub> adduct (1.77 g, 2.16 mmol) was added. The reaction was heated at 90 °C for 5 h. The reaction was cooled to rt, diluted with water and extracted with EtOAc. The organic layer was washed with brine, concentrated and purified by normal phase chromatography to give 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (2.86 g, 56.1% yield) as yellow solid. MS(ESI) *m/z*: 236.0 ( $M+H$ )<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.78 (d, *J*=1.1 Hz, 1H), 7.49 (d, *J*=2.5 Hz, 1H), 7.15 (dd, *J*=8.8, 2.5 Hz, 1H), 6.99 (d, *J*=1.1 Hz, 1H), 6.67 (d, *J*=8.8 Hz, 1H), 5.89 (br. s., 2H), 4.03 (s, 3H).

20 6C. Preparation of 4-{5-chloro-2-[4-(trimethylsilyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine

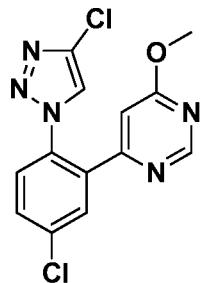

To a solution of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (1.5 g, 6.36 mmol) in ACN (90 ml) at 0 °C was added 3-methylbutyl nitrite (1.28 ml, 9.55 mmol), followed

by the dropwise addition of azidotrimethylsilane (1.26 ml, 9.55 mmol). Gas evolution was observed. After 10 min, the ice bath was removed, and the reaction was allowed to warm to rt. (Caution, aryl azides are potentially explosive.) After 1 h, ethynyltrimethylsilane (2.72 ml, 19.09 mmol) and Cu<sub>2</sub>O (0.09 g, 0.64 mmol) were added 5 and the reaction was stirred for an additional 1 h. The reaction was partitioned in EtOAc and saturated aqueous NH<sub>4</sub>Cl, and the layers were separated. The organic layer was washed with brine, dried over MgSO<sub>4</sub>, filtered and concentrated. Purification by normal phase chromatography gave 4-{5-chloro-2-[4-(trimethylsilyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (2.13 g, 5.92 mmol, 93% yield) as a yellow solid.

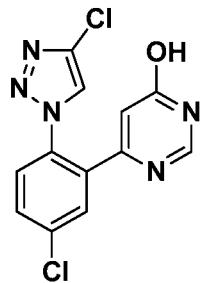

10 MS(ESI) *m/z*: 360.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.71 (d, *J*=1.1 Hz, 1H), 7.82 (d, *J*=2.2 Hz, 1H), 7.61 - 7.56 (m, 1H), 7.54 - 7.48 (m, 2H), 6.20 (d, *J*=1.1 Hz, 1H), 3.92 (s, 3H), 0.32 - 0.28 (m, 9H).

15 6D. Preparation of 4-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine

To a solution of 4-{5-chloro-2-[4-(trimethylsilyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (1.56 g, 4.33 mmol) in ACN (28.9 ml) was added NCS (2.03 g, 15.17 mmol) and silica gel (6.51 g, 108 mmol). The reaction was stirred at 80 °C for 1 h. 20 Then, the reaction was filtered to remove the silica gel and the collected silica gel was washed with EtOAc. The filtrate was washed with water (2x), brine and concentrated. Purification by normal phase chromatography gave 4-[5-chloro-2-(4-chloro-1H-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine (0.90 g, 64.5% yield) as a yellow foam.

MS(ESI) *m/z*: 322.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.70 (d, *J*=1.1 Hz, 1H), 7.75 (d, *J*=2.4 Hz, 1H), 7.66 - 7.55 (m, 2H), 7.50 (d, *J*=8.6 Hz, 1H), 6.52 (d, *J*=0.9 Hz, 1H), 3.98 (s, 3H).

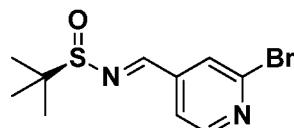

6E. Preparation of 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol

To a solution of 4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-methoxypyrimidine (900 mg, 2.79 mmol) in AcOH (6 ml) was added 48% HBr in water (3 ml, 26.5 mmol). The mixture was stirred at 85 °C for 1 h. The reaction was concentrated to dryness and then partitioned between EtOAc and saturated aqueous NaHCO<sub>3</sub>. The mixture was separated and the aqueous layer was extracted with EtOAc (2x). The organic layers were combined, concentrated, and then the residue was purified by normal phase chromatography to give a white solid. The solid was suspended in Et<sub>2</sub>O, filtered and washed with Et<sub>2</sub>O to give 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol (610 mg, 70.9% yield) as a white solid. MS(ESI) *m/z*: 308.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 7.96 (s, 1H), 7.74 - 7.67 (m, 2H), 7.62 (dd, *J*=8.5, 2.3 Hz, 1H), 7.47 (d, *J*=8.4 Hz, 1H), 6.44 (d, *J*=0.9 Hz, 1H).

15 Example 7. Preparation of *tert*-butyl *N*-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl] carbamate

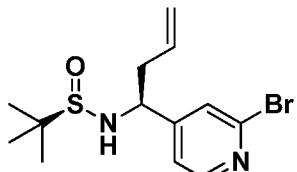

20 7A. Preparation of (*R*)-*N*-[(1*E*)-(2-bromopyridin-4-yl)methylidene]-2-methylpropane-2-sulfonamide

To a stirred suspension of (*R*)-2-methylpropane-2-sulfonamide (13.03 g, 108 mmol) and Cs<sub>2</sub>CO<sub>3</sub> (52.5 g, 161 mmol) in DCM (400 ml) was added 2-bromopyridine-4-carbaldehyde (20 g, 108 mmol) over 10 min. The reaction mixture was then stirred for

18.5 h at rt. The reaction mixture was concentrated and the residue was diluted with EtOAc (50 ml) and washed with brine (3 x 20 ml). The organic layer was dried over MgSO<sub>4</sub> and filtered and then the filtrate was concentrated. The residue was purified by normal phase chromatography using hexanes and EtOAc as eluents to afford (27.2 g, 5 87%) of (*R*)-N-[(1*E*)-(2-bromopyridin-4-yl)methylidene]-2-methylpropane-2-sulfonamide as a white solid. MS(ESI) *m/z*: 289-291.0 (M+H)<sup>+</sup>.

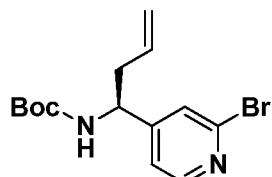

7B. Preparation of (*R*)-N-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]-2-methylpropane-2-sulfonamide

10

To a solution of (*R*)-N-[(1*E*)-(2-bromopyridin-4-yl)methylidene]-2-methylpropane-2-sulfonamide (0.73 g, 2.52 mmol) and indium (0.435 g, 3.79 mmol) in THF (6 ml) was slowly added 3-bromoprop-1-ene (0.458 g, 3.79 mmol) and resulting solution was heated at 60 °C for 18 h. The reaction mixture was cooled, filtered through CELITE® and the filtrate was concentrated. To the residue was added EtOAc (100 ml) and 5% NaHCO<sub>3</sub> (aq) (1000 ml) and an emulsion formed immediately. The suspension was filtered through paper. The organic layer was washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub> filtered, and concentrated. The resulting residue was purified by normal phase chromatography using hexanes and EtOAc as eluents to afford (0.62 g, 74%) of (*R*)-N-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]-2-methylpropane-2-sulfonamide as a yellow liquid. MS(ESI) *m/z*: 331-333.0 (M+H)<sup>+</sup>.

7C. Preparation of *tert*-butyl N-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]carbamate

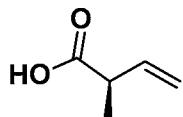

25

To a solution of (*R*)-N-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]-2-methylpropane-2-sulfonamide (1.38 g, 4.17 mmol) in MeOH (10 ml) was added 4 N HCl in dioxane (5.21 mL, 20.83 mmol). The reaction mixture was stirred for 1.5 h at rt, then

was concentrated. To the resulting residue was added ACN (10 ml), TEA (5.81 ml, 41.7 mmol) and Boc<sub>2</sub>O (1.818 g, 8.33 mmol). After 18 h, the reaction mixture was concentrated and the residue was taken up in EtOAc, washed with water, brine, dried over MgSO<sub>4</sub>, filtered and concentrated. The resulting residue was purified by normal phase chromatography using hexanes and EtOAc as eluents to afford (0.80 g, 58.7%) of *tert*-butyl *N*-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]carbamate as a pale yellow oil. MS(ESI) *m/z*: 324-326.1 (M+H)<sup>+</sup>.

Example 8. Preparation of (*R*)-2-methylbut-3-enoic acid

10

8A. Preparation of (*R*)-4-benzyl-3-((*R*)-2-methylbut-3-enoyl)oxazolidin-2-one

To the solution of 2-methylbut-3-enoic acid (5.59 g, 55.9 mmol) and NMM (6.14 mL, 55.9 mmol) in THF (62 mL) at 0 °C was added pivaloyl chloride (6.87 mL, 55.9 mmol) dropwise. The reaction mixture was cooled down to -78 °C, and stirred for ~2 h. In a separate flask: To the solution of (*R*)-4-benzyloxazolidin-2-one (8.25 g, 46.6 mmol) in THF (126 mL) at -78 °C was added N-butyllithium (2.5 M in hexane) (20.49 mL, 51.2 mmol) dropwise. After 35 min, this reaction was transferred via cannula to the first reaction. The reaction mixture was stirred at -78 °C for 2 h, then the cold bath was removed, and the reaction was quenched with saturated NH<sub>4</sub>Cl. The reaction was diluted with water and extracted with EtOAc (3x). The combined organic layers were washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated to give a yellow oil (15 g). Purification by silica gel chromatography afforded (*R*)-4-benzyl-3-((*R*)-2-methylbut-3-enoyl)oxazolidin-2-one (6.59 g, 55%) as a colorless oil. MS(ESI) *m/z*: 282.1 (M+Na)<sup>+</sup>.

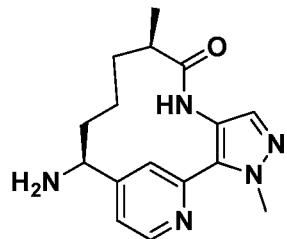

<sup>1</sup>H NMR (500 MHz, CDCl<sub>3</sub>) δ 7.36 - 7.19 (m, 5H), 6.03 - 5.93 (m, 1H), 5.23 - 5.10 (m, 2H), 4.69 - 4.63 (m, 1H), 4.51 - 4.43 (m, 1H), 4.23 - 4.15 (m, 2H), 3.29 (dd, *J* = 13.5, 3.3 Hz, 1H), 2.79 (dd, *J* = 13.5, 9.6 Hz, 1H), 1.35 (d, *J* = 6.9 Hz, 3H) ppm. The other diastereomer (*R*)-4-benzyl-3-((*S*)-2-methylbut-3-enoyl)oxazolidin-2-one (4.6 g, 38%) also obtained as a white solid. MS(ESI) *m/z*: 260.1 (M+H)<sup>+</sup>.

30

8B. Preparation of (*R*)-2-methylbut-3-enoic acid

- To a clear colorless solution of (*R*)-4-benzyl-3-((*R*)-2-methylbut-3-enoyl)oxazolidin-2-one (6.05 g, 23.33 mmol) in THF (146 mL) at 0 °C was added dropwise 30% aqueous H<sub>2</sub>O<sub>2</sub> (9.53 mL, 93 mmol) followed by 2 N LiOH (23.33 mL, 46.7 mmol).
- 5 After 30 min, the reaction was quenched with 25 mL of saturated Na<sub>2</sub>SO<sub>3</sub> and 25 mL of saturated NaHCO<sub>3</sub>. The reaction was then concentrated to remove the THF. The residue was diluted with water and extracted with CHCl<sub>3</sub> (3x). The aqueous layer was acidified with conc. HCl to pH~3 and then it was extracted with EtOAc (3x). The EtOAc layers were combined, washed with brine, dried over MgSO<sub>4</sub>, filtered and concentrated to afford
- 10 (*R*)-2-methylbut-3-enoic acid (2.15 g, 92%) as a colorless oil. <sup>1</sup>H NMR (500 MHz, CDCl<sub>3</sub>) δ 10.84 (br. s., 1H), 5.94 (ddd, *J* = 17.4, 10.1, 7.4 Hz, 1H), 5.22 - 5.13 (m, 2H), 3.23 - 3.15 (m, 1H), 1.31 (d, *J* = 7.2 Hz, 3H) ppm.

Example 9. Preparation of (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

9A. Preparation of *tert*-butyl *N*-[(1*S*)-1-[2-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate

- 20 To a large microwave vial was added *tert*-butyl *N*-[(1*S*)-1-(2-bromopyridin-4-yl)but-3-en-1-yl]carbamate (1.0 g, 3.06 mmol), prepared as described in Example 2, 1-methyl-4-nitro-1*H*-pyrazole (0.427 g, 3.36 mmol), dioxane (10 ml), di(adamantan-1-yl)(butyl)phosphine (0.164 g, 0.458 mmol), K<sub>2</sub>CO<sub>3</sub> (1.267 g, 9.17 mmol) and pivalic acid (0.106 ml, 0.917 mmol). The reaction was degassed with Ar. Afterwards, Pd(OAc)<sub>2</sub>
- 25 (0.069 g, 0.306 mmol) was added and the reaction was stirred at 100 °C. After 4 h, heating was stopped and the reaction was stirred at rt for 72 h. The reaction was quenched with water (20 ml) and extracted with EtOAc (3 x 50 ml). The combined organic layers were washed with brine (20 ml), dried (MgSO<sub>4</sub>), and filtered, and concentrated. The residue was purified by normal phase chromatography using heptanes and EtOAc as

eluents to give *tert*-butyl *N*[(1*S*)-1-[2-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate (0.62 g, 54%) as a white foam. MS(ESI) *m/z*: 374.08 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.73 (d, *J*=5.2 Hz, 1H), 8.28 - 8.15 (m, 1H), 7.66 - 7.54 (m, 1H), 7.43 - 7.34 (m, 1H), 5.76 - 5.63 (m, 1H), 5.26 - 5.16 (m, 2H), 4.99 (br. s., 5 1H), 4.83 (br. s., 1H), 3.97 - 3.85 (m, 3H), 2.66 - 2.46 (m, 2H), 1.45 (br. s., 9H).

9B. Preparation of *tert*-butyl *N*[(1*S*)-1-[2-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate

To a cooled (0 °C) acetone (40 ml)/ water (12 ml) solution of *tert*-butyl *N*[(1*S*)-1-[2-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate (0.62 g, 10 1.660 mmol) was added NH<sub>4</sub>Cl (0.444 g, 8.30 mmol) and Zn (1.086 g, 16.60 mmol). The ice bath was removed and the reaction was stirred 18 h. The reaction was filtered through paper and partitioned with water (20 ml) and EtOAc (75 ml). The aqueous layer was extracted with EtOAc (2 x 50 ml). The combined organic layers were washed with brine (25 ml) and dried (MgSO<sub>4</sub>). The mixture was filtered, concentrated and the residue was purified by normal phase chromatography using DCM and 0-10% MeOH as eluents to give *tert*-butyl *N*[(1*S*)-1-[2-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate (0.46 g, 60%). MS(ESI) *m/z*: 344.5 (M+H)<sup>+</sup>.

20 9C. Preparation of *tert*-butyl *N*[(1*S*)-1-(2-{1-methyl-4-[(2*R*)-2-methylbut-3-enamido]-1*H*-pyrazol-5-yl}pyridin-4-yl)but-3-en-1-yl]carbamate

To *tert*-butyl *N*[(1*S*)-1-[2-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-4-yl]but-3-en-1-yl]carbamate (0.6 g, 1.747 mmol) was added (R)-2-methylbut-3-enoic acid (0.189 g, 1.893 mmol), prepared as described in Example 8, in EtOAc (5.8 ml), cooled to 0 °C, 25 was added pyridine (0.0424 ml, 5.24 mmol) and a 50% EtOAc solution of T3P® (2.1 ml, 3.49 mmol). After 24 h, the reaction was partitioned between saturated aqueous NaHCO<sub>3</sub> (10 ml) and EtOAc (20 ml). The aqueous layer was extracted with EtOAc (2 x 20 ml). The combined organic layers were washed with brine (10 ml) and dried (MgSO<sub>4</sub>). The mixture was filtered and concentrated and the residue was purified by normal phase chromatography using hexanes and EtOAc as eluents to give *tert*-butyl *N*[(1*S*)-1-(2-{1-methyl-4-[(2*R*)-2-methylbut-3-enamido]-1*H*-pyrazol-5-yl}pyridin-4-yl)but-3-en-1-yl]carbamate (0.35 g, 47%). MS(ESI) *m/z*: 426.1 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ

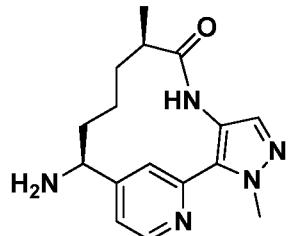

10.23 (br. s., 1H), 8.70 - 8.56 (m, 1H), 8.35 (d,  $J=1.1$  Hz, 1H), 7.56 - 7.44 (m, 1H), 7.25 - 7.14 (m, 1H), 6.03 (ddd,  $J=17.2, 10.2, 8.0$  Hz, 1H), 5.39 - 5.17 (m, 3H), 5.03 - 4.63 (m, 2H), 4.14 - 4.08 (m, 3H), 3.22 (quin,  $J=7.2$  Hz, 1H), 2.66 - 2.49 (m, 1H), 1.84 - 1.72 (m, 1H), 1.50 - 1.40 (m, 9H), 1.42 - 1.37 (m, 3H), 1.06 - 0.93 (m, 1H).

5

9D. Preparation of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate

To a degassed DCE (20 ml) solution of *tert*-butyl *N*-[(1*S*)-1-(2-{1-methyl-4-[(2*R*)-2-methylbut-3-enamido]-1*H*-pyrazol-5-yl}pyridin-4-yl)but-3-en-1-yl]carbamate (0.160 g, 0.376 mmol) was added Grubbs II (0.096 g, 0.113 mmol) and the reaction mixture was heated to 120 °C for 30 min in a microwave. The reaction mixture was concentrated and the residue was purified by normal phase chromatography using DCM and MeOH as eluents to afford desired product (29 mg, 19%) as a green film. MS(ESI) *m/z*: 398.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.71 (d,  $J=4.7$  Hz, 1H), 7.58 (s, 1H), 7.23 (d,  $J=13.8$  Hz, 1H), 7.03 - 6.94 (m, 1H), 6.61 (s, 1H), 5.82 - 5.71 (m, 1H), 5.19 - 5.09 (m, 2H), 4.75 (br. s., 1H), 4.15 - 4.09 (m, 3H), 3.19 - 3.10 (m, 1H), 2.67 (br. s., 1H), 2.28 - 2.15 (m, 2H), 1.54 - 1.39 (m, 9H), 1.34 - 1.28 (m, 3H).

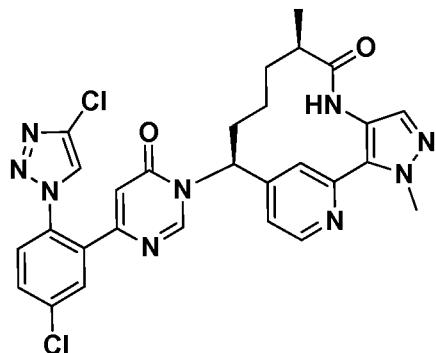

9E. Preparation of (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

To an EtOH (3 mL) solution of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (29 mg, 0.073 mmol) was added PtO<sub>2</sub> (4 mg). The reaction mixture was purged with hydrogen, then was hydrogenated at 55 psi. After 3 h, the reaction mixture was filtered through a 0.45 μM filter and concentrated to afford a dark solid (MS(ESI) *m/z*: 400.3 (M+H)<sup>+</sup>). The dark solid residue was dissolved in 4N HCl in dioxane (1 ml) and MeOH (1 ml). After 3 h, the mixture was concentrated and resultant HCl salt was dissolved in DCM/MeOH and passed through a basic cartridge to afford (9*R*,13*S*)-13-

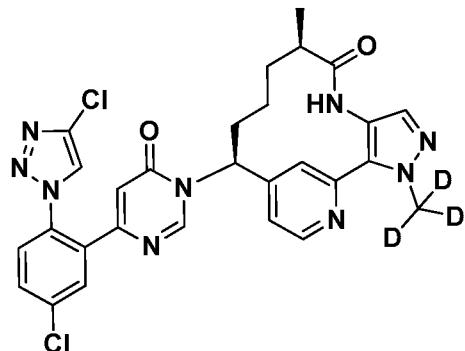

amino-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one as a dark solid (21 mg, 96%), which was used in next step without further purification. MS(ESI) *m/z*: 300.2 (M+H)<sup>+</sup>.

- 5 Example 10. Preparation of (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihdropyrimidin-1-yl}-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

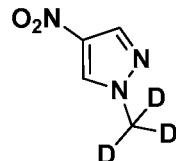

- To a solution of 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol (0.019 g, 0.060 mmol), prepared as described in Example 6, in CH<sub>3</sub>CN (0.4 ml) was added HATU (0.030 g, 0.078 mmol) and DBU (0.014 mL, 0.090 mmol). After 30 min, (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one, prepared as described in Example 9, was added with DMF (0.2 ml). After 18 h, the reaction was diluted with DMF, filtered and concentrated.
- 10 The residue was purified by reverse phase HPLC using PHENOMENEX® Luna 5U 30x100mm (10:90 ACN/H<sub>2</sub>O to 90:10 ACN/H<sub>2</sub>O, 0.1% TFA) (20% B start, 14 min gradient). The desired fractions were concentrated and freeze-dried to afford (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihdropyrimidin-1-yl}-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (11.9 mg, 27%) as an off-white solid. MS(ESI) *m/z*: 590.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.78 - 8.70 (m, 1H), 8.41 - 8.33 (m, 2H), 7.92 - 7.85 (m, 2H), 7.80 - 7.73 (m, 1H), 7.71 - 7.65 (m, 1H), 7.51 (s, 1H), 7.21 (dd, *J*=5.3, 1.8 Hz, 1H), 6.50 - 6.42 (m, 1H), 5.77 (dd, *J*=12.5, 3.1 Hz, 1H), 4.23 - 4.16 (m, 3H), 2.69 - 2.58 (m, 1H), 2.41 (dd, *J*=7.5, 4.2 Hz, 1H), 2.22 - 2.09 (m, 1H), 2.07 - 1.96 (m, 1H), 1.74 - 1.60 (m, 1H), 1.38 (d, *J*=7.7 Hz, 2H), 1.15 (d, *J*=7.0 Hz, 3H). Analytical HPLC (Method A) RT = 7.38 min, purity = 96%.

Example 11. Preparation of (9*R*,13*S*)-13-{4-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]-6-oxo-1,6-dihydropyrimidin-1-yl}-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

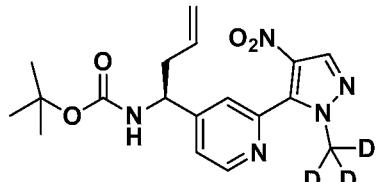

5

11A. Preparation of 1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1*H*-pyrazole

4-Nitro-1*H*-pyrazole (10.3g, 91mmol) was dissolved in THF (200 ml) and cooled to 0 °C. To this solution was added portionwise NaH (60%, 4.37g, 109 mmol) and stirred for an additional 0.5 h cold. To this cold milky solution was then added CD<sub>3</sub>I (6.23 ml, 100 mmol) dropwise and the reaction mixture stirred cold for 3 h, then warmed to rt and stirred at this temperature overnight. The reaction mixture was quenched with cold water (200 ml), extracted with EtOAc (2 x 200 ml) and dried with MgSO<sub>4</sub>. The solution was filtered and concentrated yielding a yellow solid. Recrystallization of the material from hexane/ethyl acetate afforded the desired compound as a yellow solid (11.5g, 97%). <sup>1</sup>H NMR (CDCl<sub>3</sub>)δ 8.85 (s, 1H), 8.82 (s, 1H).

11B. Preparation of *tert*-butyl N-[(1*S*)-1-{2-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1*H*-pyrazol-5-yl]pyridin-4-yl}but-3-en-1-yl]carbamate

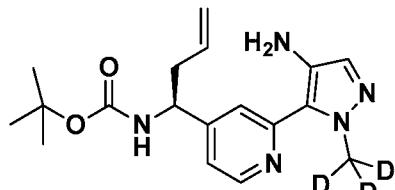

20

*tert*-Butyl N-[(1*S*)-1-{2-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1*H*-pyrazol-5-yl]pyridin-4-yl}but-3-en-1-yl]carbamate (0.80 g, 70%), a white foam, was prepared in the same manner as

5 *tert*-butyl N-[(1*S*)-1-{2-(1-methyl-4-nitro-1*H*-pyrazol-5-yl) pyridin-4-yl]but-3-en-1-yl]carbamate, as described in Example 9A, by replacing 1-methyl-4-nitro-1*H*-pyrazole with 1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1*H*-pyrazole. MS(ESI) *m/z*: 377.5 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500MHz, CDCl<sub>3</sub>) δ 8.73 (d, *J*=5.2 Hz, 1H), 8.28 - 8.15 (m, 1H), 7.59 (s, 1H), 7.43 - 7.34 (m, 1H), 5.73 - 5.63 (m, 1H), 5.24 - 5.18 (m, 2H), 4.99 (br. s., 1H), 4.83 (br. s., 1H), 2.69 - 2.42 (m, 2H), 1.45 (br. s., 9H).

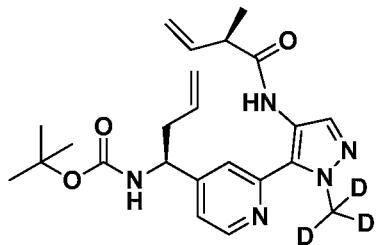

10C. Preparation of *tert*-butyl N-[(1*S*)-1-{2-[4-amino-1-(<sup>2</sup>H<sub>3</sub>)methyl-1*H*-pyrazol-5-yl]pyridin-4-yl}but-3-en-1-yl]carbamate

Example 12. Preparation of 6-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}pyrimidin-4-ol

15

12A. Preparation of 4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine

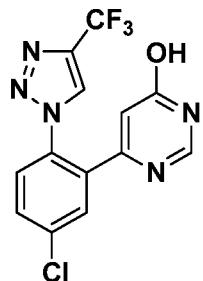

To a solution of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (1.0 g, 4.24 mmol),  
20 prepared as described in Example 6B, in ACN (60.6 ml) at 0 °C was added 3-methylbutyl nitrite (0.86 ml, 6.36 mmol) followed by the dropwise addition of azidotrimethylsilane (0.84 ml, 6.36 mmol). Gas evolution was observed. After 10 min, the ice bath was removed, and the reaction was allowed to warm to rt. (Caution, aryl azides are

potentially explosive.) After 2 h, Cu<sub>2</sub>O (61 mg, 0.42 mmol) was added followed by a slow bubbling of 3,3,3-trifluoroprop-1-yne gas over a period of 5 min. After an additional 10 min, the reaction was partitioned between DCM and saturated aqueous NH<sub>4</sub>Cl and then the layers were separated. The organic layer was washed with brine, 5 dried over MgSO<sub>4</sub>, filtered and concentrated. Purification by normal phase chromatography gave 4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (1.46 g, 97% yield) as a yellow solid. MS(ESI) *m/z*: 356.1 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.62 (d, *J*=1.1 Hz, 1H), 8.00 (d, *J*=0.7 Hz, 1H), 7.75 (d, *J*=2.4 Hz, 1H), 7.66 - 7.60 (m, 1H), 7.52 (d, *J*=8.6 Hz, 1H), 6.60 (d, *J*=1.1 Hz, 1H), 3.98 (s, 3H). <sup>19</sup>F NMR (376MHz, CDCl<sub>3</sub>) δ -61.10 (s).

10

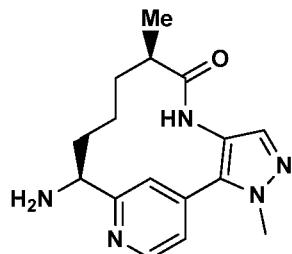

12B. Preparation of 6-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}pyrimidin-4-ol

15 To a solution of 4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-methoxypyrimidine (1.46 g, 4.10 mmol) in AcOH (10ml) was added 48% HBr in water (5 ml, 44.2 mmol). The mixture was stirred at 85 °C for 1 h. The reaction was concentrated to dryness and then partitioned between EtOAc and saturated aqueous NaHCO<sub>3</sub> solution. The layers were separated and the aqueous layer was extracted with 20 EtOAc (2x). The organic layers were combined and washed with saturated aqueous NaHCO<sub>3</sub>, brine, dried over MgSO<sub>4</sub>, filtered and the solvent was reduced under vacuum until some solid started to form. The resulting suspension was triturated with Et<sub>2</sub>O. The solid was filtered and washed with Et<sub>2</sub>O to give 6-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}pyrimidin-4-ol (1 g, 71.3% yield) as a pale yellow solid.

25 MS(ESI) *m/z*: 342.0 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.83 (d, *J*=0.7 Hz, 1H), 7.99 (d, *J*=0.9 Hz, 1H), 7.87 (d, *J*=2.2 Hz, 1H), 7.79 - 7.72 (m, 1H), 7.70 - 7.62 (m, 1H), 6.45 (d, *J*=0.9 Hz, 1H). <sup>19</sup>F NMR (376MHz, CD<sub>3</sub>OD) δ -62.61 (s).

Example 13. Preparation of (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

5 13A. Preparation of 1-methyl-4-nitro-1*H*-pyrazole

To a solution of 4-nitro-1*H*-pyrazole (2.5 g, 22.11 mmol) in THF (50 mL) was added NaH (0.973 g, 24.32 mmol) and the mixture was stirred at rt for 5 min. To this suspension was then added CH<sub>3</sub>I (1.382 mL, 22.11 mmol) and stirred at rt overnight. The reaction mixture was then diluted with EtOAc (2 x 25 mL) and washed with brine (25 mL). The organic layer was concentrated, followed by purification using normal phase chromatography to yield 1-methyl-4-nitro-1*H*-pyrazole as white solid (1.9 g, 80% yield).

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ ppm 8.12 (s, 1H), 8.06 (s, 1H), 3.97 (s, 3H).

13B. Preparation of (*S*)-*tert*-butyl (1-(4-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-

15 yl)but-3-en-1-yl)carbamate

To a N<sub>2</sub> flushed pressure vial was added (*S*)-*tert*-butyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate (3.0 g, 10.61 mmol), 1-methyl-4-nitro-1*H*-pyrazole (1.348 g, 10.61 mmol), di(adamant-1-yl)(butyl)phosphine (1.141 g, 3.18 mmol), PvOH (0.369 ml, 3.18 mmol) and K<sub>2</sub>CO<sub>3</sub> (4.40 g, 31.8 mmol). To the above mixture was then added DMF (21 mL) and the vial was purged with N<sub>2</sub> for 5 min. To this mixture was then added Pd(OAc)<sub>2</sub> (0.476 g, 2.122 mmol). The reaction mixture was again briefly purged with N<sub>2</sub>. The vial was sealed and heated in oil bath at 120 °C for 4 h. The reaction mixture was cooled to rt and partitioned between 10% aqueous LiCl (15 mL) and EtOAc (30 mL). The aqueous layer was extracted with EtOAc (2 x 20 mL) and the combined organic layers were washed with brine (15 mL), dried over MgSO<sub>4</sub>, filtered and concentrated. The crude product was then purified using normal phase chromatography to yield (*S*)-*tert*-butyl (1-(4-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.2 g, 29% yield) as a brown oil. MS(ESI) *m/z*: 374.4 (M+H)<sup>+</sup>.

13C. Preparation of (*S*)-*tert*-butyl (1-(4-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

A solution of (*S*)-*tert*-butyl (1-(4-(1-methyl-4-nitro-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (1.2 g, 3.21 mmol) in MeOH (10 mL) and AcOH (1 mL) was heated in oil bath to 40 °C. To the above clear solution was then slowly added Zn (0.420 g, 6.43 mmol, in 3 portions (50:25:25%)) and allowed to stir at the same temperature for 5 min. The reaction mixture was monitored by LCMS and once reaction is complete, to the cooled reaction mixture was then added 1 g of K<sub>2</sub>CO<sub>3</sub> (1 g for 1 mL AcOH) and 1 mL water. The reaction mixture was then stirred for 5 min. The reaction mixture was then filtered over a pad of CELITE® and concentrated *in vacuo* to yield the crude product. The crude product was then partitioned between EtOAc (30 mL) and saturated aqueous NaHCO<sub>3</sub> (15 mL) solution. The organic layers were separated, dried over MgSO<sub>4</sub>, filtered and concentrated. The crude product was then purified using normal phase chromatography to yield (*S*)-*tert*-butyl (1-(4-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (0.88 g, 76% yield) as pale brown oil. MS(ESI) *m/z*: 344.4 (M+H)<sup>+</sup>.

13D. Preparation of *tert*-butyl ((*S*)-1-(4-(1-methyl-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate

To a N<sub>2</sub> flushed, 3-necked, 250 mL RBF was added a solution of (*S*)-*tert*-butyl (1-(4-(4-amino-1-methyl-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (620 mg, 1.805 mmol) and EtOAc (15 mL). The solution was cooled to -10 °C and (*R*)-2-methylbut-3-enoic acid, as prepared in Example 2, (271 mg, 2.71 mmol), pyridine (0.437 mL, 5.42 mmol) and T3P® (2.149 mL, 3.61 mmol) were added. The cooling bath was removed and the solution was allowed to warm to rt and then stir over a period of 20 h. Water (15 mL) and EtOAc (15 mL) were added and the mixture was stirred for 30 min. The organic phase was separated and the aqueous layer was extracted with EtOAc (15 mL). The combined organic extracts were washed with brine (15 mL), dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Purification by normal phase chromatography eluting with a gradient of hexanes/EtOAc gave *tert*-butyl ((*S*)-1-(4-(1-

methyl-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (0.26 g, 34% yield). MS(ESI) *m/z*: 426.5 [M+H]<sup>+</sup>.

13E. Preparation of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-

5 tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate

To a N<sub>2</sub> flushed, 250 mL, 3-necked RBF was added a solution of *tert*-butyl ((*S*)-1-(4-(1-methyl-4-((*R*)-2-methylbut-3-enamido)-1*H*-pyrazol-5-yl)pyridin-2-yl)but-3-en-1-yl)carbamate (266 mg, 0.625 mmol) in DCE (18 mL). The solution was sparged with argon for 15 min. Grubbs II (213 mg, 0.250 mmol) was added in one portion. The reaction mixture was heated to 120 °C in microwave for 30 min. After cooling to rt, the solvent was removed and the residue was purified by normal phase chromatography eluting with a gradient of DCM/MeOH to yield *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (60 mg, 23% yield) as a tan solid. MS(ESI) *m/z*: 398.4 [M+H]<sup>+</sup>.

15

13F. Preparation of *tert*-butyl *N*-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate

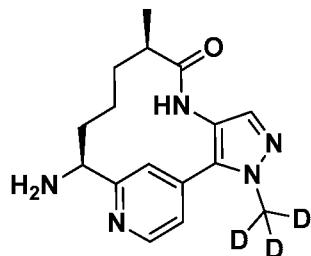

Pd/C (0.016 g, 0.015 mmol) was added to a 100 mL Parr hydrogenation flask containing a solution of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (60 mg, 0.151 mmol) in EtOH (6 mL). The flask was purged with N<sub>2</sub> and pressurized to 55 psi of H<sub>2</sub> and allowed to stir for 5 h. The reaction was filtered through a pad of CELITE® and concentrated to yield *tert*-butyl *N*-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (48 mg, 76% yield) as a tan solid. MS(ESI) *m/z*: 400.5 [M+H]<sup>+</sup>.

13G. Preparation of (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

To a solution of *tert*-butyl *N*-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (48 mg, 0.120 mmol) in DCM (2.5 mL) was added TFA (0.6 mL, 7.79 mmol) and the reaction was stirred at rt for 1.5 h. The reaction mixture was then concentrated to give (9*R*,13*S*)-

13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one bis trifluoroacetate (63 mg, 94% yield) as a brown solid which was then dissolved in MeOH (1 mL) to give a clear, brown solution. The solution was added to a pre-rinsed AGILENT® StratoSpheres SPE PL-HCO<sub>3</sub> MP Resin cartridge. Gravity 5 filtration, eluting with MeOH, gave a clear, slightly yellow filtrate. Concentration provided (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (25 mg, 93%) as a pale yellow solid. MS(ESI) *m/z*: 300.4 [M+H]<sup>+</sup>.

10 Example 14. Preparation of (9*R*,13*S*)-13-amino-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

14A. Preparation of 1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1H-pyrazole

15 DIAD (5.59 mL, 28.7 mmol) was added to a solution of 4-nitro-1H-pyrazole (2.5 g, 22.11 mmol), CD<sub>3</sub>OD (0.898 mL, 22.11 mmol), and Ph<sub>3</sub>P (resin bound) (8.84 g, 26.5 mmol) in THF (40 ml) and stirred overnight. The reaction was quenched with water, extracted with EtOAc, washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated. The crude product was purified by normal phase chromatography eluting with a gradient 20 of DCM/MeOH to afford the desired product (1.92 g, 14.76 mmol, 66.7% yield) as a white solid. MS(ESI) *m/z*: 131.0 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.13 (d, J=0.4 Hz, 1H), 8.05 (s, 1H).

14B. Preparation of *tert*-butyl *N*[(1*S*)-1-{4-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1H-pyrazol-5-yl]pyridin-2-yl}but-3-en-1-yl]carbamate

To a large microwave vial were added (*S*)-*tert*-butyl (1-(4-chloropyridin-2-yl)but-3-en-1-yl)carbamate (2.61 g, 9.22 mmol), 1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1H-pyrazole (1.0 g, 7.69 mmol), di(adamantanyl)(butyl)phosphine (0.413 g, 1.15 mmol), K<sub>2</sub>CO<sub>3</sub> (3.19 g, 23.06

mmol) and pivalic acid (0.268 ml, 2.306 mmol) and DMF (15.37 ml). The reaction was purged with argon for 10 min, Pd(OAc)<sub>2</sub> (0.173 g, 0.769 mmol) was added, vial sealed, and stirred at 115 °C overnight. The reaction was then partitioned between EtOAc and H<sub>2</sub>O. The aqueous layer was extracted with additional EtOAc (2x). The combined organic 5 layer was washed with brine, dried over MgSO<sub>4</sub>, filtered and concentrated. The residue was purified by normal phase chromatography eluting with a gradient of hexanes/EtOAc to give the desired product (1.49 g, 3.96 mmol, 51.5% yield) as a lavender foam.

MS(ESI) *m/z*: 377.0 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.77 (d, J=4.8 Hz, 1H), 8.21 (s, 1H), 7.26 (s, 1H), 7.23 (dd, J=5.1, 1.5 Hz, 1H), 5.78 - 5.65 (m, 1H), 5.55 (d, J=6.8 Hz, 10 1H), 5.14 - 5.03 (m, 2H), 4.89 (d, J=6.8 Hz, 1H), 2.66 (t, J=6.6 Hz, 2H), 1.44 (s, 9H).

14C. Preparation of *tert*-butyl *N*-[*(1S)*-1-{4-[4-amino-1-(<sup>2</sup>H<sub>3</sub>)methyl-1*H*-pyrazol-5-yl]pyridin-2-yl}but-3-en-1-yl]carbamate

*tert*-Butyl *N*-[*(1S)*-1-{4-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-nitro-1*H*-pyrazol-5-yl]pyridin-2-yl}but-15 3-en-1-yl]carbamate (1.45 g, 3.85 mmol) was dissolved in acetone (15ml)/ water (3 ml), cooled to 0 °C, and added NH<sub>4</sub>Cl (1.030 g, 19.26 mmol) and zinc (2.52 g, 38.5 mmol) followed by removal of ice bath. After 1h, the reaction was filtered and filtrate partitioned with water (30 ml) and EtOAc(50 ml). The aqueous layer was extracted with EtOAc (2 x 50 ml). The combined organic layers were washed with brine (20 ml), dried 20 (MgSO<sub>4</sub>), filtered, and concentrated. The residue was purified by normal phase eluting with a gradient of DCM/MeOH chromatography to afford the desired product (0.62 g, 46.5%). MS(ESI) *m/z*: 347.2 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.67 (dd, J=5.1, 0.7 Hz, 1H), 7.26 - 7.23 (m, 2H), 7.21 (dd, J=5.1, 1.5 Hz, 1H), 5.79 - 5.66 (m, 1H), 5.58 (d, J=7.3 Hz, 1H), 5.11 - 5.05 (m, 2H), 4.86 (q, J=6.6 Hz, 1H), 2.64 (t, J=6.7 Hz, 2H), 25 1.44 (s, 9H).

14D. Preparation of *tert*-butyl *N*-[*(1S)*-1-{4-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-[*(2R*)-2-methylbut-3-enamido]-1*H*-pyrazol-5-yl]pyridin-2-yl}but-3-en-1-yl]carbamate

(*R*)-2-Methylbut-3-enoic acid (233 mg, 2.327 mmol), *tert*-butyl *N*-[*(1S)*-1-{4-[4-amino-1-(<sup>2</sup>H<sub>3</sub>)methyl-1*H*-pyrazol-5-yl]pyridin-2-yl}but-3-en-1-yl]carbamate (620 mg, 30 1.79 mmol), pyridine (0.433 ml, 5.37 mmol) in EtOAc (17.900 ml) was cooled to -10 °C under Ar followed by dropwise addition of T3P® (50%wt in EtOAc) (2.131 ml, 3.58

mmol) was added dropwise and then gradually warmed up to rt. After 3.5 h, the reaction mixture was diluted with EtOAc, washed with 1.5 M K<sub>2</sub>HPO<sub>4</sub> followed by brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated. The crude product was then purified by normal phase chromatography eluting with a gradient of hexanes/EtOAc to the desired product 5 (529 mg, 1.234 mmol, 69.0% yield) as a yellow foam. MS(ESI) *m/z*: 429.2 (M+H)<sup>+</sup>.

14E. Preparation of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate

Five large microwave vials were charged in equal amounts with the following:  
10 *tert*-butyl *N*-[(1*S*)-1-{4-[1-(<sup>2</sup>H<sub>3</sub>)methyl-4-[(2*R*)-2-methylbut-3-enamido]-1*H*-pyrazol-5-yl]pyridin-2-yl}but-3-en-1-yl]carbamate (0.51 g, 1.190 mmol) in degassed DCE (90 ml) was irradiated 120 °C for 30 min in the presence of Grubbs II (0.404 g, 0.476 mmol). The reactions were combined, concentrated, and the residue purified by normal phase column chromatography eluting with a gradient of hexanes/EtOAc to give the desired 15 product (0.124 g, 26.0%) as a brown solid. MS(ESI) *m/z*: 401.2 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.66 (d, J=5.1 Hz, 1H), 7.52 (s, 1H), 7.19 (d, J=4.8 Hz, 1H), 6.80 (s, 1H), 6.37 (d, J=7.5 Hz, 1H), 5.68 (t, J=11.2 Hz, 1H), 4.82 - 4.63 (m, 2H), 3.12 - 2.93 (m, 2H), 1.93 (q, J=11.1 Hz, 1H), 1.48 (s, 9H), 1.15 (d, J=5.9 Hz, 3H).

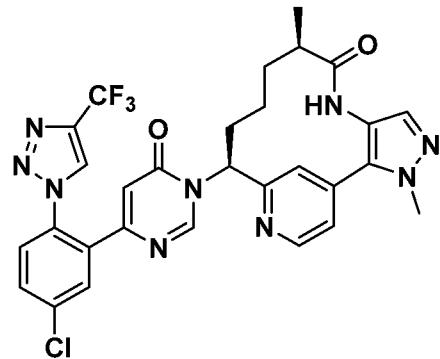

20 14F. Preparation of *tert*-butyl *N*-[(9*R*,13*S*)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate

PtO<sub>2</sub> (6.80 mg, 0.030 mmol) was added to a stirring solution of *tert*-butyl *N*-[(9*R*,10*E*,13*S*)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,10,14,16-hexaen-13-yl]carbamate (0.120 g, 0.300 mmol) in EtOH (10 ml). The suspension was subjected to a hydrogen atmosphere (55 psi) for 1 h. The catalyst was filtered off through a plug of CELITE® and the filtrate concentrated. The product (0.104 g, 86%) was carried forward to the next reaction as is without further purification. MS(ESI) *m/z*: 403.2 (M+H)<sup>+</sup>.

14G. Preparation of (*9R,13S*)-13-amino-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one

A solution of 4.0 M HCl in dioxane (1.621 ml) was added to a stirring solution of *tert*-butyl *N*-(*9R,13S*)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]carbamate (0.100 g, 0.248 mmol) in MeOH (3 ml) and stirred overnight. The reaction mixture was concentrated to dryness and placed under high vacuum. The hydrogen chloride salt was free based by dissolution in MeOH, passed through a resin bound NaHCO<sub>3</sub> cartridge (StratoSpheres SPE; 500 mg, 0.90 mmol loading) and filtrate concentrated. The material was carried forward as is to next reaction. MS(ESI) *m/z*: 303.4 (M+H)<sup>+</sup>.

Example 15. Preparation of (*9R,13S*)-13-(4-{5-chloro-2-[4-(trifluoromethyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

15

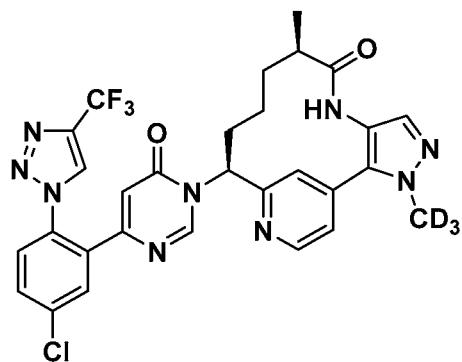

To a scintillation vial containing 6-{5-chloro-2-[4-(trifluoromethyl)-1H-1,2,3-triazol-1-yl]phenyl}pyrimidin-4-ol (22.8 mg, 0.067 mmol), prepared as described in Example 12, HATU (33.0 mg, 0.087 mmol) in anhydrous ACN (0.5 mL) was added DBU (15 mL, 0.100 mmol). After 30 min, a solution of (*9R,13S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (20 mg, 0.067 mmol), prepared as described in Example 13, in 0.5ml CH<sub>3</sub>CN and DMF (0.1 ml) was added. The resulting solution was stirred at rt for 2 h then purified by reverse phase chromatography to give, after concentration and lyophilization, (*9R,13S*)-13-(4-{5-chloro-2-[4-(trifluoromethyl)-1H-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate (26.98 mg, 53.1% yield) as a white solid. MS(ESI) *m/z*: 624.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.81 (d, *J*=0.7 Hz, 1H), 8.75 (s, 1H), 8.70

(d,  $J=5.3$  Hz, 1H), 7.89 (d,  $J=2.4$  Hz, 1H), 7.77 - 7.72 (m, 1H), 7.72 - 7.66 (m, 2H), 7.53 (dd,  $J=5.1$ , 1.5 Hz, 1H), 7.49 (s, 1H), 6.43 (s, 1H), 6.02 - 5.93 (m, 1H), 4.04 (s, 3H), 2.70 (td,  $J=6.7$ , 3.3 Hz, 1H), 2.27 (tt,  $J=12.7$ , 4.4 Hz, 1H), 2.12 - 1.94 (m, 2H), 1.66 - 1.52 (m, 1H), 1.45 (ddd,  $J=15.0$ , 9.8, 5.0 Hz, 1H), 1.00 (d,  $J=7.0$  Hz, 3H), 0.69 (br. s., 1H).  $^{19}\text{F}$

5 NMR (376MHz, CD<sub>3</sub>OD) δ -62.54 (s), -77.44 (s). Analytical HPLC (Method A): RT = 11.02 min, purity = 96.7%.

Example 16. Preparation of (9*R*,13*S*)-13-(4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

10

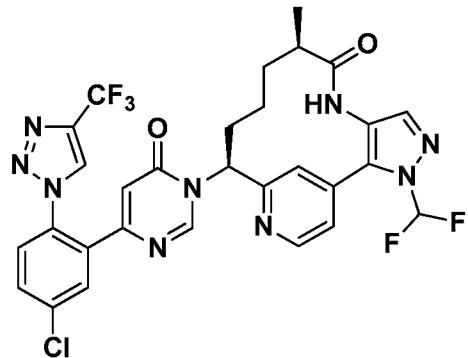

(9*R*,13*S*)-13-(4-{5-Chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl] phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate (11 mg, 30% yield) was prepared in a similar manner as the procedure described in Example 15, by replacing (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one with (9*R*,13*S*)-13-amino-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (15 mg, 0.050 mmol), prepared as described in Example 14. MS(ESI) *m/z*: 627.3 (M+H). <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.81 (s, 1H), 8.77 - 8.66 (m, 2H), 7.89 (d,  $J=2.2$  Hz, 1H), 7.79 - 7.64 (m, 3H), 7.59 - 7.51 (m, 1H), 7.49 (s, 1H), 6.44 (s, 1H), 5.97 (dd,  $J=12.4$ , 3.9 Hz, 1H), 2.76 - 2.62 (m,  $J=6.5$ , 3.4, 3.4 Hz, 1H), 2.34 - 2.21 (m, 1H), 2.12 - 1.94 (m, 2H), 1.68 - 1.53 (m, 1H), 1.51 - 1.39 (m, 1H), 1.00 (d,  $J=6.8$  Hz, 3H), 0.78 - 0.63 (m, 1H).

20 Analytical HPLC (Method A): RT = 8.64 min, purity = 99.4%.

25

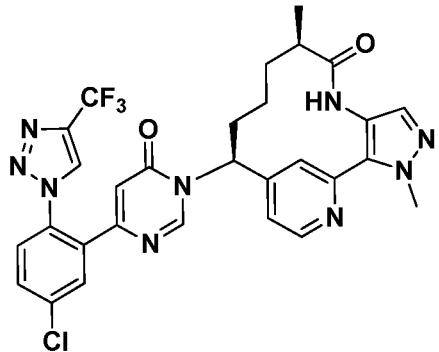

Example 17. Preparation of (9*R*,13*S*)-13-(4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3-(difluoromethyl)-9-methyl-

3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

15 Example 19. Preparation of (9*R*,13*S*)-13-(4-{5-chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate

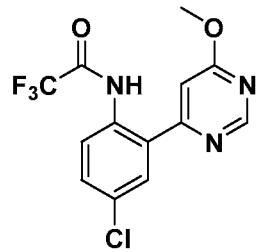

(9*R*,13*S*)-13-(4-{5-Chloro-2-[4-(trifluoromethyl)-1*H*-1,2,3-triazol-1-yl]phenyl}-6-oxo-1,6-dihydropyrimidin-1-yl)-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-methyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one trifluoroacetate (11.7 mg, 23%), an off-white solid, was prepared in the same manner as Example 10, replacing 6-[5-chloro-2-(4-chloro-1*H*-1,2,3-triazol-1-yl)phenyl]pyrimidin-4-ol, prepared as described in Example 6, with 6-{5-chloro-2-[4-(trifluoromethyl)-1*H*-pyrazol-1-yl]phenyl}pyrimidin-4-ol, prepared as described in Example 12B. Also, (9*R*,13*S*)-13-amino-3,9-dimethyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one, prepared as described in Example 9 was replaced with (9*R*,13*S*)-13-amino-3-(<sup>2</sup>H<sub>3</sub>)methyl-9-

methyl-3,4,7,17-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one, prepared as described in Example 6F. MS(ESI) *m/z*: 627.3(M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.86 - 8.82 (m, 1H), 8.75 - 8.69 (m, 1H), 8.28 (s, 1H), 7.94 - 7.87 (m, 1H), 7.86 (s, 1H), 7.80 - 7.76 (m, 1H), 7.74 - 7.69 (m, 1H), 7.51 (s, 1H), 7.20 - 7.09 (m, 1H), 5 6.56 - 6.51 (m, 1H), 5.77 (dd, *J*=12.5, 3.3 Hz, 1H), 2.67 - 2.58 (m, 1H), 2.47 - 2.37 (m, 2H), 2.19 - 2.06 (m, 1H), 2.03 - 1.96 (m, 1H), 1.73 - 1.60 (m, 1H), 1.48 - 1.31 (m, 2H), 1.14 (d, *J*=6.8 Hz, 3H). Analytical HPLC (Method A) RT = 8.02 min, purity = 96%.

Example 20. Preparation of 1-(4-chloro-2-(1-((5R,9S)-21,5-dimethyl-4-oxo-21H-3-aza-10 1(2,4)-pyridina-2(5,4)-pyrazolacyclonaphane-9-yl)-6-oxo-1,6-dihdropyrimidin-4-yl)phenyl)-1H-1,2,3-triazole-4-carboxylic acid trifluoroacetate

20A. Preparation of N-(4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl)-2,2,2-trifluoroacetamide

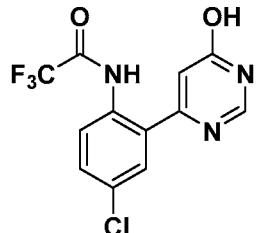

TEA (0.371 ml, 2.66 mmol) was added to a solution of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (0.523 g, 2.219 mmol), prepared as described in Example 6B, and trifluoroacetic anhydride (0.376 ml, 2.66 mmol) in DCM (17.47 ml). After 1 h, 20 the reaction mixture was concentrated and purified by normal phase chromatography to give N-(4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl)-2,2,2-trifluoroacetamide (0.684 g, 93% yield) as a white solid. MS(ESI) *m/z*: 332.1 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>-d)

$\delta$  13.95 (br. s., 1H), 8.83 (d,  $J$ =1.1 Hz, 1H), 8.59 (d,  $J$ =9.0 Hz, 1H), 7.76 (d,  $J$ =2.4 Hz, 1H), 7.49 (dd,  $J$ =9.0, 2.4 Hz, 1H), 7.16 (d,  $J$ =0.9 Hz, 1H), 4.09 (s, 3H).

20B. Preparation of N-(4-chloro-2-(6-hydroxypyrimidin-4-yl)phenyl)-2,2,2-

5 trifluoroacetamide

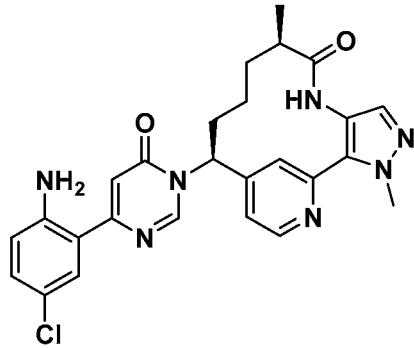

48% HBr in H<sub>2</sub>O (1.693 ml, 14.97 mmol) was added to a stirring solution of N-(4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl)-2,2,2-trifluoroacetamide (0.68 g, 2.05 mmol) in THF (13.67 ml) at 60 °C. After 3 h, the reaction mixture was concentrated, quenched with saturated NaHCO<sub>3</sub> (40 ml), and extracted with EtOAc (3 x 30 ml). The combined organic layers were washed with brine (15 mL) and dried (MgSO<sub>4</sub>). The residue was purified by normal phase chromatography to give the desired product (0.195 g, 30%).

10 MS(ESI) *m/z*: 318.1 (M+H)<sup>+</sup>. <sup>1</sup>H NMR: (400MHz, CDCl<sub>3</sub>-d)  $\delta$  8.50 (d,  $J$ =9.0 Hz, 1H), 8.27 (s, 1H), 7.66 (d,  $J$ =2.4 Hz, 1H), 7.57 - 7.49 (m, 1H), 6.89 (s, 1H).

15

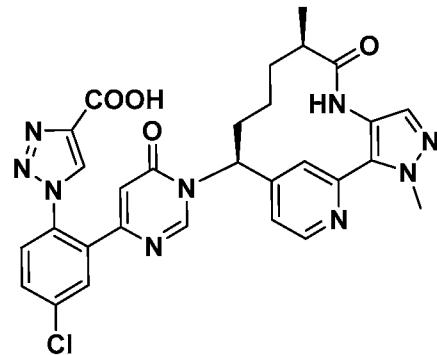

20C. Preparation of (5R,9S)-9-(4-(2-amino-5-chlorophenyl)-6-oxopyrimidin-1(6H)-yl)-21,5-dimethyl-21H-3-aza-1(2,4)-pyridina-2(5,4)-pyrazolacyclonaphan-4-one

To a 1-dram vial containing a white suspension of N-(4-chloro-2-(6-hydroxypyrimidin-4-yl)phenyl)-2,2,2-trifluoroacetamide (0.035 g, 0.110 mmol) and HATU (0.054 g, 0.143 mmol) in ACN (1.10 ml) was added DBU (0.025 ml, 0.165 mmol). After 10 min, a purple solution of Example 9 (0.033 g, 0.110 mmol) in DMF (1.102 ml) was added. After stirring overnight, the reaction was diluted with water,

extracted with EtOAc (3x), organics washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated. The crude product was purified by normal phase chromatography to give the desired intermediate as a yellow film (30% undesired isomer also observed in <sup>1</sup>H NMR). The material was carried forward to subsequent reactions. The 5 trifluoroacetamide group was removed by dissolving the compound in MeOH (2 ml), treatment with HCl (1 ml), and heating to 75 °C. After 2 h, the organics were removed and the aqueous layer freeze dried. The HCl salt was neutralized by dissolving the residue in MeOH and passing through two successive NaHCO<sub>3</sub> cartridges (500mg) and filtrate concentrated to give the desired product (0.040 g, 0.079 mmol, 72.0% yield) as a 10 yellow film. MS(ESI) *m/z*: 504.3 (M+H)<sup>+</sup>.

20D. Preparation of 1-(4-chloro-2-(1-((5R,9S)-21,5-dimethyl-4-oxo-21H-3-aza-1(2,4)-pyridina-2(5,4)-pyrazolacyclonaphane-9-yl)-6-oxo-1,6-dihdropyrimidin-4-yl)phenyl)-1H-1,2,3-triazole-4-carboxylic acid trifluoroacetate

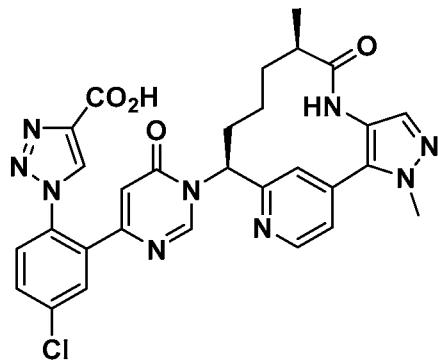

15

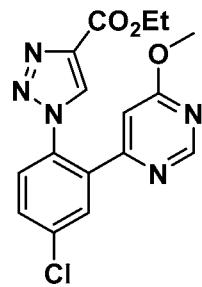

To a yellow solution of 20C (0.040 g, 0.079 mmol) in ACN (1.134 ml) at 0 °C was added isoamyl nitrite (0.032 ml, 0.238 mmol) in ACN (0.25 ml), followed by azidotrimethylsilane (0.031 ml, 0.238 mmol) ACN (0.25 ml), dropwise. After 10 min, the cold bath was removed, and the reaction allowed to warm to rt. After 1 h, *tert*-butyl propiolate (0.050 g, 0.397 mmol) ACN (0.25 ml), and Cu<sub>2</sub>O (1.136 mg, 7.94 µmol) were 20 added at rt. After 6 h, the reaction was diluted with DCM and washed with sat. NH<sub>4</sub>Cl, brine, dried over MgSO<sub>4</sub>, filtered and concentrated to give a yellow oil. The crude material was purified by normal phase chromatography to give the desired intermediate as a yellow film. The *t*-butyl ester was hydrolyzed by treatment with 50%/TFA/DCM. 25 After 1 h, the reaction mixture was concentrated, purified by reverse phase chromatography, and freeze dried to give the desired product (15 mg, 25%). This material was subjected to chiral purification to remove any remaining residual undesired

isomer. The title compound was the early eluting isomer after chiral HPLC separation using CHIRALPAK® IC, 21 x 250mm ID, 5  $\mu$ , using 40% MeOH:ACN:FA / 60% CO<sub>2</sub> at 45.0 mL/min, 100 bar, and 40 °C. MS(ESI) *m/z*: 600.3(M+H)<sup>+</sup>. <sup>1</sup>H NMR: (400MHz, ACN-d<sub>3</sub>) d 8.66 (d, J=5.1 Hz, 1H), 8.41 (s, 1H), 8.07 (s, 1H), 7.83 - 7.77 (m, 2H), 7.73 - 7.66 (m, 2H), 7.65 - 7.61 (m, 1H), 7.37 (s, 1H), 6.99 (d, J=4.2 Hz, 1H), 6.39 (s, 1H), 5.66 - 5.61 (m, 1H), 4.12 (s, 3H), 2.52 (br. s., 1H), 2.25 - 2.19 (m, 1H), 2.07 - 2.01 (m, 1H), 1.54 (dd, J=13.4, 5.5 Hz, 1H), 1.31 (d, J=7.9 Hz, 1H), 1.19 - 1.14 (m, 1H), 1.05 (d, J=6.8 Hz, 3H). Analytical HPLC (Method A) RT = 5.31 min, purity > 95%.

- 10 Example 21. Preparation of 1-(4-chloro-2-{1-[*(9R,13S)*-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylic acid trifluoroacetate

- 15 21A. Preparation of ethyl 1-[4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl]-1*H*-1,2,3-triazole-4-carboxylate

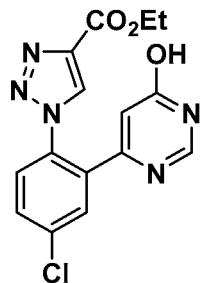

To a cooled (0 °C) clear, yellow solution of 4-chloro-2-(6-methoxypyrimidin-4-yl)aniline (0.400 g, 1.70 mmol), prepared as described in Example 4B, in CH<sub>3</sub>CN (24.2 mL) was added isoamyl nitrite (0.34 mL, 2.55 mmol), followed by the dropwise addition of azidotrimethylsilane (0.34 mL, 2.55 mmol). Gas evolution was observed. After 10 min, the cold bath was removed and the reaction was allowed to warm to rt and stir at rt for 1

h. A yellow suspension formed. Next, ethyl propiolate (0.500 g, 5.09 mmol) and Cu<sub>2</sub>O (0.024 g, 0.17 mmol) were added. After 1 h, the cloudy greenish reaction was diluted with DCM and washed with saturated aqueous NH<sub>4</sub>Cl, brine, dried over MgSO<sub>4</sub>, filtered and concentrated to give a yellow oil. Purification by normal phase chromatography gave 5 ethyl 1-[4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl]-1H-1,2,3-triazole-4-carboxylate (0.507 g, 83% yield) as a yellow solid. MS(ESI) *m/z*: 360.0 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.65 (d, *J*=1.1 Hz, 1H), 8.19 (s, 1H), 7.75 (d, *J*=2.4 Hz, 1H), 7.62 (dd, *J*=8.4, 2.4 Hz, 1H), 7.50 (d, *J*=8.4 Hz, 1H), 6.56 (d, *J*=1.1 Hz, 1H), 4.44 (q, *J*=7.3 Hz, 2H), 3.96 (s, 3H), 1.42 (t, *J*=7.2 Hz, 3H).

10

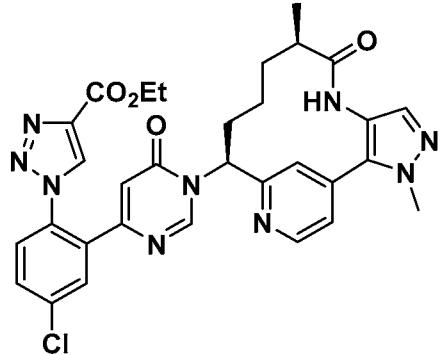

21B. Preparation of ethyl 1-[4-chloro-2-(6-hydroxypyrimidin-4-yl)phenyl]-1H-1,2,3-triazole-4-carboxylate

To a suspension of ethyl 1-[4-chloro-2-(6-methoxypyrimidin-4-yl)phenyl]-1H-15 1,2,3-triazole-4-carboxylate (0.200 g, 0.56 mmol) in CH<sub>3</sub>CN (3 mL) was added TMS-I (0.38 mL, 2.78 mmol). The resulting clear yellow solution was heated at 50 °C over night. The reaction was cooled to rt and then it was poured into a mixture of 10% sodium thiosulfate and saturated aqueous NaHCO<sub>3</sub>. The reaction was extracted with DCM (3x). The organic layers were combined and concentrated. Purification by normal phase chromatography gave ethyl 1-[4-chloro-2-(6-hydroxypyrimidin-4-yl)phenyl]-1H-1,2,3-triazole-4-carboxylate (0.098 g, 51% yield) as a white solid. MS(ESI) *m/z*: 345.9 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.30 (s, 1H), 7.97 (d, *J*=1.1 Hz, 1H), 7.73 (d, *J*=2.2 Hz, 1H), 7.62 (dd, *J*=8.5, 2.3 Hz, 1H), 7.49 (d, *J*=8.4 Hz, 1H), 6.46 (d, *J*=0.9 Hz, 1H), 4.44 (q, *J*=7.3 Hz, 2H), 1.42 (t, *J*=7.2 Hz, 3H).

20  
25

21C. Preparation of ethyl 1-(4-chloro-2-{1-[*(9R,13S)*-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylate trifluoroacetate

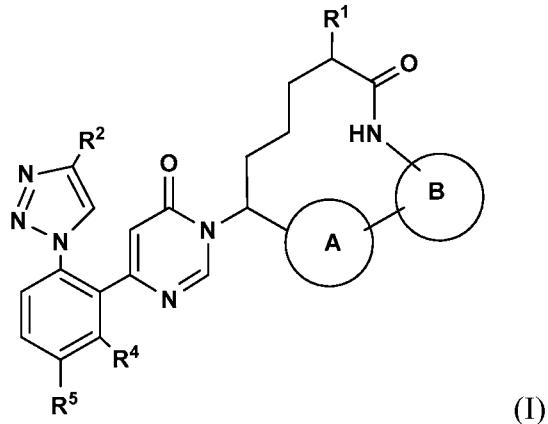

5 To a 1-dram vial containing a white suspension of ethyl 1-[4-chloro-2-(6-hydroxypyrimidin-4-yl)phenyl]-1*H*-1,2,3-triazole-4-carboxylate (0.035 g, 0.10 mmol) and HATU (0.050 g, 0.13 mmol) in CH<sub>3</sub>CN (1.0 mL) was added DBU (0.023 mL, 0.15 mmol). The resulting clear, yellow solution was stirred at rt for 20 min. Then a clear, purple solution of (*9R,13S*)-13-amino-3,9-dimethyl-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-8-one (0.030 g, 0.10 mmol), prepared as described in Example 13, in DMF (1.0 mL) was added. The reaction was stirred at rt. After 3 h, the reaction was stopped purified directly by reverse phase chromatography which gave, after concentration and lyophilization, ethyl 1-(4-chloro-2-{1-[*(9R,13S)*-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylate, trifluoroacetate (0.0292 g, 39% yield) as an off-white solid. MS(ESI) *m/z*: 628.4 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500 MHz, CD<sub>3</sub>OD) δ 8.81 (s, 1H), 8.78 (s, 1H), 8.70 (d, *J*=5.2 Hz, 1H), 7.89 (d, *J*=2.5 Hz, 1H), 7.74 (dd, *J*=8.5, 2.5 Hz, 1H), 7.70 - 7.65 (m, 2H), 7.52 (dd, *J*=5.0, 1.7 Hz, 1H), 7.49 (s, 1H), 6.39 (s, 1H), 5.99 - 5.93 (m, 1H), 4.40 (q, *J*=7.2 Hz, 2H), 4.05 (s, 3H), 2.74 - 2.66 (m, 1H), 2.32 - 2.23 (m, 1H), 2.11 - 1.93 (m, 2H), 1.64 - 1.54 (m, 1H), 1.50 - 1.41 (m, 1H), 1.38 (t, *J*=7.2 Hz, 3H), 1.00 (d, *J*=6.9 Hz, 3H), 0.73 - 0.61 (m, 1H). Analytical HPLC (Method A) RT = 4.90 min, purity = 98.8%.

21D. Preparation of 1-(4-chloro-2-{1-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylic acid trifluoroacetate

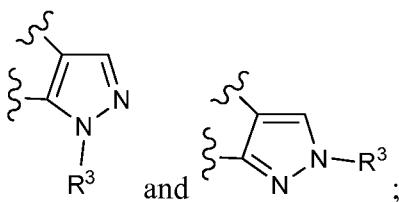

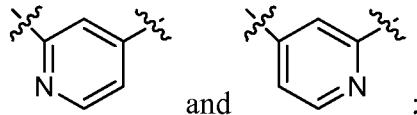

A clear, colorless solution of ethyl 1-(4-chloro-2-{1-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylate trifluoroacetate (0.020 g, 0.027 mmol) in MeOH (0.54 mL) and 1.0 M NaOH (0.14 mL, 0.14 mmol) was stirred at rt. After 2 h the reaction was stopped, neutralized with 1.0 M HCl and then the reaction was concentrated to give a white solid. Purification by reverse phase chromatography gave, after concentration and lyophilization, 1-(4-chloro-2-{1-[(9*R*,13*S*)-3,9-dimethyl-8-oxo-3,4,7,15-tetraazatricyclo[12.3.1.0<sup>2,6</sup>]octadeca-1(18),2(6),4,14,16-pentaen-13-yl]-6-oxo-1,6-dihydropyrimidin-4-yl}phenyl)-1*H*-1,2,3-triazole-4-carboxylic acid, trifluoroacetate (0.0126 g, 64% yield) as a white solid. MS(ESI) *m/z*: 600.3 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (500 MHz, CD<sub>3</sub>OD) δ 8.78 (s, 1H), 8.73 (s, 1H), 8.71 (d, *J*=5.2 Hz, 1H), 7.89 (d, *J*=2.2 Hz, 1H), 7.76 - 7.73 (m, 1H), 7.70 - 7.66 (m, 2H), 7.50 (dd, *J*=5.1, 1.5 Hz, 1H), 7.49 (s, 1H), 6.40 (s, 1H), 6.00 - 5.94 (m, 1H), 4.05 (s, 3H), 2.74 - 2.66 (m, 1H), 2.32 - 2.23 (m, 1H), 2.11 - 1.93 (m, 2H), 1.64 - 1.54 (m, 1H), 1.51 - 1.40 (m, 1H), 1.00 (d, *J*=6.9 Hz, 3H), 0.73 - 0.61 (m, 1H). Analytical HPLC (Method A) RT = 3.37 min, purity = 100%.

## WHAT IS CLAIMED IS:

1. A compound of Formula (I):

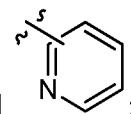

5 or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof, wherein:

R<sup>1</sup> is independently selected from H and C<sub>1-4</sub> alkyl;

R<sup>2</sup> is independently selected from H, F, Cl, CF<sub>3</sub>, CHF<sub>2</sub>, and COOH;

10 R<sup>3</sup> is independently selected from H, CHF<sub>2</sub>, CD<sub>3</sub>, CH<sub>3</sub>, and

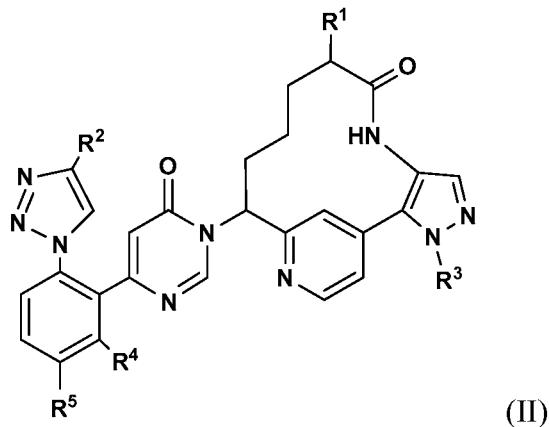

R<sup>4</sup> is independently selected from H and F; and

R<sup>5</sup> is independently selected from H, F, Cl, CH<sub>3</sub>, and OCH<sub>3</sub>.

2. A compound according to claim 1, wherein R<sup>2</sup> is independently selected

15 from F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>.

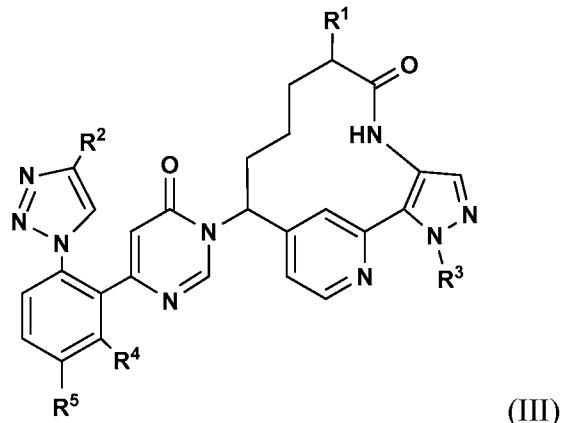

3. The compound of any one of claims 1 to 2, having Formula (II):

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof, wherein:

- $R^1$  is  $C_{1-4}$  alkyl;
- 5       $R^2$  is independently selected from H, F, Cl,  $CF_3$ , and  $CHF_2$ ;
- $R^3$  is independently selected from  $CHF_2$ ,  $CD_3$ , and  $CH_3$ ;
- $R^4$  is H; and
- $R^5$  is independently selected from F and Cl.

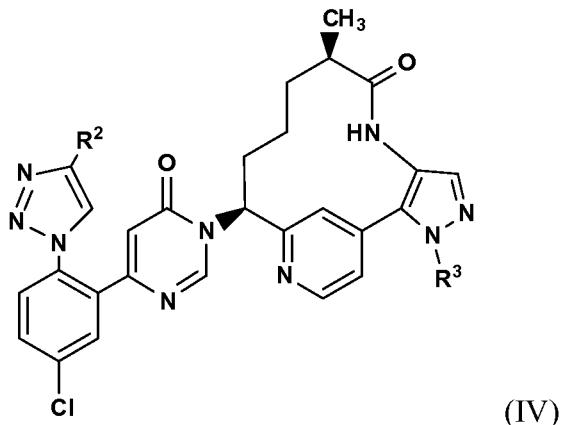

10     4. The compound of any one of claims 1 to 3, having Formula (III):

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof, wherein:

- $R^1$  is  $C_{1-4}$  alkyl;
- 15     $R^2$  is independently selected from H, F, Cl,  $CF_3$ , and  $CHF_2$ ;
- $R^3$  is independently selected from  $CHF_2$ ,  $CD_3$ , and  $CH_3$ ;
- $R^4$  is H; and
- $R^5$  is independently selected from F and Cl.

5. The compound of anyone of claims 1 to 4, having Formula (IV):

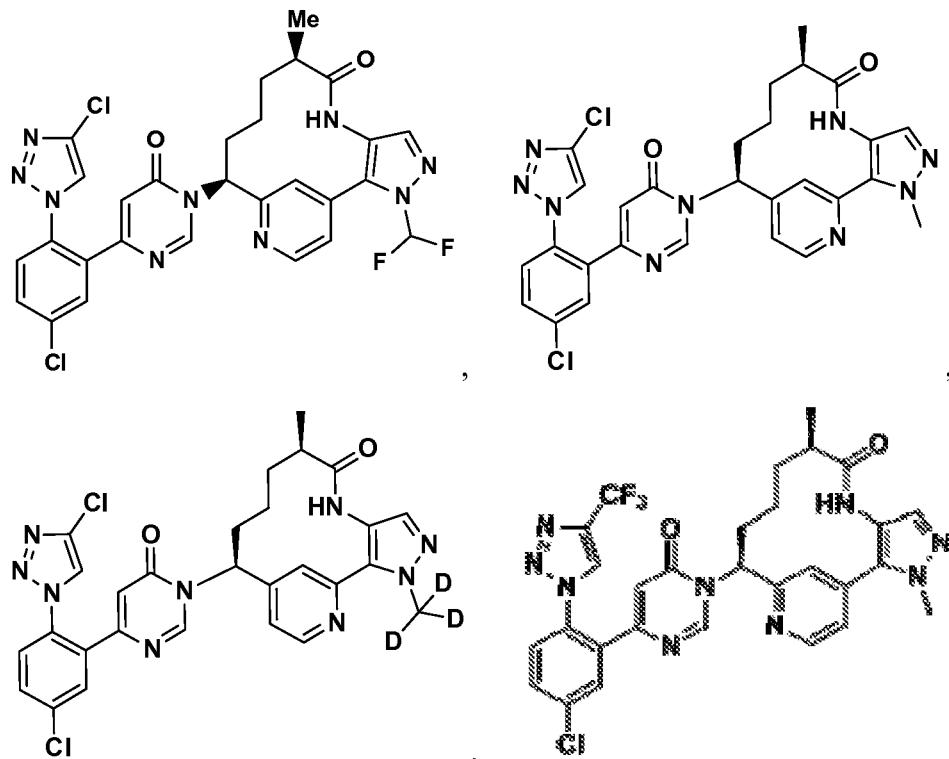

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof, wherein:

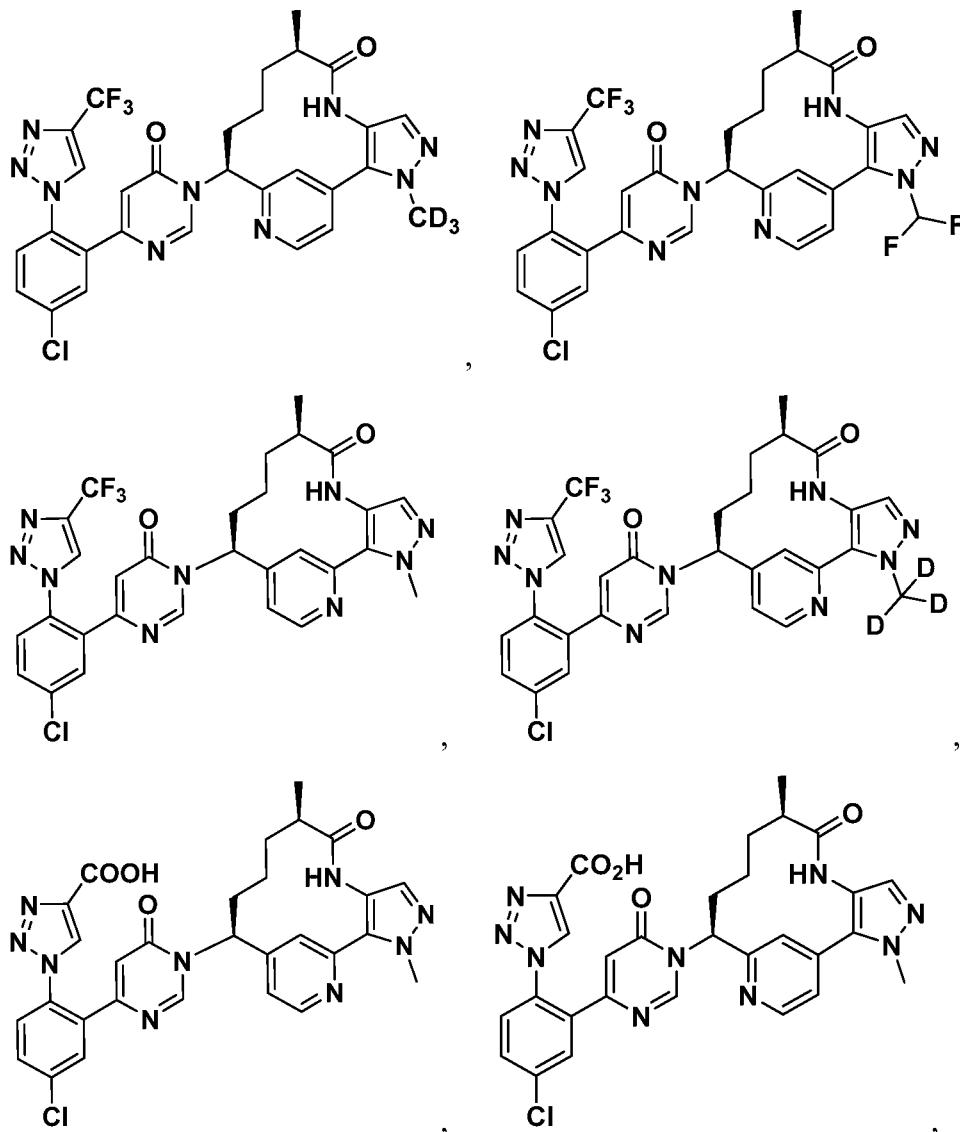

R<sup>2</sup> is independently selected from F, Cl, CF<sub>3</sub>, and CHF<sub>2</sub>; and

5 R<sup>3</sup> is independently selected from CHF<sub>2</sub>, CD<sub>3</sub>, and CH<sub>3</sub>.

6. A compound of any one of claims 1 to 5, selected from the group consisting of:

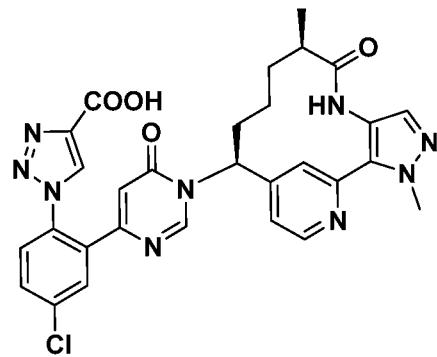

10

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof.

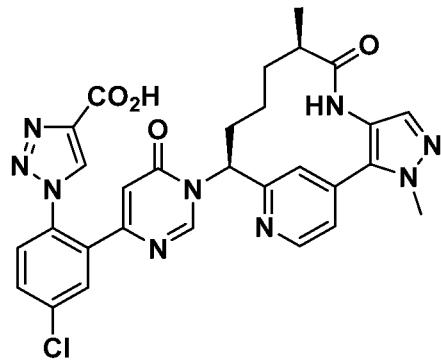

5

7. A compound having the structure:

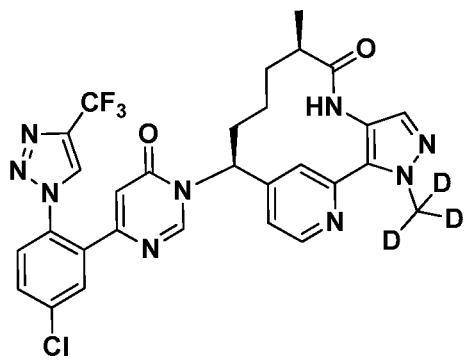

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof.

8. A compound having the structure:

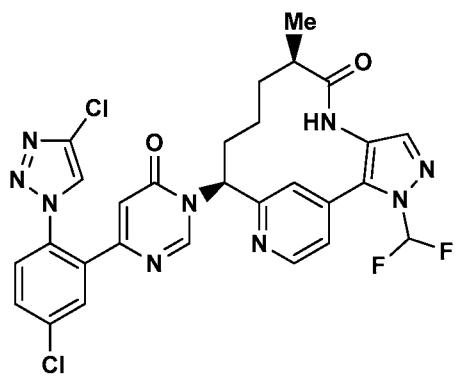

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof.

5 9. A compound having the structure:

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof.

10. A compound of having the structure:

10

or a stereoisomer, a tautomer, a pharmaceutically acceptable salt thereof.

11. A pharmaceutical composition comprising one or more compounds according to any one of claims 1-10 and a pharmaceutically acceptable carrier or diluent.

12. A method for the treatment and/or prophylaxis of a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount of a compound of any one of claims 1-10, or a stereoisomer, a tautomer, 5 or a pharmaceutically acceptable salt thereof, wherein the thromboembolic disorder is selected from arterial cardiovascular thromboembolic disorders, venous cardiovascular thromboembolic disorders, and thromboembolic disorders in the chambers of the heart or in the peripheral circulation.
- 10 13. A method according to claim 12, wherein the thromboembolic disorder is selected from unstable angina, an acute coronary syndrome, atrial fibrillation, myocardial infarction, transient ischemic attack, stroke, atherosclerosis, peripheral occlusive arterial disease, venous thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary arterial thrombosis, cerebral arterial thrombosis, cerebral embolism, kidney 15 embolism, pulmonary embolism, and thrombosis resulting from medical implants, devices, or procedures in which blood is exposed to an artificial surface that promotes thrombosis.
- 20 14. Use of a compound or composition according to any one of claims 1-11, or a stereoisomer, a tautomer, or a pharmaceutically acceptable salt thereof as a medicament.
- 25 15. Use of a compound or composition according to any one of claims 1-11, or a stereoisomer, a tautomer, or a pharmaceutically acceptable salt thereof for the treatment of a thromboembolic disorder.
